CURRICULUM VITAE

Education:

·Brooklyn Law School - Juris Doctorate 1996

Moot Court Honor Society - Vice President/Executive Board (Chair of Trial Division) Moot Court Honor Society - Competitor - National Appellate Trademark Competition Moot Court Honor Society – Coach, National Trial Team – Regional Champions CALI Excellence for the Future Award - Advanced Legal Research Judge Edward and Doris A. Thompson Award for Excellence in Trial Advocacy

'Tulane University, New Orleans, LA - Bachelor of Arts (Honors, Psychology) 1993

Professional:

• Smiley & Smiley, LLP

Managing Partner & Senior Trial Attorney, January 2001 - present Associate, June 1996 - December 2000 Law Clerk, September 1993 - June 1996 Major verdicts and settlements in plaintiffs' personal injury, medical malpractice and wrongful death litigation

· Adjunct Clinical Instructor of Law - Brooklyn Law School, Trial Advocacy Program (1998-2004)

- The Mentor Esq. Podcast A Podcast for Lawyers
 - Founder & Host (2019 Present)
- New York "Super Lawyer"
 2010, 2011,2012, 2013, 2014, 2015, 2016, 2017, 2018, 2019, 2020, 2021, 2022, 2023, 2024, 2025

Bar Admissions:

- The United States Supreme Court
- New York State Courts
- United States Eastern District, Southern District & Northern District of New York
- United States District Court of Vermont

Organizations/Affiliations:

·New York State Academy of Trial Lawyers

- -President (May 2017 May 2018)
- -President-Elect (April 2016- May 2017)
- -Vice President 1st Dept. (July 2013-May 2016)
- -Executive Committee (May 2019 present)
- Board of Directors (2013- present)
- Judicial Screening Committee (2013- present)
- Master CLE Instructor (2020 present)
- CLE Instructor (2013 present)

·New York City Trial Lawyers Alliance

-Chairman of Board of Governors (July 2017 – July 2019)

-President (July 2015 – July 2017)

-Vice President (June 2013 – July 2015)

-Treasurer (June 2011 – June 2013)

-Secretary (June 2009- June 2011)

-Board of Directors (2000-present)

• Judicial Screening Committee, Kings County Democratic Party (2013)

James Ughetta, Esq. The Centre at Purchase 4 Manhattanville Road, Suite 202 Purchase, NY 10577

Subject:	Nicolosi v BRG
File No.:	20170037

Dear Mr. Ughetta:

In accordance with your request, Guidance Engineering and Applied Research analyzed from a biomechanical engineering perspective Stella Nicolosi's accident on March 12, 2015 that involved a BellFit Resistance Band.

Qualifications

I am a Principal and Biomechanical Engineer at Guidance Engineering and Applied Research. I specialize in biomechanical engineering, dynamic system analysis, and accident reconstruction. I investigate human injuries in accidents and product failures by using biomechanical engineering techniques that apply the principles of engineering to the human body. I have extensive experience with mechanical testing design and analysis. I have researched accidents and injury potential using volunteer studies, anthropomorphic test devices ("crash test dummies"), computational models of the human body, and statistical analyses.

I hold a Bachelors of Science in Mechanical Engineering from the University of Pennsylvania. I also have a Masters of Science and a Doctorate in Mechanical Engineering from the University of California, Berkeley, where I specialized in dynamic systems and biomechanics. I held the position of Adjunct Associate Professor of Clinical Physical Therapy in the Department of Biokinesiology and Physical Therapy at the University of Southern California (USC) from 2004 to 2009. I am currently an Affiliate Scientist in the Applied Biomechanics Laboratory at the University of Washington (UW). At UC Berkeley, USC, and UW, my research activities included biomechanical engineering analysis, modeling, and testing related to human injury.

I serve on the Board of Directors for ASTM International and for the Safety Equipment Institute. I am a USA delegate on the International Standards Organization committee TC83/SC4, president of the International Society for Skiing Safety, chairman of ASTM F27 on Snow Skiing and Snowboarding and, the subcommittee chair for ASTM F27.60 for Research and Statistics. My current curriculum vita, testimony list for the past four years, and fee schedule are attached to this report as Attachments A, B, and C.

Information Received

A list of the materials that have been received and reviewed is provided in Attachment D.

Accident Summary

According to the Plaintiff's response to interrogatories, Ms. Nicolosi purchased the subject resistance band at Modell's in Brooklyn, NY on March 20, 2012, and first used the resistance band on March 12, 2015 (the date of the subject accident). Ms. Nicolosi was using the band as shown on its box; she was stepping on the band while holding a handle in each hand. After a minute or two, the band came out from under her foot and the hard-plastic ball attached to the band struck her right eye. As a result, Ms. Nicolosi's right eye sustained a total and permanent loss of vision, traumatic maculopathy, recurrent hyphema necessitating paracentesis, and a corneal abrasion.

Ms. Nicolosi claimed that the "hard plastic ball" should not be attached to the band and that the instructions should have a warning that the ball could cause injury and should be removed before engaging in exercises shown on the box.

Ms. Nicolosi had no prior injury to her right eye but was legally blind in her left eye before the subject accident.

Deposition Summary of Stella Nicolosi

According to the deposition testimony of Ms. Nicolosi, she purchased the subject resistance band at Modell's in 2012. While at the store, she did not inquire about instructions or safety information for the resistance band. Prior to purchasing the subject resistance band, she had once used briefly her trainer's band at the gym; his band had handles but did not have a ball. Her trainer had set up the band, she stepped on the band with one foot, and was able to stretch and pull it up. Her trainer did not give her any safety instructions or warnings about using the band.

Ms. Nicolosi kept the subject resistance band packaged in its box in her workout bag and first removed it from its box on the day of her accident. The band came with a ball and a manual. In the manual, she learned the ball was intended to be hooked on a door knob; she did not use any exercises using the door anchor ball. She wanted to remove the door anchor ball before performing exercises, but did not know how to remove it and could not find instructions in the manual about how to remove the ball. Ms. Nicolosi wanted to do bicep curls with the band and testified she reviewed the manual before performing exercises. When attempting her first bicep curl with the band, Ms. Nicolosi stepped on the anchor ball, pulled up on the handles, and the anchor ball slipped out and "smashed" her eye.

Ms. Nicolosi was standing with her right foot in front and her back leg bent; she did not recall if she was leaning forward or if her forward leg was bent. She was standing firmly on the door anchor ball, with the door anchor ball under the middle of the ball of her right foot. She testified that she did not step on the tubing and that the band felt like it was securely under her foot when she stepped on the ball. She did not recall how far she pulled up on the handles, but did not think she touched

her shoulders. She did not lift her foot off the ground and was looking up, when the ball slipped out from the front of her foot. She did not see the door anchor ball when it slipped out or before it contacted her eye. At the time of her accident, Ms. Nicolosi was on the tile floor of her apartment's hallway and was wearing Nike sneakers and workout clothes.

The door anchor ball struck "dead center" in her right eye; no other part of the band came in contact with her eye and the band did not snap her arm. When the ball contacted her eye, she was still standing straight up and looking straight ahead. Ms. Nicolosi testified that as a result of the accident, she now only has a little bit of peripheral vision that is blurry and cloudy in her right eye.

At the time of the accident, Ms. Nicolosi was 5 feet tall, 115 pounds, and wore a size 7 shoe. Prior to her accident, she was blind in her left eye and only needed reading glasses for her right eye. She competed in Women's Figure competitions in 2004, 2007 and 2009/2010.

Deposition Summary of Thom Parks

According to the deposition testimony of Mr. Parks, he was the vice president of corporate affairs at Bell Sports and was involved with safety, warnings, instructions, and testing of the BellFit Resistance Band line.

Mr. Parks testified that the BellFit Resistance Band evolved from when it first came on the market in 2009 or 2010 and when the line was sold to Bollinger Sports in 2012. In the first-generation bands, the door anchor was made of a hollow wooden ball enclosed in nylon webbing. Around 2009 to 2010, he became aware of injuries from door anchors that released from doors and one or two instances of first generation door anchors breaking. Instead of removing the door anchors that customers had come to expect, they looked at a variety of ways to make door anchors; the lightweight plastic ball performed the best and offered little threat to the consumer when used properly. For the second-generation bands, the door anchor ball was made of tough, lightweight plastic, its diameter increased from ³/₄-inch to 1- or 1¹/₄-inches, and it was exposed (that is, not enclosed in the nylon webbing). Mr. Parks was unaware of any second-generation door anchors breaking. They also added a warning to wear safety glasses in 2009 after injuries occurred when customers did not use the door anchor properly.

Throughout their evolution, the BellFit resistance bands were tested at the factory, by people in the Hong Kong office, and by himself. A similar product marketed under the Embark brand (supplied by Bell exclusively to Target Company) was also tested at Bureau Veritas. Target chose to conduct a voluntary recall of the Embark brand of resistance bands. Mr. Parks spoke with the CPSC and found that they were under no obligation to do the same. He felt that the product was safe if it was used according to the instructions or with common sense. Also, the injury rate was extremely low.

The manual provided instructions to place the tubing under the arch of the foot to ensure the band is secure and does not fly back when tensioned. All the illustrations clearly show that the door anchor ball is not under the foot when doing underfoot exercises. He never considered adding to the manual that one should remove the door anchor before doing underfoot exercises. They never

had an allegation of an injury from the door anchor when someone stepped on the door anchor attachment. Also, there were no instructions on how to remove the door anchor because it is common sense. He never heard of any customers or testers having difficulty removing the door anchor from the band.

Deposition Summary of Steven Tipton, Ph.D., P.E.

According to the deposition testimony of Dr. Tipton, Mr. Friedman gave him an exemplar resistance band identical to the subject resistance band; the band, instructions, and packaging were identical. He measured the anchor ball to be 1.1 inches and weigh 0.7 ounces. Dr. Tipton conducted static testing with a handheld load cell to collect force versus deflection data as he stretched the exemplar cord in 1 foot increments up to 6 feet.

Dr. Tipton believed Ms. Nicolosi was using the product as intended and the resistance band did not break in the subject accident. The ball came out from under her foot because the band was exerting a force on the ball that was greater than the frictional forces that were keeping the ball in place. Because Ms. Nicolosi was on tile, the frictional force between the anchor ball and floor was lower than if she had been on carpet or a workout mat.

Dr. Tipton used his static testing data to calculate the velocity of the anchor ball to be 97 miles per hour in Ms. Nicolosi's accident. Dr. Tipton based his speed calculation on Ms. Nicolosi's height of 5 feet and he assumed her hands came up to her chin. He testified the resistance band was stretched about 19 inches but 12 inches of stretch would be adequate to cause Ms. Nicolosi's injury. He did not calculate the force applied by the ball to Ms. Nicolosi's face at impact. Dr. Tipton did not know Ms. Nicolosi's exact injury, if the band struck her eye, or whether the band could have created her injury. Dr. Tipton testified that if the tubing hit Ms. Nicolosi's eye, it could still produce an eye injury.

Dr. Tipton testified that he was not critical of the band, the handles or the nylon strap; he was only critical of the hard, polypropylene ball used as a door anchor. He opined that foam donut shaped door anchors would have been a reasonable door anchor design; they had been used for a three-year period with no reported injuries. Dr. Tipton also came up with his own design that consisted of a piece of PVC pipe inserted into a red foam ball. He did not do any testing to determine the effects of exposure to UV, chemicals, water, or sweat on the materials he used. He also did not evaluate the force of the red ball on the eye if someone stretched the band 19 inches and whether it could create an eye injury.

Dr. Tipton did not believe removing the door anchor was obvious or simple and stated "there's a trick to it." While there was an easy way to remove the door anchor ball, he believed that it was only obvious after you know the trick and do it a few times.

Dr. Tipton had not taken any courses in biomechanics and was not provided with any medical records. He did not know to what extent Ms. Nicolosi's eye was damaged; he only knew that she is now blind. Dr. Tipton testified he does not know the forces necessary to cause eye injuries and is not familiar with the anatomy of the eye beyond "it is round." Dr. Tipton has previously analyzed

4 other eye injury cases (all involving the Embark resistance bands); none of them involved someone stepping on the ball.

Summary of Medical Records for Stella Nicolosi

On March 12, 2015, Ms. Nicolosi presented to the Emergency Department (ED) of Lutheran Medical Center with complaints of blurred vision and black floaters. Ms. Nicolosi stated she accidentally hit her right eye with the ball attached to the band she was using while working out. Ms. Nicolosi denied a complete loss of vision, weakness/headache, dizziness/lightheadedness, and unsteady gait. The review of symptoms noted eye pain, but no visual changes or discharge. The ED Physical note stated the right upper eye lid had soft tissue swelling and ecchymosis, there was subconjunctival hemorrhage at the outer eye area, and the right conjunctiva was infected. The diagnosis was right eye injury and Ms. Nicolosi was sent to the eye clinic.

The same day, Ms. Nicolosi was seen by Dr. Dessner at the eye clinic at Lutheran Medical Center. It was noted that the patient was status post high velocity blunt trauma to the right eye. The vision exam revealed Ms. Nicolosi was able to see hand motion with her right eye but had no light perception in her left eye. Upon examining the retina of the right eye, Dr. Dessner noted wrinkling, posterior vitreous detachment (PVD), and vitreous hemorrhage. Dr. Dessner also reported iridodialysis in the right eye, a corneal abrasion, and a posterior subcapsular cataract (PSC). The impression was commotio retinae with hyphema and iridodialysis of the right eye.

Ms. Nicolosi returned to Lutheran Medical Center on March 13, 2015 (the next day) and presented to Lekha Gopal, M.D., for follow up. The patient stated she was exercising when a plastic strap broke and a ball hit her in the right eye. The ophthalmology examination revealed subconjunctival hemorrhage and chemosis in her right eye, a blood clot and microhyphema in the anterior chamber of the right eye, a traumatic cataract of the lens in the right eye, a nuclear sclerotic cataract (NS) in the lens of the left eye, proptosis of the right eye, and a right eye lower lid laceration laterally. Of note, the cornea, pupil, and iris of both eyes were within normal limits. The biomicroscopy evaluation was normal in both eyes although it was noted there was no view of the fundi. Dr. Gopal's diagnosis was hyphema. Dr. Gopal referred Ms. Nicolosi to Richard Feig, MD.

Ms. Nicolosi presented to the office of Dr. Feig on March 13, 2015. It was stated that the patient was doing exercise and the resistance band snapped. Ms. Nicolosi had complaints of floaters in her right eye, swelling, soreness, cloudiness, and her visual acuity was black and white. Examination of the anterior portion of the eye revealed subconjunctival hemorrhage, a clot, and a subluxed lens. Upon examination of the posterior portion of the right eye, there was no retinal detachment, however there was no view of at the center of the retina. The diagnoses were hyphema and subluxed lens of the right eye after trauma with an exercise band. Ms. Nicolosi returned to Dr. Feig on March 16, 2015 for follow up and reported pain and decreased visual acuity. Again, subconjunctival hemorrhage and hyphema were noted.

According to the medical records provided by Dr. Feig, on March 18, 2015, a pars plana vitrectomy and intraocular lens placement were performed on Ms. Nicolosi's right eye that day. Dr. Feig's record dated March 24, 2015, reports Ms. Nicolosi had complaints of pain in her right eye and "all

of the right side" including a throbbing sensation and headaches. The tonometry exam measured an intraocular pressure of 42 and an 80% clot was noted to the anterior chamber of her right eye. The diagnosis was recurrent hyphema; the plan was to perform a paracentesis of the right eye and on March 25, 2015, a repeat washout was performed. On March 26, 2015, Ms. Nicolosi returned to Dr. Feig with complaints of pain. The tonometry reading was 40 in her right eye and a decision was made to perform paracentesis. The impression was recurrence of hyphema. On March 27, 2015, she followed up and stated her pain improved slightly.

On April 14, 2015, Ms. Nicolosi again returned to Dr. Feig's office for a follow up visit. She stated that she could not see in bright light and her visual acuity was better in "softer light" but was still very blurry. She described seeing a "lightning" that happens almost every day in her right eye. Examination of the retina revealed no vitreous hemorrhage or retinal detachment; it is unclear if the center of the retina was visualized.

The next record from Dr. Feig's office was dated May 7, 2015 and noted Ms. Nicolosi underwent a pars plana vitrectomy the day before on May 6, 2015. She did not have any complaints and the intraocular pressure was 15 for her right eye. Examination of her retina indicated she had a macular scar.

Prior to the subject accident in May 1996, Ms. Nicolosi was diagnosed with an intracranial olfactory meningioma, a left optic nerve glioma versus optic nerve sheath meningioma, and a tumor growing on the margin of her right lower lid between the medial and lateral third. Ms. Nicolosi's intracranial tumor was removed on June 14, 1996, but her optic nerve tumor remained untreated until her visual field was zero in the left eye. She underwent 27 treatments of radiosurgery for her left optic nerve tumor from June 21, 1999 through July 29, 1999, more than three years after being diagnosed.

Ms. Nicolosi's BellFit Resistance Band

Geometry of the Subject Resistance Band

On July 20, 2017, I inspected the subject resistance band used by Ms. Nicolosi at the time of her accident. The subject resistance band was provided to me in its box (see Figure 1) along with the instruction manual. The subject resistance band was a BellFit Classic Resistance Band with Padded Grips, size medium (15 lbs. weight equivalent). The padded grips attached to the tubular, elastic portion of the resistance band with webbing and polymer connectors. The diameter of the resistance band ranged from 0.43 to 0.47 inches along its length, the resistance band weighed 0.38 pounds (with the door anchor attached), and the door anchor weighed 0.045 pounds; see Figure 1 below. When unloaded, the subject resistance band was approximately 3 feet 10 inches long without handles and approximately 4 feet 11 inches with handles.

Figure 1. Box (*Top-Left*) for the subject BellFit Classic Resistance Band (*Top-Right*). (*Middle-Left*) Each end of the subject resistance band had a padded handle and webbing that attached to the main part of the band. (*Middle-Right*) The band diameter was approximately 0.43 to 0.47 inches. The resistance band and door anchor weighed 0.38 pounds (*Bottom-Left*) and the door anchor weighed 0.045 pounds (*Bottom-Right*).

The door anchor consisted of a polymer ball with webbing that passed through a hole in the ball; see Figure 2 below. The ball was approximately 1.37 inches in diameter and had two sides that were flat such that the distance between the two flat sides was approximately 1.16 inches. The webbing that was attached the door anchor ball created a loop that was approximately 2.51 inches in diameter; see Figure 2 below. The door anchor ball (with webbing) moved freely along the length of the resistance band and could be placed anywhere along its length. In addition, the padded handle with webbing (that was approximately 1.27 to 1.3 inches thick – see Figure 2) passed easily through the door anchor webbing loop (that was approximately 2.51 inches in diameter).

Figure 2. (*Top-Left*) Door anchor that included a polymer ball and webbing. (*Top-Right*) the door anchor ball was approximately 1.37 inches in diameter. (*Bottom-Left*) The door anchor webbing was approximately 2.51 inches in diameter. (*Bottom-Right*) The padded handle with webbing was approximately 1.27 to 1.3 inches thick and passed easily through the door anchor webbing loop.

Stiffness Testing of the Subject BellFit Resistance Band

I measured the stiffness characteristics of the subject resistance band during my July 20, 2017 inspection. To this end, the handles of the subject resistance band were placed around a fixed aluminum channel and the resistance band was stretched using the sole of a sneaker; see Figure 3 below. The magnitude of displacement (that is, the stretch of the resistance band) was measured using a string potentiometer (PA-50, Unimeasure, Corvallis, Oregon; Range: 50 inches; Resolution: 0.002 inches). The force required to stretch the resistance band was measured simultaneously using a load cell (WMC-500-460, Interface, Scottsdale, Arizona; Range: 500 pounds; Resolution: 0.015 pounds). The data were collected digitally at 6,000 Hz using a 16-bit data acquisition system with a 1,200 Hz anti-aliasing filter (Slice Nano, Diversified Technical Systems, Seal Beach, California). Multiple cycles of resistance band stretching were measured during my testing. The data were filtered digitally to remove noise using a 4-pole, low-pass, zero-phase shift, Butterworth filter with a 300 Hz cut-off frequency.

Figure 3. (*Top*) Setup for testing the stiffness characteristics of the subject resistance band. (*Bottom-Left*) The padded handles were placed around a fixed aluminum channel during testing and the displacement (or resistance band stretch) was measured using a string potentiometer (*yellow circle*). (*Bottom-Right*) The sole of a fitness shoe was used to apply a stretching force to the subject resistance band. The force required to stretch the resistance band was measured using a load cell (*orange circle*).

The data from the displacement and force measurements (see Figure 4) were used to determine the average stiffness of the resistance band. In the range of resistance band stretching for Ms. Nicolosi conducting curls (as described in her deposition), the average stiffness of the subject resistance band in its linear region was 0.6 pounds per inch of stretch (displacement).

Figure 4. Data from the displacement and force measurements of the subject resistance band.

Exemplar BellFit Resistance Band

Geometry of an Exemplar Resistance Band

After considerable effort, I found and purchased an exemplar resistance band that was similar to the one used by Ms. Nicolosi at the time of her accident. Like Ms. Nicolosi's resistance band, the exemplar resistance band was a BellFit Classic Resistance Band with Padded Grips, size medium (15 lbs. weight equivalent); see Figure 5 below. The diameter of the exemplar band ranged from 0.44 to 0.48 inches along its length, the band weighed 0.38 pounds (with the door anchor attached), and the door anchor weighed 0.05 pounds. When unloaded, the exemplar band was approximately 3 feet 10¹/₄ inches long without handles and approximately 4 feet 11 inches with handles. The dimensions of the exemplar band matched well the dimensions of Ms. Nicolosi's resistance band.

Figure 5. Box (*Top-Left*) for the exemplar BellFit Classic Resistance Band (*Top-Right*). (*Bottom-Left*) The exemplar resistance band diameter was approximately 0.44 to 0.48 inches. (*Bottom-Right*) The door anchor webbing was approximately 2.53 inches in diameter.

Stiffness Testing of the Exemplar BellFit Resistance Band

I measured the stiffness characteristics of the exemplar resistance band using the same equipment and test methods described in the *Stiffness Testing of the Subject BellFit Resistance Band* section above. The data from the displacement and force measurements (see Figure 6) were used to determine the average stiffness of the exemplar resistance band. In the range of resistance band stretch for Ms. Nicolosi conducting curls (as described in her deposition), the average stiffness of the exemplar resistance band in its linear region was 0.6 pounds per inch of stretch (displacement). In addition, the overall stiffness (force vs. displacement) characteristics of the exemplar band were substantially similar to the subject band used by Ms. Nicolosi (for example, see Figure 6 below).

20170037 – Nicolosi v BRG Sports August 22, 2017 Page 12

Figure 6. Data from the displacement and force measurements of the exemplar (*blue line*) and the subject resistance band (*yellow line*). The overall stiffness characteristics of the exemplar band were substantially similar to the subject band that was used by Ms. Nicolosi

Testing Setup for the Exemplar BellFit Resistance Band

Using a custom-built testing system, I measured the speed of the exemplar resistance band when it reached Ms. Nicolosi's eye height. The testing system consisted of a rigid, aluminum frame with an athletic shoe mounted near its base and two adjustable aluminum supports to hold the padded grips of the exemplar resistance band; see Figure 7. Based on Ms. Nicolosi's height, her testimony, and the body position demonstrated for arm curls in the BellFit resistance band manual, I estimated the general body configuration and determined the approximate distances between the floor and various parts of the body; see Figure 7 below. Ms. Nicolosi's elbows and hands were likely about 14 inches apart while performing the curl exercise; based on this, the aluminum supports of the testing system that held the padded grips were placed 14 inches apart. The height of the aluminum supports (and, therefore, the padded grips of the exemplar resistance band) ranged from 38 to 48 inches, representing approximately 90 degrees of elbow flexion to fully-flexed elbows, with the hands near shoulder level.

des deux côtés. Plier lentement les bras pour tirer les poignées jusqu'à la hauteur des épaules. Garder le dos légèrement cambré et

les genoux souples. Laisser les bras revenir lentement à leur position de départ.

Faire trois séries d'exercices de douze à quinze répétitions.

Figure 7. (Top Row) Testing frame used to measure the response of the exemplar BellFit resistance band. The frame included a red, athletic shoe mounted near the base and two aluminum supports used to hold rigidly the padded grips of the exemplar band. (Bottom-Left) Arm curl section of the BellFit manual (page 8) that describes and illustrates the arm curl exercise with the resistance band. (Bottom-Right) General body configuration and approximate distances between the floor and padded grips or eyes for a female of Ms. Nicolosi's height performing arm curls as shown in the BellFit manual.

For each test, the resistance band system was placed under the ball of the foot of the unweighted athletic shoe, the resistance band was released, and the unconstrained resistance band system moved upward; for testing without the door anchor, the front of the shoe was placed into slight dorsiflexion to allow the resistance band to slip forward. A high-speed camera (Phantom Miro LC230S, Vision Research Inc, Wayne, New Jersey) was used to record the motion of the resistance band system near the eye height level for a female individual of Ms. Nicolosi's size who is performing curls. The high-speed camera recorded 3,600 frames per second at a resolution of 1027 x 768. A photography flash was used to synchronize the video.

Using a scale in the video for distance, the high-speed video was examined to determine the time required for the resistance band system to move through the last 1 and 2 inches before reaching eye level. Using the time and distance data, the average speed of the resistance band just before reaching eye level was ascertained (resolution range: 2.7 to 3.4 miles per hour).

The effective mass of the resistance band system during contact was examined for each test. A rigid aluminum plate was placed at eye level and was mounted to a load cell (WMC-500-460, Interface, Scottsdale, Arizona; Range: 500 pounds; Resolution: 0.015 pounds). When the resistance band system reached eye height, the contact force on the rigid plate was measured¹. The data were collected digitally at 6,000 Hz using a 16-bit data acquisition system with a 1,200 Hz anti-aliasing filter (Slice Nano, Diversified Technical Systems, Seal Beach, California). The data were filtered digitally to remove noise using a 4-pole, low-pass, zero-phase shift, Butterworth filter with a 300 Hz cut-off frequency (that was chosen based on an analysis of residuals). Using the principle of impulse-momentum, the force, impulse time, and pre-impact velocity data were used to determine an effective mass of the resistance band system during contact.

Three resistance band and contact conditions were tested: (A) *No Door Anchor* – the door anchor was removed from the resistance band prior to these tests and the resistance band started under the ball of the foot region of the unweighted athletic shoe. The elastic tubing of the resistance band contacted the rigid plate in this test condition; (B) *Door Anchor* – the resistance band system was tested in a similar manner to the *No Door Anchor* condition, with the door anchor on the tubing portion of the band. The door anchor and the tubing contacted the rigid plate in this test condition; (C) *Door Anchor with Only Tubing Contact* – the resistance band system was tested in a similar manner to the *Door Anchor* condition with a smaller rigid plate that was moved slightly to one side. The door anchor did not contact the rigid plate in these tests, but the tubing of the resistance band did contact the rigid plate. In addition, the tests were conducted with the padded grips at various heights for each of the 3 test conditions. The heights corresponded to elbow flexions of approximately 90 degrees, 135 degrees, and full-flexion (towards 180 degrees) for a female individual of Ms. Nicolosi's size who is performing curls.

¹ By using a rigid plate, the properties of the resistance band system were isolated and the effective mass of the resistance band system could be determined.

For each test trial, the kinetic energy of the resistance band system was calculated using the effective mass specific to that test trial (described above). The kinetic energy for each impact was normalized using the projected area of the component making contact (this is called the Normalized Kinetic Energy). Because the exact length of the elastic resistance band that could contact the eye of a user was not known, a range of lengths between ¼ and 1 inch were used for determining the projected area of contact by the tubing of the resistance band. Using these data and the scientific literature on the likelihood of eye injuries from projectile contact, I calculated the likelihood of various injuries; see Figure 8 for an example of the eye injury probability curves from the peer-reviewed, scientific literature.

Figure 8. Eye injury risk as a function of normalized kinetic energy. Taken from *Kennedy and Duma, Eye Injury Risk Functions for Human and FOCUS Eyes: Hyphema, Lens Dislocation, and Retinal Damage, 2011.*

The data were compared between the three conditions (*Resistance Band*; *Door Anchor Contact*; and, *Door Anchor No Contact*) and for the three padded grip heights. ANOVA and t-tests with a Bonferroni correction were used to determine statistical significance; a significance level of 0.05 was used for all statistical comparisons.

Testing Results for the Exemplar BellFit Resistance Band

A total of 42 tests were conducted using the exemplar BellFit Classic Resistance Band with Padded Grips, size medium. Testing was not conducted for the *Door Anchor* condition with the padded grips at shoulder height because the door anchor ball showed signs of damage from repeated contacts with the aluminum plate. There were multiple tests conducted for all other combinations of test condition and padded grip heights. A summary of the data is contained in Table 1 below.

For each test, when the resistance band was released from under the unweighted athletic shoe, it moved simultaneously upward (toward the padded grips) and forward relative to the athletic shoe; see Figure 9. This forward motion occurred regardless of whether the door anchor ball was on the tubing (the *Door Anchor* and *Door Anchor with Only Tubing Contact* conditions) or not (the *No Door Anchor* condition).

Figure 9. Still images from a high-speed video from the side of a resistance band and door anchor release with the padded grips at shoulder level. The progression shows the upward and forward motion of the tubing and door anchor. (*Note: frame numbers in the upper left of each image indicate order and frame 387 is when the door anchor reaches eye height for someone of Ms. Nicolosi's size*)

 Table 1.
 Mean (± standard deviation) of the velocity, effective mass, kinetic energy, and normalized energy of the resistance band (either the tubing or the door anchor) when it reaches eye height for a female individual of Ms. Nicolosi's size. Note: An effective tubing length for eye contact was ½ inch for this table.

Test Condition Elbow Flexion	Velocity at Contact (miles per hour)	Effective Mass (pounds)	Kinetic Energy (J)	Normalized Energy (kJ/m ²)
<i>90</i> °	20.6 ± 2.2	0.027 ± 0.013	0.5 ± 0.3	3.5 ± 1.9
135°	39.4 ± 4.7	0.027 ± 0.008	1.9 ± 0.6	14.1 ± 4.3
Fully flexed	45.7 ± 7.6	0.036 ± 0.010	3.7 ± 1.8	25.3 ± 12.6
Door Anchor Contact				
<i>90</i> °	15.8 ± 2.0	0.055 ± 0.004	0.6 ± 0.2	0.8 ± 0.2
135°	37.8 ± 1.5	0.060 ± 0.002	3.9 ± 0.3	5.1 ± 0.4
Fully flexed				
Door Anchor with Only	Fubing Contact			
<i>90</i> °	9.0 ± 1.2	0.07 ± 0.06	0.1 ± 0.1	0.9 ± 1.0
135°	21.6 ± 2.0	0.04 ± 0.02	0.4 ± 0.3	3.0 ± 1.9
Fully flexed	29.1 ± 4.7	0.06 ± 0.04	0.9 ± 0.6	6.2 ± 4.3

Discussion Considering Testing Results

In general, the door anchor and tubing moved upward and forward, not backwards where the user's head would be located when in position to perform arm curls. From the tests, it is unclear how the door anchor or tubing would contact the eye of a user as it reached eye level. Despite this, the analysis assumed that the door anchor or the tubing would contact the user's eye when it reached eye height.

Considering the kinetic energy of the contacting component of the resistance band and the scientific literature, the *No Door Anchor* and the *Door Anchor Contact* tests had sufficient energy to create corneal abrasions for the elbow flexions tested and retinal damage for 135 degrees or more of elbow flexion. That is, the tubing or the door anchor would have had sufficient kinetic energy to create significant eye injuries. There was a lower likelihood of retinal damage when padded grips were placed in the position for 90 degrees elbow flexion; this was true for both the tubing and door anchor.

The *No Door Anchor* tests examine the eye injury likelihood in a scenario in which the door anchor is removed from the resistance band (or never existed at all), a user of Ms. Nicolosi's size attempts a curl, and the tubing comes out from under the foot of the user. Though the tubing in the testing moved forward (away from where the user's face would be), the analysis assumes that the tubing contacts the eye. Using the normalized kinetic energy and the scientific literature, the *No Door Anchor* condition would likely produce hyphema with 135 degrees or more of elbow flexion. Lens damage and retinal damage were also likely for higher elbow flexions. The likelihood of each eye

injury increased with elbow flexion and decreased with increasing tubing length (and projected area). Based on this data, had the door anchor been removed from the subject band by Ms. Nicolosi and the band came out from under her foot, she still would have sustained a significant eye injury.

Both *Door Anchor* conditions examine the eye injury likelihood when the door anchor is still on the resistance band and under the ball of the foot, a user of Ms. Nicolosi's size attempts a curl, and the door anchor comes out from under the foot of the user. *Door Anchor Contact* and *Door Anchor with Only Tubing Contact* differ in the component that would contact the eye.

For the *Door Anchor Contact* tests conducted, the normalized kinetic energy from door anchor contact related to a low likelihood of producing hyphema, lens dislocation, retinal damage, and/or globe rupture. While the kinetic energy of the door anchor in the *Door Anchor Contact* condition was similar to or greater than the tubing kinetic energy in the *No Door Anchor* condition, the projected area was more than 2½ times greater for the door anchor. This significantly larger projected area decreased the normalized kinetic energy. Even if one were to decrease the projected area of the door anchor by half (though there is no reason to do so), significant eye injury (hyphema, lens dislocation, retinal damage, and/or globe rupture) remained unlikely. Furthermore, for the same initial conditions as the *No Door Anchor* (that is, when the initial length of the resistance band is the same), the resistance band tubing had generally higher eye injury likelihoods when compared the to the door anchor.

For the *Door Anchor with Only Tubing Contact* tests, the normalized kinetic energy from door anchor contact related to a low likelihood of producing hyphema, lens dislocation, retinal damage, and/or globe rupture. Because the likelihood of injury was low from door anchor or tubing contact when the door anchor was attached (and placed under the ball of the foot), my testing does not support the conjecture that adding the door anchor to the resistance band increases the likelihood of an eye injury.

The time between the release of the resistance band system and when it reached eye level for Ms. Nicolosi was a small fraction of a second. Though Ms. Nicolosi testified that the door anchor ball hit her eye, there would have been little time for her to observe and differentiate what part of the resistance band system contacted her eye. Based on the limited time and the speed of the resistance band system, it is unlikely that Ms. Nicolosi had sufficient information available to her to determine what part of the resistance band system (that is, the anchor ball or the band) contacted her eye.

Biomechanical Engineering Analysis

The subject accident of March 12, 2015, was evaluated from a mechanical and biomechanical engineering perspective to examine the resistance band mechanical properties and kinematics and the mechanisms associated with Ms. Nicolosi's eye injury. The evaluation was based on the materials received and reviewed, the laws of physics, the principles of biomechanical engineering, scientific literature regarding human tolerance, my inspection of subject resistance band, and my testing. In addition, the analysis involved a detailed review of Ms. Nicolosi's medical records.

Benefits of a Resistance Band

Exercise resistance bands are simple, but versatile, pieces of exercise equipment that can be used for strength training and stretching for all fitness levels. Resistance bands were first used in sports medicine for injury prevention and recovery. Because resistance bands are lightweight and the direction of resistance can be manipulated (unlike free weights), exercises performed with resistance bands have the ability to target or isolate muscles to correct muscle imbalances while simultaneously preventing loading of bones, ligaments, and tendons of an injured area. For strength training, resistance bands can be used in lieu of free weights for familiar exercises such as squats, deadlifts, arm curls, flys, rows, chest and overhead presses, front and lateral raises, tricep kickbacks and overhead extensions, and abdominal exercises like Russian twists. Resistance bands can also be used for exercises that cannot be performed with free weights such as hamstring curls, glut presses and kickbacks, leg extension, and adductions and abduction exercises. Additionally, resistance bands can be used when the user is alone (that is, they do not require a spotter) and provide the benefits of partner assisted stretching without needing another person. Because resistance bands are small and lightweight (unlike free weights), they require minimal storage space and can be easily packed for travel.

Resistance Band Forces and Motions for Arm Curls

The BellFit Resistance Band users' manual describes and illustrates how to perform an arm curl (see Figure 7 Bottom Left above). To perform an arm curl with a resistance band, as shown, the athlete is in a staggered stance; that is, one foot is anterior (forward) of the pelvis and the other foot is posterior to (behind) the pelvis. The athlete holds onto the padded grips and places the tubing under the arch of the front foot. To execute an arm curl, the athlete pulls the band upward toward his or her shoulders. This action moves the hands posteriorly (rearward) from the starting position (say over the front foot). As the athlete moves his or her hands toward the shoulders, the resistance band stretches, creating tension in the resistance band. The section of resistance band tubing under the athlete's front foot experiences force on both sides of the foot (that is, the medial and lateral sides of the foot) that has components in the superior (upward) and posterior (rearward) directions; see Figure 10 below. The athlete must weight the front foot to resist the upward component. If the band were to slip under the athlete's foot, the force (in particular the posterior component) would move the band posteriorly and all subsequent band motion would be between the athlete's legs. A person executing an arm curl as described in the BellFit Resistance Band users' manual could not have the resistance band slip out from under his or her foot and make contact with his or her eyes.

Figure 10. Arm curl illustration from the BellFit manual (page 8) shows an athlete executing the arm curl exercise with the resistance band. The force and force components shown with arrows on the lateral side of the tubing as it comes out from under the foot. A similar force would be placed on the tubing as it comes out from under the foot on the medial side. (*Left*) Hands at the low position with the resistance band close to vertical and little tension on the resistance band. The force has mainly one component, in the superior direction (*orange and blue arrows*). (*Right*) The athlete has her hands at shoulder level. The force on the lateral side of the tubing as it comes out from the foot (*orange arrow*) has large components in the superior (upward – *blue arrow*) and posterior (rearward – *green arrow*) directions.

Ms. Nicolosi testified that she was attempting to perform arm curls in the manner shown in the BellFit Resistance Band users' manual. Ms. Nicolosi had her right leg in front of her body and the ball of her foot on the ball of the door anchor. Ms. Nicolosi's did not use the body configuration described in the text or shown in the illustration of the BellFit Resistance Band users' manual; the text instructs the athlete to "place tubing under arch of your right, front foot" and the illustration shows the athlete with her front foot flat (there is no observable ankle dorsiflexion in the illustration). The Safety Tips & Care Instructions on the first page of the manual also say to "make sure the band is secure under your foot before proceeding with each exercise." Placing the ball of her foot on the door anchor ball is an unstable condition and one would have ample proprioceptive cues that it was unstable. For example, when the door anchor ball is under the ball of the foot, it creates a stress concentration under the ball of the foot that would feel awkward when weighting the front foot. Furthermore, the front foot would feel unstable because the ankle would be dorsiflexed and the athlete would need to balance his or weight on the round door anchor (under the ball of the foot) and on a small region of the heel (on the ground); the athlete would need to actively keep the ankle from rolling (into inversion or eversion) and would have difficulty keeping

securely the door anchor under the ball of the foot. It is not reasonably foreseeable that a user would step on the door anchor ball during an arm curl exercise. Furthermore, Ms. Nicolosi did not have to remove the door anchor ball to use the resistance band properly for arm curls. She could have moved the door anchor to the side or even held it at the padded grips. Because the ball of the door anchor was under the ball of her foot, she was not following the instructions in the users' manual.

Eye Anatomy

A diagram of the eye is provided in Figure 11. The eyeball is a globe-shaped structure that contains light focusing elements and photoreceptors responsible for vision. It consists of three layers surrounding a fluid filled vitreous body that gives the eye its shape. The outermost layer is the fibrous layer, the middle layer is the vascular layer, and the inner layer is called the retina. The fibrous layer is made up of the sclera and cornea which are continuous with each other. The sclera (the white part of the eye) provides an attachment for extraocular muscles that move the eye. The cornea is the transparent portion located centrally at the front of the eye and responsible for refracting light. The middle layer consists of the choroid, iris, and the ciliary body. The choroid contains blood vessels to nourish the eye. The iris (the colored portion of the eye) is located in the anterior section and consists of a disc shaped structure with an aperture in its center called the pupil; smooth muscles in the iris dilate and constrict the pupil. Just posterior to the iris is the ciliary body, which contains the ciliary muscles that change the shape of the lens to focus light onto the retina and the ciliary processes that suspend the lens in place through ligaments (also known as zonules). The iris sits posterior to the cornea and anterior to the lens and ciliary body. The area between the cornea and the iris is known as the anterior chamber and is filled with aqueous humor, a clear fluid secreted by the ciliary processes that provides nutrition to the structures of the eye.

Figure 11. Diagram of the eye.

The innermost layer of the eye is known as the retina. The retina consists of an inner neurosensory layer with photoreceptors that detect light and an outer pigmented layer that is attached to the choroid and supports the neural layer. Both layers of the retina are present in the posterior and lateral portion of the eye. Only the pigmented layer continues to the anterior section and is known as the non-visual retina. In the center of the retina (in the posterior eye) is the macula. It contains a depression called the fovea that is about 1.5 millimeters in diameter, has a high concentration of photoreceptor cone cells, and is responsible for central, color, high-acuity vision.

Ms. Nicolosi's Diagnosed Right Eye Injuries

On the day of the accident, Ms. Nicolosi was evaluated by Dr. Dessner at the eye clinic at Lutheran Medical Center. Commotio retinae, wrinkling, posterior vitreous detachment, and vitreous hemorrhage were noted to the retina of her right eye. Corneal abrasion, hyphema, and iridodyalysis were reported to the anterior structures of the right eye. A posterior subscapular cataract was also noted. The following day, Dr. Gopal examined Ms. Nicolosi and reported subconjunctival hemorrhage, microhyphema, a traumatic cataract in the right eye, a nuclear sclerotic cataract in the left eye, proptosis of the right eye, and a right lower lid laceration laterally. The diagnosis was hyphema. Dr. Gopal did not have a view of the fundus (internal surface of posterior retina). Dr. Feig also evaluated Ms. Nicolosi the day after the accident and diagnosed Ms. Nicolosi with hyphema and a subluxed lens. Upon examining the retina, he noted that it was flat with no retinal detachment but had no view of the center (close to the macula). On May 7, 2015, Dr. Feig examined the retina and found a macular scar.

Three doctors examined Ms. Nicolosi within one day of her accident; the only common diagnosis was hyphema. Both Dr. Dessner and Dr. Gopal mention cataracts. Dr. Dessner does not clarify in which eye the posterior subscapular cataract was found. It is unclear if he is referencing the traumatic cataract mentioned by Dr. Gopal in the right eye or the posterior sclerotic cataract found during an IME by Dr. Fromer in the left eye.

Hyphema is characterized by blood in the anterior chamber of the eye and presents as redness over the iris (or colored portion of the eye); see Figure 12, bottom right. Hyphema can arise from trauma, intraocular surgery, or spontaneously due to a variety of conditions. When hyphema develops after blunt trauma, it is usually a result of a tear to the ciliary body or iris. The ciliary body has attachments to both the iris and the lens. A tear to the ciliary body can disrupt its attachment to the iris, resulting in iridodialysis, or its attachment to the lens, resulting in a dislocated or subluxed lens. A subluxed lens is a partially dislocated lens that remains in the lens space and can occur as a result of trauma, secondary to ocular disease (such as hypermature cataracts), or a post-surgical complication.

Figure 12. (*Top Row*) Illustration of hyphema - blood in the anterior chamber of the eye between the iris and cornea. (*Bottom Row, Left*) Illustration posterior vitreous detachment with an attached, intact retina. (*Bottom Row, Right*) Illustration of a retinal tear, retinal hole, and retinal detachment.

A posterior vitreous detachment refers to when the membrane of the vitreous body pulls away from the retina at the back of the eye and occurs due to age-related shrinking of the vitreous humor. Other risk factors for posterior vitreous attachments include myopia, trauma, and recent eye surgery (such as cataract operation). In most cases of posterior vitreous detachment, the retina remains intact and attached to the choroid layer; see Figure 12 *Bottom Row, Left.* However, if the retina adheres to the vitreous, the retina can tear as the vitreous pulls away from the structures at the back of the eye. Most retinal tears occur spontaneously but can also occur from trauma. When the retina heals, it can produce scar tissue that causes the retina to wrinkle. When the scar tissue overlies the macula, it is referred to as a macular scar.

Comments on Dr. Tipton's Report and Deposition

In his report, Dr. Tipton produced experimentally a force deflection curve of an exemplar resistance band he received from Mr. Friedman. Dr. Tipton did not inspect the subject band. He assumed the exemplar band he tested has the same force-deflection characteristics as the subject band. The force displacement characteristics of Dr. Tipton's exemplar band may not match the subject band (it is unclear how exactly he tested his exemplar band); thus, any of his calculations that relied on his exemplar testing may not be applicable to the subject accident.

Dr. Tipton stated that he converted the strain energy from his force deflection curve into kinetic energy for his analysis. Although it is unclear how exactly he tested his exemplar band, it appears that that Dr. Tipton stretched his exemplar band well beyond the range that Ms. Nicolosi would have used in performing an arm curl. If he used erroneously an exaggerated stretch, Dr. Tipton

would have overestimated the strain energy related to Ms. Nicolosi's accident and his subsequent calculations are not applicable to the subject accident. From his force deflection curve and the mass of the ball, Dr. Tipton calculated the velocity of the door anchor ball to be 97 miles per hour as it is released from the foot. Dr. Tipton's analysis is incorrect. When the ball initially leaves the foot, its velocity is zero (or very close to zero) and it accelerates from the force exerted on the door anchor by the tubing. In his testimony, Dr. Tipton implied that the velocity of the door anchor ball was 97 miles per hour when it contacted the eye. Based on the testing results above, the door anchor ball is traveling much slower when it reaches eye level and this slower speed relates to a much lower kinetic energy. Dr. Tipton's opinion on the velocity of the ball is erroneous and not applicable to the subject accident.

During his deposition, Dr. Tipton testified that he was unfamiliar with Ms. Nicolosi's diagnosed eye pathologies and the biomechanics to create her specific eye injuries. He did not determine the door anchor ball or tubing velocity, force, or energy at eye contact. Furthermore, Dr. Tipton did not calculate or use any metric to determine the likelihood of eye injury related to Ms. Nicolosi's accident or any other scenario. Dr. Tipton conducted no scientific analysis and he lacks the bases to conclude (to a reasonable degree of scientific certainty) that the presence of the subject door anchor ball increased the likelihood of Ms. Nicolosi's eye injuries or increased the likelihood of an eye injury in general. My testing showed that even without the door anchor attached, if the tubing struck Ms. Nicolosi's eye it would likely produce an eye injury (and would be more likely than contact from the door anchor ball). The presence of the door anchor ball on the resistance band did not increase the likelihood of Ms. Nicolosi's injury and does not represent an additional hazard as Dr. Tipton claims.

Dr. Tipton testified that he did not know whether the tubing struck Ms. Nicolosi's eve or if the tubing could have caused her eye injuries. Because Dr. Tipton submitted an analysis on the assumption that the door anchor ball contacted Ms. Nicolosi's eye and proposed alternate designs (discussed below), he should have shown that the door anchor ball contacted Ms. Nicolosi's eye and caused her injuries. From my examination of the subject resistance band system, there was no physical evidence on the door anchor or tubing that was a signature of contact with Ms. Nicolosi's eve. On the other hand, Ms. Nicolosi's injuries can be used as physical evidence. Her medical records did not show evidence of significant contact on the orbital rim, just contact with the eyeball. Based on the scientific literature, the average width of the margins of the right orbit is approximately 1.391 inches. The diameter of the subject door anchor ball is 1.368 inches; see Figure 2 above. For someone with an average sized right orbit, the difference between the orbital width and the door anchor ball diameter would be approximately 0.023 inches (that is, 3/128 inches); with such a small difference, it is unlikely that the door anchor would contact the eyeball and not contact the orbital rim for an average person. Furthermore, if the door anchor ball has a component of velocity that is not into the eyeball (that is, it has a component of velocity along the superior-inferior and/or medial-lateral axes), then it is more likely that the door anchor ball will contact the margin of the orbit. This likelihood increases with increasing door anchor ball speed. The tubing portion of the resistance band has a diameter of 0.43 to 0.47 inches and bends in the band can form small areas to contact the eyeball. The tubing is much more likely to contact the eyeball and not contact with an orbital rim. Based on this analysis, Ms. Nicolosi's diagnosed pathologies, and the lack injury in and around the orbit (including the skin), it would be more likely

that the tubing contacted Ms. Nicolosi's eye (not the door anchor ball); the geometry of the door anchor ball (that Dr. Tipton is critical of) makes it unlikely that it would contact the eyeball alone. It is unclear why Dr. Tipton makes the assumption that Ms. Nicolosi's eye was contacted by the door anchor. If the tubing contacted Ms. Nicolosi's eye and created her injuries, then any alternate design for the door anchor provided by Dr. Tipton would not be applicable to subject accident.

Dr. Tipton was critical of the door anchor ball on the subject band. He wrote that a "hard ball" should not be used and when Bell increased the size of the ball, it made the product "potentially even more dangerous." It is unclear why Dr. Tipton believes that the larger ball size would be more dangerous. Mr. Parks, from Bell, testified that he was unaware of any of the second generation (larger) door anchors breaking. This would indicate the redesign was successful for the intended purpose. If the second-generation ball were to come back toward a user, the larger door anchor ball would also be more likely to contact the bones around the eye (instead of just the eyeball), sharing the load transmitted to the face and reducing the energy transferred to the eye. This would make eye injury less likely. Also, a larger ball would have an increased projected area if the ball did contact the eyeball. From the scientific literature, a larger projected area decreases the normalized energy of contact and lowers eye injury likelihood. Based on this, Dr. Tipton's opinion that the larger, second-generation door anchor ball is more dangerous is incorrect.

Alternative Door Anchor Designs

Dr. Tipton opined that "under no circumstances should a hard ball have been used with any kind of attachment." He presented alternative door anchor designs that he claimed were safer. In his report and deposition, Dr. Tipton provided no scientific analyses or data to support his "safer" designs or his opinion that they would reduce the likelihood of injury.

Dr. Tipton made a prototype of his own design that consisted of a 3¹/₂-inch foam ball, a PVC tube insert, a "safety strap" fabricated from a parachute cord, and spring-loaded ball cord locks. Though the parachute cord was sewn into the nylon strap of the anchor ball, it was unclear how the nylon strap was attached to Dr. Tipton's ball. Dr. Tipton did not consider how the foam material he chose would degrade over time or the environment it in which it may be used. For example, he did not consider foam degradation from wear that could (and likely would) alter the surface and dimensions of a foam ball. Furthermore, there was no consideration by Dr. Tipton of the environmental conditions such as exposure to water, sweat, cleaning solutions, or UV light – all of which may be in contact with the door anchor ball during transport, storage, or cleaning. As the foam deteriorates, the margins or surface of a foam rubber ball would change and, in Dr. Tipton's design, could expose the PVC tube pipe. In addition, depending on the foam selected, it may fail to work properly as a door anchor, sliding past the door and creating a potential for injury; it is important to note that the subject ball did not fail to perform its function as a door anchor and no components of the subject resistance band system broke. Also, if the parachute cord were to be wrapped around the resistance band tubing, it would produce a stress concentration on the tubing, increasing the likelihood of tubing failure. While Dr. Tipton stated that he tested his prototype a dozen times using a door, he did no analysis to show that his door anchor would not deteriorate, lose function, or become a hazard.

In addition to the mechanical issues with Dr. Tipton's alternative design, he did no analysis to show that his design would lower injury likelihood in general or prevent Ms. Nicolosi's accident. Dr. Tipton did not know how much his design weighed. He also did not provide analyses related to the velocity or kinetic energy of his door anchor in the scenario in which someone were to step on the ball, have it release from under the foot, and have a component of the Dr. Tipton's door anchor contact the eye. This type of analysis would also need to be conducted for a door anchor ball with significant wear (as described above) that could expose the margins of PVC pipe and for the spring-loaded ball cord locks (that would appear to be made of a hard polymer similar to the BellFit door anchor ball). Dr. Tipton did not evaluate or provide any scientific evidence that his prototype performs better as a door anchor or would decrease the likelihood of an eye injury compared to the subject ball anchor.

While Dr. Tipton provided recommendations to optimize his design, he did not state what parameters he intended to "optimize." Dr. Tipton indicated that he would use a "softer foam ball" that would weight 20 to 25 percent less and have a lower coefficient of restitution, as well as, replace the PVC tubing with softer rubber or a dense foam rubber insert. His "optimized" design has not been created or tested. These "optimizations" do not solve (and most likely would make worse) the problems with reliability and degradation in Dr. Tipton's proposed design. There is no evidence that Dr. Tipton's optimized design would perform better as a door anchor or would reduce the risk of injury, when compared to his prototype or the subject BellFit door anchor.

Dr. Tipton also mentioned door anchors consisting of only a strap (from Bollinger) and donut designs used by Bodyelastics and the BellFit Fit Stick. Dr. Tipton did not provide any bases or evidence that these alternatives would work better as a door anchor than the subject ball and did not mention whether or not these designs had other potential problems. For example, attaching directly a strap door anchor to a door handle could cause premature failure of the door handle and locking mechanism. The foam donuts mentioned would also have the same degradation and cleaning problems discussed above for Dr. Tipton's prototypes. Furthermore, the edges of the cylinder in the donut design shown by Dr. Tipton could contact the eye and create injury. Dr. Tipton does not analyze or show that these alternate designs would lower injury likelihood in general or prevent Ms. Nicolosi's accident.

Conclusions

Based on the analysis presented above, I have reached the following conclusions:

- 1. A person executing an arm curl consistent with the instructions and illustrations in the BellFit Resistance Band users' manual could not have the resistance band slip out from under his or her foot and make contact with his or her eyes unless the user does not keep his or her foot securely on the floor.
- 2. It is not reasonably foreseeable that a user would step on the door anchor ball during an arm curl exercise.
- 3. Ms. Nicolosi did not have to remove the door anchor ball to use the resistance band properly for arm curls. Had she moved the door anchor ball to the side, she could have performed an arm curl as described in the BellFit Resistance Band users' manual.
- 4. The resistance band tubing can cause significant injuries to an individual of Ms. Nicolosi's size, regardless of whether or not the door anchor is attached to the tubing. Had the door anchor been removed from the subject band by Ms. Nicolosi and the band came out from under her foot, she still would have sustained a significant eye injury.
- 5. The likelihood of an eye injury was not increased with the addition of the subject door anchor; the testing results do not support Dr. Tipton's conjecture that adding the door anchor to the resistance band increases the likelihood of an eye injury.
- 6. Dr. Tipton's opinion on the velocity of the ball is erroneous and not applicable to the subject accident.
- 7. It is unlikely that Dr. Tipton's alternative design would function well over time as a door anchor. Furthermore, Dr. Tipton did no analysis to show that his design would lower injury likelihood in general or prevent Ms. Nicolosi's accident or injury.

The opinions in this report, based upon the materials reviewed and my education, experience, and knowledge, and they are presented with a reasonable degree of mechanical engineering, biomechanical engineering, and scientific probability. As more information becomes available, this report may be amended.

Sincerely,

un

Irving S Scher, Ph.D., P.E. Principal and Biomechanical Engineer

Licensed Mechanical Engineer Alaska #AEL M 12083 California #M32908 Washington #44553

Attachment A. Curriculum Vita for Irving Scher, Ph.D., P.E.

Dr. Irving Scher is a Principal and Biomechanical Engineer at Guidance Engineering and Applied Research. He specializes in biomechanical engineering and accident reconstruction. Dr. Scher evaluates product safety and investigates human injuries in accidents and product failures by using biomechanical engineering techniques that apply the principles of engineering to the human body. He also uses mechanical engineering to analyze mechanical systems used for injury mitigation or those involved in accidents and product failures. He has reconstructed and evaluated injury claims resulting from transportation accidents (including aircraft, bicycle, motor vehicle, and railroad accidents), slips/trip and falls, consumer product failures, industrial equipment accidents, and recreational activities (such as skiing, snowboarding, water skiing, wakeboarding, cycling, and amusement park rides).

Dr. Scher has extensive experience with biomechanical engineering testing design and analysis. For recreational sports and motor vehicle accidents, Dr. Scher has researched human motion, forces, and injury potential using volunteer studies, anthropomorphic test devices, computational models of the human body, and statistical analyses. He has also investigated the effectiveness of personal protective devices, such as snowsport, bicycle, and motorcycle helmets. Dr. Scher has dedicated years of research to skiing and snowboarding safety and has conducted award-winning research in the areas of snowsport safety and human-machine interfacing.

Dr. Scher serves on the Board of Directors for ASTM International and for the Safety Equipment Institute. He is the president and former scientific chair of the International Society for Skiing Safety; a USA delegate on the International Standards Organization committee TC83/SC4 on Snowsports Equipment; the chairman of ASTM F27 on Snow Skiing and Snowboarding; and, the subcommittee chair for ASTM F27.60 for Research and Statistics. He is also an Affiliate Scientist in the Applied Biomechanics Laboratory at the University of Washington. Dr. Scher held the position of Adjunct Associate Professor of Clinical Physical Therapy in the Department of Biokinesiology and Physical Therapy at the University of Southern California (2004 to 2009).

Academic Credentials and Professional Honors

Ph.D., Mechanical Engineering, University of California, Berkeley, 2000
M.S., Mechanical Engineering, University of California, Berkeley, 1998
B.S., Mechanical Engineering, Chemistry Minor, University of Pennsylvania (*cum laude*), 1995

Sachiko Yahashi Memorial Award, International Society for Skiing Safety (2005); Fellowship to study at the Danish Center for Applied Mathematics and Mechanics, Technical University of Denmark, Lyngby, Denmark (1998); Tatnall Award in Mechanical Engineering, University of Pennsylvania (1995); 1st place, Senior Design competition, University of Pennsylvania (1995); 1st place, ASME Undergraduate paper competition, Southeastern Pennsylvania (1995); Mayor's Scholar, University of Pennsylvania (1991–1995)

Engineering Licenses and Certifications

Registered Professional Mechanical Engineer, Alaska, #AEL M 12083 Registered Professional Mechanical Engineer, California, #M32908 Registered Professional Mechanical Engineer, Washington, #44553

Certified XL Tribometrist, CXLT, for floor slip resistance measurements

Attachment B. Testimony List for Irving Scher, Ph.D., P.E.

Depositions (2013-2017):

08/13	Sullivan v. Keystone Masonry, Snohomish County Superior Court, Washington
09/13	Summers v. Salmon Bay Barge Line, United States District Court, Western WA
12/13	Farnsworth v. City of Yakima, Yakima County Superior Court, Washington
02/14	Wilder v. United Airlines, United States District Court, Western Washington
03/14	Chamberlain v. Hedderly-Smith, Summit County Court, Utah
03/14	Amerald v. Tropicana Las Vegas, United States District Court, Nevada
08/14	O'Donnell v. Sunbelt Rentals, Cuyahoga County Court of Common Pleas, Ohio
10/14	McLaughlin v. Mountain High, Los Angeles County Superior Court, California
10/14	Hendelman v. Mammoth Mountain, Mono County Superior Court, California
01/15	Canales v. Roywell Services, Brooks County District Court, Texas
02/15	Shumbo v. K2 Sports USA, Hartford Superior Court, Connecticut
03/15	Garcia v. Awerbach, Clark County District Court, Nevada
03/15	Hausman v. Holland America Line, United States District Court, Western Washington
05/15	Ashe v. Gerriten, Clark County District Court, Nevada
11/15	Strozier v. Time Warner Cable, Los Angeles County Superior Court, California
05/16	Thompson v. Central Plumbing & Heating, Anchorage District Superior Court, Alaska
06/16	Pedersen v. Crystal Mountain Resort, King County Superior Court, Washington
07/16	Silva-Bilboa v. Hotspur Sports Company, United States District Court, Colorado
11/16	Graham v. Snowshoe Mountain, Pocahontas County Circuit Court, West Virginia
12/16	Mahoney v. Deer Valley Resort, United States District Court, Utah
02/17	Lipton v. Mountain Creek Resort, United States District Court, New Jersey
02/17	McIntyre v. Quirk, United States District Court, Utah Central Division
06/17	Kearney v. Okemo LLC, United States District Court, Vermont

Trials, Hearings, and Arbitrations (2013-2017):

- 12/13 Thompson v. Central Plumbing & Heating, Anchorage District Superior Court, Alaska
- 02/14 Puentes v. Barnett, Thurston County Superior Court, Washington
- 09/14 Eliasen-Ortiz v. Elizabethtown Gas, Union County Superior Court, New Jersey
- 12/14 McLaughlin v. Mountain High, Los Angeles County Superior Court, California
- 02/15 Molloy v. State of New York, New York Court of Claims, New York
- 04/15 Heilman v. Terry Peak Ski Area, Lawrence County Circuit Court, South Dakota
- 04/15 Bourgeois v. Bear Creek Mountain, Berks County Court of Common Pleas, PA
- 06/15 Shumbo v. K2 Sports USA, Hartford Superior Court, Connecticut
- 10/15 Hausman v. Holland America Line, United States District Court, Western Washington
- 02/16 Garcia v. Awerbach, Clark County District Court, Nevada
- 04/16 Ashe v. Gerriten, Clark County District Court, Nevada
- 05/16 Rosenkranz v. U-Haul of Washington, Clark County Superior Court, Washington
- 06/16 Thompson v. Central Plumbing & Heating, Anchorage District Superior Court, Alaska

Attachment C. 2017 Guidance Engineering Fee Schedule

Hourly Rates for Consultants

Guidance Engineering charges hourly rates for services performed, including design review, material review, travel time, inspections, analysis, testing, deposition and trial preparation and testimony time. For depositions, Guidance Engineering charges for travel time to and from depositions at the standard hourly rates. Rates may be increased by 25% with deliverables due within 25 business days of project commencement*.

Jasper Shealy, Ph.D., C.P.E.	\$450
Irving Scher, Ph.D., P.E.	\$385
Lenka Stepan, Ph.D.	\$250
Bethany Suderman, Ph.D.	\$225
Nick Yang, Ph.D., P.E.	\$225
Jeff Campbell, Ph.D	\$180
Testing Consultants	\$75-\$150

Expenses

Guidance Engineering charges (with a 10% markup) for all out-of-pocket costs and expenses attributable directly to the work performed on a project, including:

- Travel costs, such as airfare and reasonable amounts for accommodations and meals
- Automobile travel is billed at \$0.60 per mile
- Contract testing and labor, facility rental, equipment rental, and consumable testing components
- Specialized engineering software usage fees are charged on a per project basis and range between \$250 and \$2,500
- Daily usage charges for the following equipment are as follows:

Motion Capture Body Suit	\$7,500
3D Laser Scanner (Faro)	\$1,200
ASTM F504 machine	\$1,000
High Speed Video Camera	\$500
English XL Tribometer	\$375
Vermont Release Calibrator	\$350
Radar Gun (Stalker ATS II)	\$250
Other specialized equipment	quoted on a per project basis

Attachment D. List of Client Supplied Materials

Legal Documents

• Plaintiff's response to defendant BRG Sports, Inc.'s first set of interrogatories

Deposition Transcripts

- Richard Della Penta with exhibits, dated March 22, 2017
- William Nelson, dated July 7, 2017
- Stella Nicolosi with exhibits, dated March 22, 2017
- Thom Parks with exhibits, dated April 27, 2017
- Steven Tipton, Ph.D., with exhibits, dated June 8, 2017

BRG Documents

- Resistance Band Exercise Manual
- Bureau Veritas Reports

Photographs

- Copies of photographs of plaintiff (5)
- Copies of product inspection photographs (41)

Medical Records

- NYU Lutheran Medical Center
- The Brooklyn Eye Center Robert Feig, M.D.
- Staten Island University Hospital
- Verification of Legal Blindness

Other Expert Reports

- William Nelson (Humatec) Report, dated May 31, 2017
- Steven Tipton, Ph.D., P.E., Report dated May 23, 2017

1 3 STIPULATIONS 2 FEDERAL 3 IT IS HEREBY STIPULATED AND AGREED by and between (among) counsel for the respective 4 parties herein, that filing and sealing be and the same are hereby waived. 5 IT IS FURTHER STIPULATED AND AGREED that 6 all objections, except as to the form of the question, shall be reserved to the time 7 of the trial. IT IS FURTHER STIPULATED AND AGREED that 8 the within deposition may be sworn to and 9 signed before any officer authorized to administer an oath, with the same force and 10 effect as if signed and sworn to before the Court. 11 12 13 14 15 16 17 18 19 20 21 2.2 23 24 25

1	Scher 4
2	IRVING SCHER, called as a
3	witness, having been first duly sworn by a
4	Notary Public of the State of New York, was
5	examined and testified as follows:
6	EXAMINATION BY
7	MR. SMILEY:
8	Q. Please state your name for the record.
9	A. Irving Scher.
10	Q. What is your current business address?
11	A. 205 Northeast, Northlake Way, Suite
12	100, Seattle, Washington 98105.
13	Q. Good morning, Dr. Scher. As you know
14	from our prior directions, my name is Andrew
15	Smiley. I am going to ask you some questions
16	today, all right?
17	A. Sounds good.
18	Q. If you need to take a break, let us
19	know and otherwise we're going to try and go
20	straight through today, all right?
21	A. Sounds good.
22	Q. I previously received at our request
23	through your counsel a copy of your file via a
24	video download which was in a format with a
25	bunch of sub-folders where you categorized the

1 Scher 5 2 information in your file, correct? 3 Α. I believe so. 4 Ο. Other than that file do you have any 5 other items or documents that were part of your 6 review or analysis that were not contained in 7 that digital file provided to us? 8 Α. Yes. 9 Ο. Could you tell me what that 10 information was? Sure. We provided previously the full 11 Α. 12 set of data and videos for my testing, so that 13 was not in the download that you had, so if we submitted it previously, it wasn't necessarily 14 15 in that new file and then, obviously, I didn't 16 provide you in the digital download physical 17 items from the case. 18 By physical items are you referring to Ο. 19 anything other than your testing equipment and 20 testing setup? 21 Α. That is pretty much it. 22 I noticed when you came in for the Ο. 2.3 deposition in the room that you had a box. 24 Would you mind telling me what information is 25 contained in that box?

1 Scher 6 2 Α. Sure. Let me grab it. I have 3 exemplar straps or exemplar strap, other 4 resistance bands, resistance band, door anchors, 5 load cells or a load cell, strength tensiometer 6 and some other testing components. Were those all items that were 7 Ο. 8 referenced in your report somewhere? 9 Α. For the most part, yes. 10 Ο. Is it fair to say that if any of those items had any significance in your analysis in 11 12 this case, they would have been referenced 13 somehow within the four corners of your report? Well, I am not sure that is 14 Α. 15 necessarily the case but probably. 16 Is there anything you can think of Ο. that is contained within that box that was part 17 18 of your analysis that was not referenced in your 19 report? 20 Α. Yes. 21 Q. Could you tell me what that is or 22 those items are? 2.3 Α. Sure. For example, I have a door 24 anchor from my own personal resistance band that 25 is in the box. It's not referenced in the

1 Scher 7 2 report. 3 When you say your own personal Ο. 4 resistance band, is that something that you own 5 outside of your capacity as an expert engineer? 6 Outside of this case, correct. Α. 7 Ο. Is that something you were using for personal use in your leisure time or was that 8 9 something that was used outside of this case but 10 still is part of your professional work? No, no, it was not part of the 11 Α. 12 professional work, this was a personal use item. 13 Ο. Had you used that before your involvement in this case? 14 15 Α. My own personal resistance band, yes. 16 Can you tell me what item that is? Ο. 17 Α. Yes. It's a -- here, I will show you. It's a door anchor for the resistance band. 18 MR. SMILEY: Just let the record 19 reflect because we're not on video that 20 21 that appears to be some type of flat 22 rectangular object. 2.3 Α. It's a webbing piece. It's an SPRI 24 door anchor. 25 Ο. It's a webbing material?

1 Scher 8 2 There is webbing and then a larger end Α. 3 the other side, so there is a loop where the 4 resistance band would go through and then the 5 side that would go through the door for the 6 doorjamb. 7 Ο. That is some type of strap; is that fair to say? 8 9 Α. Yes, strap and anchor. 10 Ο. There is no ball on there, is there? Internal to the webbing there is. 11 Α. 12 Could you tell me the make and model Ο. 13 of that unit? It's an SPRI. I don't know the model. 14 Α. 15 Q. Do you happen to have any of the 16 packaging that came in? 17 Α. Probably not. 18 Q. Did you use that in your analysis in 19 this case? 20 Α. I considered it but it's not part of 21 the engineering analysis in this case. 22 What did you consider about that? Ο. 2.3 Α. I considered its design when assessing 24 Dr. Tipton's alternate designs. 25 Q. Did you form any opinions as a result

DEITZ Court Reporting - A Lexitas Company 800-678-0166

1 Scher 9 2 of that? 3 I think this is just part of my Α. 4 thought processes. I don't think there is 5 anything in particular with this that went into 6 an opinion but it's part and parcel to my 7 consideration in the case. 8 Ο. Did you consider that that attachment 9 was a reasonable alternative design as a door 10 anchor for resistance band to the door anchor that we'll be discussing in Ms. Nicolosi's case? 11 12 That was a lot. I think the answer is Α. 13 I think this is an inferior design to what is in 14 the subject case. Why is that? 15 Q . 16 Α. Because I think it's harder to keep 17 this in the door than the subject ball or the subject door anchor. 18 19 Ο. Did you do testing to come to that conclusion? 20 21 Α. I did not. 22 Have you used that yourself to do Ο. 2.3 biceps curls? 2.4 Α. Yes. 25 Q. Did you find it worked okay?

1 Scher 10 2 Yes. The SPRI band worked fine for Α. 3 curls, yes. 4 Ο. Did you use it with the door 5 attachment to do any exercises? 6 I don't think I did, no. Α. 7 Ο. So, you did not actually affix that door anchor or door attachment to a door and 8 9 perform exercises with the resistance band? 10 Α. Correct. Do you hold any professional licenses 11 Ο. 12 in New York State? 13 Α. In New York State? 14 Ο. Yes. Α. 15 No. 16 Are you a member of any professional Q. 17 organizations in New York State? 18 Α. Yes. 19 Q . Tell me which ones, please? The American Society of Mechanical 20 Α. 21 Engineers. 22 Ο. That is a national society? 23 Α. It is. 24 Q. Are you a member --25 Α. I believe they're headquartered in New

1 Scher 11 2 York. 3 Are you a member of a specific New Ο. 4 York chapter of that organization? 5 Α. No. 6 Objection. MR. UGHETTA: 7 Presupposes that there is one. Objection 8 to form. 9 Ο. Any other professional organizations 10 that you're a member of in New York State? 11 Α. Not New York State specific that I can think of. 12 13 Q . Are you ever taught any courses in the State of New York? 14 15 Α. Not that I can think of, no. 16 Have you ever lectured in your Ο. 17 professional capacity to anyone in the State of 18 New York? 19 Α. Not that I can think of, not in New 20 York, no. 21 Q. Now, in a prior case in which I was 22 representing a plaintiff and questioned you as 2.3 an expert that was involving a ski accident, correct? 24 25 Α. That's correct.

1 Scher 12 2 At that time you presented yourself as Ο. an expert in cases involving ski accidents, 3 4 correct? 5 Α. I was offered as an expert in skiing, 6 sure. 7 Would you agree that the bulk of your Ο. professional expertise as set forth in your CV 8 9 is snow or alpine sports related? 10 I certainly have specialized knowledge Α. in that area. 11 12 Would you agree that the bulk of your Ο. 13 expertise as you identify it in your CV as far as organizations, publications, presentations 14 15 and committees is in snow or alpine-related 16 activities? 17 Α. I would say the bulk of my work is in 18 biomechanical engineering. I certainly hold a number of leadership positions in the snow sport 19 20 community but my research and my interest is in 21 biomechanical engineering. 22 As far as what you have lectured in Ο. 2.3 and published in as defined in your CV, would it 24 be fair to say that as far as lectures and 25 publishing that the subject matter of those was

1 Scher 13 2 primarily in snow or alpine-related situations? 3 I would say that is true. Α. 4 Ο. Would you be able to say what 5 percentage of your publications or lectures is 6 snow or alpine related relative to other areas? 7 Α. I am not sure what it would be. Would it be fair to say at least 75 8 Ο. 9 percent of your publications and presentations 10 were snow or alpine related? 11 It could be. I am not sure. Α. 12 What percentage of expert work do you Ο. 13 do on behalf of plaintiffs being the injured 14 parties? 15 Α. I would say 10 to 20 percent of my 16 litigation related work would be on behalf of 17 plaintiffs. 18 What percentage of your litigation Ο. work is done on behalf of defendants? 19 20 Α. It would be the rest of it to equal a 21 hundred percent, so 80 to 90 percent. 22 Prior to your involvement in this case Ο. 2.3 do you have any prior experience professionally 24 with resistance bands? 25 Α. Professionally with resistance bands,

1 Scher 14 2 no. 3 Prior to your involvement in this case Ο. 4 do you have any prior experience with home 5 fitness products? 6 Α. No. Professionally you're asking, 7 correct? That's correct? 8 Ο. 9 Α. Okay. Do you consider yourself an expert in 10 Ο. 11 the field of resistance bands? 12 Α. I feel I now have specialized 13 knowledge in that area. 14 Ο. In resistance bands specifically? Α. 15 Yes. 16 Did you have any specialized knowledge Ο. 17 in resistance bands prior to your involvement in 18 this case? 19 Α. No. 20 So, to the extent that you consider Ο. 21 yourself to have specialized knowledge in 22 resistance bands it's solely as a result of your 2.3 work in this case; is that fair to say? 24 Yes, specific for resistance bands. Α. 25 Q. Prior to your involvement in this case

1 Scher 15 2 did you consider yourself to be an expert in 3 resistance bands? 4 Α. If you would say an expert means I 5 have specialized knowledge, I probably would say 6 not necessarily, although I do feel I have 7 specialized knowledge in biomechanical 8 engineering. 9 Ο. But specifically with regard to prior 10 knowledge or specialized knowledge in resistance 11 bands did you have any prior to your involvement 12 in this case? 13 Α. I don't believe so, no. 14 Ο. Is it fair to say prior to your 15 involvement in this case you never published any 16 articles relating to resistance bands? 17 Α. Yes. 18 Would it be fair to say prior to your Ο. 19 knowledge in this case you never conducted any peer review studies involving resistance bands? 20 21 Α. That is true. 22 Would it be fair to say prior to your Ο. 2.3 involvement in this case you never taught any 24 courses involving resistance bands? 25 Α. Yes, I think that is true.

DEITZ Court Reporting - A Lexitas Company 800-678-0166

1 Scher 16 2 Have you ever received any training of Ο. 3 any kind in the use of a fitness band? 4 Α. Yes. 5 Can you tell me about the training you Ο. 6 received? 7 Α. Yes. As part of the USC physical therapy department resistance bands were used 8 9 there and as part of my work there I observed 10 and saw people being trained on how to use 11 resistance bands. 12 When was that? Ο. 13 Α. Early 2000s. 14 Ο. Did you receive any formalized 15 training that resulted in any type of 16 certification, anything like that, in the use of resistance bands? 17 18 Α. No. 19 Q. Are you certified as a personal 20 trainer? 21 Α. I am not. 22 Are you certified as an athletic Ο. 2.3 trainer? 2.4 Α. I am not. 25 Q. Prior to your involvement in this case

1 Scher 17 2 did you ever testify as an expert in a matter 3 involving resistance bands? 4 Α. No. 5 Ο. Prior to your involvement in this case 6 did you ever testify as an expert regarding any 7 type of door anchor or door attachment in use with a fitness product? 8 9 Α. No. 10 So, is it fair to say that since you Ο. 11 have no prior experience professionally with 12 resistance bands that you're not really an 13 expert in the field of resistance bands? 14 MR. UGHETTA: Objection to form. 15 Α. I believe I now have specialized 16 knowledge with respect to resistance bands. 17 Q. So, do you consider yourself to be an 18 expert in the field of resistance bands? 19 Α. If by expert you mean do I have specialized knowledge, I believe I do have 20 21 specialized knowledge now relating to resistance 22 bands. 2.3 Ο. What is your basis for your 24 specialized knowledge? 25 Α. My work in this case, the testing that

1 Scher 18 2 I have done, my analyses. 3 So, you became an expert in resistance Ο. 4 bands by being retained for this case, is that 5 fair to say? 6 I guess you could consider it that Α. 7 way. I feel like the case or my role is biomechanical engineering applying to resistance 8 9 bands, so I feel like I was -- I had specialized 10 knowledge in that before and now I have applied 11 it to resistance bands, so it's specific to 12 resistance bands. I believe I have gained that 13 knowledge. 14 Ο. Do you have your laptop open or your 15 iPad that you can access your report that you 16 rendered in this case? 17 Α. I do. 18 Q. Can you please go to page 19 of your 19 report? 20 Α. I am at page 19. 21 MR. SMILEY: Just let the record 22 reflect we're referring to Dr. Scher's 23 report that he rendered and signed and 24 was exchanged in this case. It's the 25 only report that has been exchanged on

DEITZ Court Reporting - A Lexitas Company 800-678-0166

1 Scher 19 2 his behalf. 3 Now, do you see there is a paragraph Ο. 4 that starts, quote, benefits of a resistance 5 band? 6 I do. Α. Where did you get that information 7 Ο. 8 from that is contained in that report in that 9 paragraph? 10 That is general information that Α. either I knew or I observed in relation to this 11 12 case. 13 Q . Did you come up with this language on 14 your own or was it taken from somewhere? 15 Α. You know, I may have come up with some 16 of it on my own, some of it may be paraphrasing 17 from other things that I have read or I have 18 seen, I can't say for sure. What did you read or see regarding 19 Ο. resistance bands that you would have used for 20 21 the information in this paragraph of your 22 report? 2.3 Α. Internet searches, looking at various 24 product descriptions, watching videos, things of 25 that nature.
1 Scher 20 2 Doing something that anybody in the Ο. 3 general public could do to get this information; 4 is that fair to say? 5 Α. For the benefits of resistance bands, 6 sure. 7 Ο. So, in other words, this is not 8 information that you know as an expert in 9 resistance bands that you're putting in your 10 report, it's information that anybody in the general public could find out about, correct? 11 12 MR. UGHETTA: Objection to form. 13 Α. If someone were to do the research, 14 they could look a lot of this information up, 15 sure. Some of it I knew from my work at USC in 16 the physical therapy department. 17 Ο. Are you a licensed physical therapist? 18 I am not. Α. 19 Ο. Did you have any prior experience 20 before this case in evaluating accidents 21 involving eye injuries? 22 I have had experience with them, yes. Α. 2.3 Q. Can you tell me how many cases you 24 have been involved in as an expert where a 25 plaintiff has sustained an eye injury?

DEITZ Court Reporting - A Lexitas Company 800-678-0166

1 Scher 21 2 I don't know if I can give you how Α. 3 many were included in eye injury but where the 4 main injury was an eye injury I would say in the 5 ballpark of six. 6 Did you render reports in those six Ο. 7 cases where the main injury was an eye injury? I don't recall. 8 Α. 9 Ο. Did you testify either at a deposition 10 or at trial in any of those cases that involved eye injuries? 11 I don't recall. 12 Α. 13 Ο. Would you be able to check and find 14 out and if we requested of Mr. Ughetta you can 15 let him know if you did, in fact, either testify 16 or render a report in any prior matters involving eye injuries? 17 18 I can look for that but I only keep my Α. 19 testimony list for the last four years, so if it's before that, I wouldn't have a way of 20 21 finding that out. 22 As you sit here today do you have a Ο. 2.3 recollection specifically of any of the facts 24 involving any of those six cases where the main 25 injury was an eye injury?

Page 22 December 7, 2017

1 Scher 2.2 2 Yes. Α. 3 Ο. Can you tell me case by case what you 4 recall? 5 Α. The one that comes to mind is an eye 6 injury in snow sports. 7 Ο. Is that one case or more than one case? 8 9 Α. Well, all of those approximate six 10 cases are snow sports related but the one that 11 comes to mind that I remember most vividly is a 12 snow sports case. 13 Q. How did the person sustain an eye 14 injury in that case? 15 Α. That was with the handle of a pole 16 that they were using during skiing. 17 Q. What was the injury sustained to the 18 eve? 19 Α. If I remember correctly, and this is 20 just a vague recollection, I think it was a 21 globe injury. 22 What is a globe injury? Ο. 2.3 Α. A rupture. The eyeball breaks open. 24 Ο. As a result of that was that person 25 rendered blind?

1 Scher 23 2 Α. In that eye, yes. 3 Did you do a biomechanical engineering Ο. 4 analysis in that case as to the forces placed 5 onto the eye? 6 Α. Yes. That was part of the analysis. 7 Ο. What year was this that you did the analysis of this case? 8 9 Α. I don't know, over ten years ago. 10 Do you know the name of the plaintiff Ο. or the name of who your client was? 11 12 No and no. Α. 13 Ο. In order to test the loads on the eye 14 in that analysis did you use any type of 15 synthetic eye for that purpose? 16 Α. I did not. 17 What, if any, material did you use to Ο. 18 replicate the eye for receiving that load? 19 Α. I used a head form in that case. What head form? Do you recall the 20 Ο. 21 make or model of that head form? 22 I don't know the make and model but it Α. 2.3 would be a standard isotype of head form. 2.4 Did the head form contain load cells? Ο. 25 Α. No.

1 Scher 24 2 Did the head form contain any eye Ο. 3 modules? 4 Α. No. 5 Ο. Other than that case can you tell me 6 the specifics of any other cases you were 7 involved in relating to eye injuries where the eye injury was the main injury? 8 9 Α. The other ones that come to mind are 10 snow sport injuries where people contacted objects and sustained eye injuries. 11 12 Ο. Can you give me any examples? 13 Α. For example, contacting a tree. 14 Ο. Anything else? Any other examples of 15 contacts that caused eye injuries in snow sports 16 cases that you were involved in? 17 Α. Not that I recall. 18 Do you have any medical training? Q. 19 Α. I do not. 20 Do you have any training with regard Ο. 21 to the anatomy of the eye? 22 Nothing specific to that, no. Α. 2.3 Q. Have you had any training in injuries 24 of the eye? 25 Α. No specific training, no.

1 Scher 25 2 Do you have any training in treatment Q. 3 of eye injuries? 4 Α. No. 5 Have you ever examined a human Q. 6 eyeball? 7 Α. No. 8 Have you ever rendered medical Ο. 9 treatment for an eye injury? 10 Α. No. Have you ever published in the field 11 Ο. 12 of eye injuries? 13 Α. No. 14 Ο. Have you ever published anything 15 relating to an eye injury? 16 Α. Not that I can recall. 17 Q. Have you ever taught any courses on 18 injuries of the eye? 19 Α. No. 20 Have you ever conducted any peer Ο. 21 review studies involving traumatic eye injuries? 22 Α. No. 2.3 Q. Have you ever testified at trial about 24 eye injuries? 25 Not that I recall. Α.

1 Scher 26 2 Do you consider yourself an expert on Ο. 3 the anatomy of the eye? 4 Α. I feel I have specialized knowledge in 5 that. 6 Do you have any specified training in Ο. 7 that? Not specified training, no. 8 Α. 9 Q. What is the basis of your position 10 that you have specialized knowledge in the eye? 11 Α. Conducting research to come up to 12 speed to learn about the eye from biomechanical 13 engineering and anatomy literature. 14 Ο. Would you agree, sir, that an expert 15 as far as litigation is someone that has a 16 specialized background in way of training, 17 teaching, lecturing in the field? 18 MR. UGHETTA: Objection to form. 19 Α. Certainly an expert in court could 20 have those. 21 Q . Would you agree an expert in court 22 should have those to be deemed an expert? 2.3 MR. UGHETTA: Objection to form. 24 Α. I don't have an opinion one way or the 25 other. That sounds like something the court

1 Scher 27 2 would have an opinion on, not an engineer. 3 Is it fair to say other than your Ο. 4 independent reading you have done and studying 5 you have done and work you have done on your own 6 that you have no other specialized knowledge 7 regarding the anatomy of the eye? MR. UGHETTA: Objection to form. 8 9 Α. Certainly I have conducted my own 10 research on my own, yes, but other than that I don't have any specialized training in the eye. 11 12 Are you in any organizations relating Ο. 13 to the anatomy of the eye or injuries of the 14 eve? 15 Α. Maybe if you can be more specific. 16 Like an ophthalmologic association, Q. 17 anything like that? 18 No. I am not involved in any medical Α. 19 societies dealing with the eye. 20 Do you have any prior experience in Ο. 21 the designing of fitness products? 22 Α. Sure. 2.3 Q. Have you designed fitness products? 24 No, although I have helped companies Α. 25 with their designs and analyzing them.

1 Scher 28 2 But you, yourself, have never designed Ο. 3 a fitness product? 4 Α. That is correct. 5 Were you ever involved in the design Ο. 6 of any type of resistance band? 7 Α. No. 8 Have you ever published articles Ο. 9 relating to fitness products? 10 Α. No. Prior to your involvement in this case 11 Ο. 12 did you have any experience in designing a test 13 to evaluate injuries caused by resistance bands? 14 Α. No, and if I can go back to the last 15 question you asked, so you're asking about 16 fitness products and I just want to be clear I 17 am considering fitness products for -- and it's 18 an assumption I made, I am not sure I should 19 have made it, I separated then supporting goods 20 because certainly I have done a lot of research 21 and a lot of work in sporting goods, so if 22 sporting goods are considered fitness products, 2.3 and perhaps they should be, then the answer 24 should be yes. 25 Q. Let me rephrase that. Have you

1 Scher 29 2 published in the field of fitness products 3 unrelated to snow and alpine use? 4 Α. Sure. 5 What products have you published Ο. 6 regarding? 7 Α. For example, a reaction time study on baseballs. 8 9 Ο. Anything else? 10 Α. That is what comes to mind. 11 Is it fair to say that other than snow Ο. 12 and alpine products and other than a reaction 13 time study regarding baseballs you never 14 published with regard to any other type of 15 fitness product? 16 Α. No, that is not true either. 17 Ο. Can you tell me what fitness products 18 that you have published in that is not relating 19 to snow, sports or baseball reaction time? 20 Α. Sure. I published an article or an 21 article was published last year and the year 22 before that in ice hockey shoulder pads. 2.3 Q. Other than that anything else that you 24 published relating to fitness products? 25 Α. No, I think that is it.

DEITZ Court Reporting - A Lexitas Company 800-678-0166

1 Scher 30 2 I am just going to reask the guestion Ο. 3 because I want an answer to this specific 4 question as to whether or not you had prior 5 experience in designing a test to evaluate 6 injuries caused by resistance bands. 7 Α. Prior experience, no. 8 Did you ever conduct any testing on Ο. 9 resistance bands prior to this case? 10 Α. No. Did you ever design a testing system 11 Ο. 12 to test resistance bands prior to this case? 13 Α. No. 14 Ο. Is it fair to say that your 15 involvement in this litigation is the very first 16 time that you designed a testing system to 17 evaluate injuries sustained to an eye by a 18 resistance band? 19 Α. That was a lot. Can I have that read 20 back, sorry? 21 MR. SMILEY: Marleine, would you 22 mind reading it back? 2.3 (Whereupon, the question was read 24 back by the court reporter.) 25 MR. UGHETTA: Objection to form.

DEITZ Court Reporting - A Lexitas Company 800-678-0166

1 Scher 31 2 Yes, I think that is true. Α. 3 Prior to this case did you ever design Ο. 4 a test to evaluate eye injuries sustained by 5 projectiles? 6 Α. Did I design a test? 7 Ο. Yes. 8 Α. No. 9 Q. Would you consider the test that you 10 designed in this case a test to evaluate a projectile into an eye? 11 12 Α. I guess one could call it that. Ι 13 would call it biomechanical engineering testing 14 of a resistance band, so I would call it 15 something different but it's just my 16 terminology. Prior to this case were you ever 17 Ο. 18 involved in any way with any studies involving 19 projectile-producing injuries of the eye? 20 Α. No. 21 Q. We'll get to the studies that you list 22 as references in your report a little bit later 2.3 but is it fair to say that you have never been 24 involved in any types of studies of the type 25 that you have referenced in your report where

1 Scher 32 2 they evaluated trauma to the eye? 3 If you mean the peer-reviewed Α. 4 articles, no, I have not conducted studies like 5 those and peer-review articles referenced in my 6 report. 7 Ο. Prior to this case were you aware of a 8 resistance band without a door anchor causing a 9 user to go blind? 10 Not that I can think of, no. Α. Did you independently seek out that 11 Ο. 12 information as to whether or not someone using a resistance band without a door anchor ever 13 14 sustained an injury that rendered them blind? 15 Α. Sorry, can I have that question again? 16 Did you independently seek out, in Ο. 17 other words, do one of your own research or ask 18 counsel as to whether or not a user of a 19 resistance band was ever rendered blind by using a resistance band without a door anchor? 20 21 Α. Blind? No, I don't think I have seen 22 that. 2.3 Q. Did you make any attempt to find out 24 if that ever occurred prior to this case? 25 Α. Prior to this case, no.

DEITZ Court Reporting - A Lexitas Company 800-678-0166

1 Scher 33 2 Let me rephrase the question. Ο. 3 Did you make any attempts as part of 4 this case, as part of your analysis in this 5 case, to determine whether or not prior to Ms. 6 Nicolosi's accident a user of a resistance band 7 was ever rendered blind? 8 So, I think rendered blind is what I Α. 9 am having difficulty with. Maybe you can 10 explain to me what you mean exactly by that. 11 Ο. A significant injury to the eye such 12 that they were considered blind? 13 Α. Certainly I inquired about eye 14 injuries. I don't know if there is enough 15 detail to say whether someone was blind or not. 16 Did you inquire as to whether anyone Ο. 17 prior to Ms. Nicolosi had sustained a 18 significant eye injury while using a resistance 19 band? 20 Α. Yes. 21 Q. Tell me what inquiries you made? 22 I asked counsel if there was any Α. 2.3 information about that. I looked at Mr. Parks' 24 deposition and I also went to the NEISS 25 database.

1 Scher 34 2 What did you learn from the Parks EBT Ο. 3 as to whether or not a user prior to Ms. 4 Nicolosi sustained a significant eye injury from 5 using a resistance band? 6 Α. I think your question kind of got 7 garbled. You said the Parks and I missed a few 8 words. 9 Ο. What did you find out from your review 10 of the Parks deposition as to whether or not an 11 individual prior to Ms. Nicolosi sustained a 12 significant eye injury while using a resistance 13 band? 14 Α. It's my understanding that there were 15 previous eye injuries using resistance band. 16 Ο. Was that a band with or without a door 17 anchor? 18 I don't recall and I am not sure it Α. 19 was in there. 20 Was that of significance to you in Ο. 21 your analysis in this case as to whether or not 22 prior injuries to an eye that was sustained 2.3 while using a resistance band involved a door 24 anchor or not? 25 Α. It's certainly something I was

1 Scher 35 2 interested in. 3 Did you attempt to find out whether or Ο. 4 not any prior injuries sustained by users of 5 resistance bands to the eye involved door 6 anchors or not door anchors? 7 Α. I don't think there was enough data to determine whether injuries to the eye had door 8 9 anchors or whether there was door anchor 10 involvement at all. What did you learn from counsel as to 11 Ο. 12 whether or not users prior to Ms. Nicolosi 13 sustained significant eye injuries while using 14 resistance bands? 15 Α. I was referred to Mr. Parks' 16 deposition. 17 Ο. Were you advised by counsel as to 18 whether or not counsel was aware of prior instances before Ms. Nicolosi where users of 19 20 resistance bands sustained significant eye 21 injuries? 22 Α. I don't recall counsel telling me one 2.3 way or the other. 24 Ο. Now, you said there was a NEISS 25 database?

1 Scher 36 2 That is correct. Α. 3 Could you spell that acronym for me? Ο. 4 Α. N-E-I-S-S. 5 What does that represent? Ο. 6 That is the CPSC's National Electronic Α. 7 Injury Surveillance System database. What did you learn from looking at 8 Ο. 9 that database as to whether or not any 10 individual prior to Ms. Nicolosi's accident had 11 sustained significant eye injuries using a resistance band? 12 From that database I found that 13 Α. 14 fitness equipment creates eye injuries including 15 resistance bands and free weights and a variety 16 of home fitness equipment. There were previous 17 eye injuries labelled in the NEISS database as 18 resistance-band related. 19 Ο. Did you attempt to find out whether 20 any of those involved a door anchor or not? 21 Α. I did look through the comments in the 22 NEISS database and for the most part I could not 2.3 tell whether there was door anchor involvement 24 or not. 25 Ο. Of any of these prior instances that

1 Scher 37 2 you learned of either from counsel or the Parks' 3 deposition or the NEISS database did any of 4 those involve user doing biceps curls with a 5 resistance band resulting in an eye injury? 6 MR. UGHETTA: Objection to form. 7 Α. Not that I recall. Did you specifically look for that to 8 Ο. 9 see whether or not a biceps curl was the type of 10 exercise being performed at the time that the eye injury was sustained? 11 12 Α. I don't remember specifically looking 13 for biceps curl but I was looking for what the 14 user was doing in general but I don't recall 15 biceps curl in particular. 16 Do you recall in particular any Ο. 17 exercises that were being performed resulting in 18 an eye injury? 19 Α. No, I do not. 20 When you said you read a transcript of Ο. 21 Mr. Parks, what transcript was that, was that 22 from this case or a different case? 2.3 Α. That is from this case. 24 Ο. Did you read any other transcripts of 25 Mr. Parks from other cases?

1 Scher 38 2 I did not. Α. What were you retained to do in this 3 Ο. 4 case? What is your understanding of why you 5 were hired? 6 To conduct a biomechanical engineering Α. 7 analysis of Ms. Nicolosi's accident to assess 8 Dr. Tipton's alternate designs and to -- really 9 in particular to look at whether adding the door 10 anchor increased the likelihood of a significant eye injury. 11 12 So, if I understood your answer, there Ο. 13 are, basically, two aspects to your 14 understanding of why you were hired, one was to 15 assess Mr. Tipton's testimony, Dr. Tipton's 16 testimony regarding alternate designs, and the other as to whether or not the door anchor 17 18 increased the likelihood of injury to the eye? 19 MR. UGHETTA: Objection to form. 20 Generally, and I wouldn't just limit Α. 21 it to Dr. Tipton's alternate design but really 22 looking at what he did and assessing it biomechanically. 2.3 24 Ο. Were you asked to determine how it was 25 that she struck her eye doing a biceps curl to

1 Scher 39 2 analyze that? 3 Α. Maybe you can be more clear. I am not 4 sure what you mean. 5 Well, did you make a determination in Q. 6 your analysis of how it was that she struck her 7 eye doing the biceps curl with this resistance 8 band? 9 Α. I mean, generally some component of 10 the resistance band system contacted her eye, so I am not sure what you're asking here. 11 12 So, as a biomechanical engineer did Ο. 13 you perform an analysis to see how that 14 happened, how it went from position one before 15 she started the curl to position two where it 16 struck her in the eye? 17 Α. I mean, I guess generally you could Maybe I am not understanding the 18 say yes. question but, I mean, it's a biomechanical 19 20 analysis of what happened generally, so, yes, I 21 guess that would include that. 22 Ο. Can you tell me how it was that she 2.3 got struck in the eye by the resistance band 24 while doing a biceps curl, how that occurred? 25 Α. Sure. The resistance band door anchor

1 Scher 40 2 slipped out from under her foot and the 3 resistance band system came up and went toward 4 her face and contacted her eye. 5 Did your testing confirm that that is Q. what happened? 6 7 I mean, that is the testimony, that is Α. what we have, so it's consistent with that but I 8 9 don't think I proved that she got an eye injury 10 from either the resistance band. I think that is already a given. 11 12 Do you dispute that the resistance Ο. 13 band struck her eye during the process of her 14 doing a biceps curl? 15 Α. I believe that -- well, I don't know 16 if she was doing the curl at that point but I do 17 believe some component of the resistance band 18 system contacted her eye, sure. 19 Ο. Am I correct that the testing you 20 performed was unable to show how a component of 21 the resistance band struck her eye? 22 MR. UGHETTA: Objection to form. 2.3 Α. I disagree with that. 24 Ο. Did you put somewhere on your report 25 that it was unclear how a component of the

1 Scher 41 2 resistance band made contact with her eye? 3 Maybe I should be more clear. Α. Α 4 component contacted her eye. We don't know if 5 it's the resistance band door attachment or the 6 band itself or possibly even the handle. Ι 7 mean, that is a possibility here too but some 8 component of the resistance band system 9 contacted her eye. It's unclear which one of 10 those actually contacted her eye though. But from your testing you were not 11 Ο. 12 able to determine how the anchor or tubing would 13 contact the user at eye level, correct? 14 MR. UGHETTA: Objection to form. 15 Can we have that question read 16 back, please? 17 (Whereupon, the question was read 18 back by the court reporter.) 19 MR. UGHETTA: The same objection to form. 20 21 Α. So, I think you're probably referring 22 to a part in my report where I am talking about 2.3 someone who is using proper arm curl form and 24 someone who is using proper arm curl form as 25 described and illustrated in the manual, it's

1 Scher 42 2 unclear how someone could get part of the 3 resistance band system to contact their eye. Ιn 4 this case we know some parts of the resistance 5 band system did contact Ms. Nicolosi's eye 6 though. 7 So, you're saying if she did it Ο. 8 properly, it would not have contacted her eye, 9 correct? 10 If she was performing the arm curl Α. properly as demonstrated in illustrations and 11 12 words in the manual, it's highly unlikely that 13 the resistance band system would contact her 14 eve. 15 Q. That is based on your testing that you 16 determined that? 17 Α. The testing and my analyses. 18 Were you able in your testing to Q. 19 replicate how, in fact, that it did hit her eye? 20 The testing assumes that it hits her Α. 21 eye, so I am not trying to replicate her event 22 in my testing. 2.3 Q. My question specifically is whether or 24 not your testing attempted to replicate how she 25 was struck in the eye?

1 Scher 43 2 It's not a recreation if that is what Α. 3 you're asking. 4 Ο. That is not what I am asking. Can you 5 please try to answer my specific question? Did 6 your testing --7 MR. UGHETTA: One person at a time. 8 Would you like to ask another question, 9 qo ahead. 10 Specifically my question is whether or Ο. not you attempted in your testing to replicate 11 12 how it was that she was struck in the eye by the 13 resistance band? The testing relates to that but I did 14 Α. 15 not recreate her accident. 16 Did you attempt to determine in your Q. 17 testing how she was struck in the eye? 18 Again, I think I answered that Α. 19 question. 20 Is the answer no, you did not attempt Ο. 21 to recreate that? 22 It's not a recreation. What I did was Α. 2.3 test parameters that related to her getting 24 struck in the eye. 25 Q. As a biomechanical engineer do you

1 Scher 44 2 have the capability if you choose to undertake 3 it in this case to try and determine how it was 4 that she was struck in the eye by using the 5 resistance band doing a biceps curl? 6 Α. Sure. 7 Ο. Since you have that capability did you consider doing that in this case? 8 9 Α. Yes. 10 Did you take steps to try and Ο. replicate what happened in her case to show 11 12 during a biceps curl she could have been struck 13 in the eye? 14 Α. I did not replicate any testing but I 15 do believe I had some ideas of how she got 16 struck in the eye. 17 Ο. I am not asking whether or not you have ideas, I am asking whether or not you used 18 19 your capabilities as a biomechanical engineer to show how that happened, how during her 20 21 performance of the biceps curl she ended up 22 getting struck in the eye? 2.3 Α. So, I think the short answer here is 24 it's not possible with the information that we 25 had provided because there are inconsistencies.

1 Scher 45 2 In the end you cannot do that in this case. 3 Ο. Did you attempt to do that? 4 Α. Yes. 5 Were your attempts unsuccessful in Q. 6 reproducing what happens in Ms. Nicolosi's 7 accident? So, my issue here is in reproducing. 8 Α. 9 I did not try to reproduce her accident. 10 So, the answer is no, you did not try Ο. to reproduce what happened in her specific case? 11 12 I have not tried to recreate that in Α. 13 testing, no. I tried to look at parameters that 14 relate to her eye injury, her particular 15 instance. 16 Ο. Could you have tried to reproduce or recreate what occurred in her accident? 17 18 Α. Overall, no. In about five minutes 19 MR. UGHETTA: would it be able to take a break? 20 21 MR. SMILEY: Sure. 22 Let's talk about your test system, Ο. 2.3 okay? This was a custom built testing system; 2.4 is that correct? 25 Α. That is correct.

1 Scher 46 2 Was it of your design or someone else Ο. 3 within your company? Α. 4 Both. We worked together on it. 5 Ο. This was the first time that you and 6 your company designed this type of system? 7 Α. That is true. Is it fair to say that this testing 8 Ο. 9 system was designed solely for this litigation? 10 Α. Solely for this testing, yes. Solely for this litigation, right? 11 Ο. 12 Α. Sure, yes, the testing was done for 13 this particular case. 14 Ο. Prior to this case you never designed 15 any type of test to test resistance bands to see 16 what kind of injuries they would cause, correct? 17 Α. That is true. 18 You had, in fact, no experience in Ο. 19 doing that prior to this case, correct? I haven't done it before but in terms 20 Α. 21 of experience I believe it's just mechanical 22 design and I do have experience with that. 2.3 Q. But you had never done it before, 24 correct? 25 Mechanical, sure, I have. Α.

1 Scher 47 2 This type of testing, design, you had Ο. 3 never done it before, correct? 4 Α. For resistance band with this 5 particular apparatus I had not done it before 6 this case, that's correct. 7 Now, were you aware of other ways of Ο. testing injuries to the eye other than creating 8 9 a custom-built system? 10 Α. Sure. Did you consider using any of those 11 Ο. 12 other methods for testing injuries to the eye 13 that you were aware of were already in existence other than creating a custom built one? 14 15 Α. Sure. 16 Why did you not avail yourself of a Ο. 17 design that had already been used? 18 It would not be appropriate in this Α. 19 case. It would not have provided the testing that was necessary. You couldn't test with a 20 21 resistance band with those apparatus. 22 How do you know that? Ο. 2.3 Α. From the designs of the other tests 2.4 that are out there. 25 Q. Now, in the studies that you

1 Scher 48 2 referenced there were two Kennedy studies from 3 2006 and 2011? Α. 4 That's correct. 5 Did you see how they set up their Q. 6 testing to evaluate injuries to the eye? 7 Α. I did. Do you know how they did it in the 8 Ο. 9 2006 case? Do you recall that? 10 Α. I believe so. How did they set up the testing of 11 Ο. 12 loads to the eyeball in that case? 13 Α. I believe they launched a projectile 14 of the eye. 15 Q . What did they use to represent an eye 16 in that case? 17 Α. For their testing they used eyes. 18 Actual eyeballs, correct? Q. 19 Α. That is true. They placed it in a gelatin solution 20 Ο. 21 as well, do you recall that? 22 I do. Α. 2.3 Q. In 2011 in the Kennedy study do you 24 know how they tested loads on an eye? 25 Α. I believe in a similar fashion,

1 Scher 49 2 although it's mostly a review paper if I 3 remember correctly. 4 Ο. Do you recall their use of a FOCUS 5 system? 6 Α. They do discuss the FOCUS headform, 7 sure. You're familiar with the FOCUS 8 Ο. 9 headform? 10 Α. I am. 11 Were you familiar with the FOCUS Ο. 12 headform before you did your custom-built 13 testing in this case? 14 Α. Yes. 15 Q. Are you aware that the FOCUS headform 16 has been validated scientifically? 17 Α. I believe it has. 18 Are you aware that the FOCUS headform Ο. 19 had synthetic eye modules available for testing 20 with it? 21 Α. Sure. 22 You were aware that they had more than Ο. 2.3 one synthetic eye module available for testing? 2.4 Α. I don't recall that but it's certainly 25 possible.

1 Scher 50 2 Are you aware that that synthetic eye Ο. 3 module had load cells that came with that eye 4 module? 5 Α. It is an instrument headform, yes. 6 Ο. Are you aware that the synthetic eye 7 modules with the FOCUS headform have all been validated? 8 9 Α. I believe they have. 10 Was your testing system validated Ο. prior to being used in this case? 11 12 Α. The components all meet the 13 requirements and traceable. 14 Ο. Was your testing system validated for 15 the purpose that you were using it? 16 Α. Yes, I believe so. I think it meets 17 all of the standard mechanical engineer 18 principles. There is nothing exotic about it. 19 Ο. Has any entity within the scientific 20 community validated your testing system as a 21 system that can scientifically predict 22 likelihood of projectile injury to an eyeball? 2.3 MR. UGHETTA: Objection to form. 24 Α. As you stated it, no. 25 Q. However, the synthetic eye module by

1 Scher 51 Humanetics with the FOCUS headform has been 2 3 validated to predict injuries sustained to the 4 eyeball, correct? 5 I think you have a mistake in that Α. 6 question, sorry. 7 Ο. The synthetic eye modules that are used with the Humanetics headform that we have 8 9 spoken about, those have been validated? 10 Are you talking about Humanetics? Α. 11 Yes. I am pronouncing it wrong? Ο. 12 That is fine. Α. 13 Ο. So, the FOCUS headform in the 14 synthetic eye module that is from a company 15 called that I have been mispronouncing 16 Humanetics, right? 17 Α. I just want to make sure we're talking 18 about the same thing. 19 Q. Humanetics, right? 20 Α. Correct. 21 Is it your understanding that the Q. 22 headform and the synthetic eye modules have been 2.3 validated within the scientific community to 24 show that they accurately replicate forces upon 25 the eyeball?

1 Scher 52 2 That is my understanding, yes. Α. 3 Is there anything that is in your Ο. 4 custom testing system been shown to be validated 5 to accurately predict loads upon the eyeball? 6 Objection to form. MR. UGHETTA: 7 Α. No. MR. UGHETTA: 9:30 can we take a 8 9 quick break? 10 MR. SMILEY: Sure. (Whereupon, a recess was taken.) 11 12 Ο. The FOCUS headform and synthetic eye 13 module were used in the 2011 Kennedy study, 14 correct? 15 Α. I believe the FOCUS headform was in 16 that, yes. 17 Q. That study was published and peer 18 reviewed, right? 19 Α. Certainly published. I think it's a 20 report for the military. 21 Q . Do you know if it was peer reviewed? 22 I am not sure. I think it was but I Α. 2.3 am not a hundred percent sure. 24 Ο. Now, is there a reason that you didn't 25 use the FOCUS head system, headform system?

1 Scher 53 2 Α. Yes. 3 What is that? Ο. 4 Α. Well, first off, there is more than a 5 24 week lead time to order a FOCUS head system, 6 it's well over a hundred thousand dollars to get 7 an instrument headform, they are not part of a lease program and then from what I understand 8 9 it's a non-trivial dead acquisition system 10 application for the headform. Did you actually make an inquiry to 11 Q. 12 try and get the FOCUS headform to use for this 13 evaluation? 14 Α. I did inquire with Humanetics, yes. 15 Q. Do you have anything back from them in 16 writing? 17 Α. No. I just made a phone call to our 18 contact over there. 19 Ο. So, initially you thought it would 20 have been a good idea to use the FOCUS headform 21 for your testing? 22 It was something that I considered. Α. 2.3 Q. Cost was a concern for you? 24 The FOCUS headform is well over Α. Yes. 25 a hundred thousand dollars from what I

1 Scher 54 2 understand. 3 Ο. Did you discuss the extra cost with 4 counsel? 5 Α. No. 6 Ο. Has cost been a concern to you in your 7 work on this case? I am always cost-conscious. 8 Α. 9 Ο. Do you know what your total billing 10 has been on this case so far for this company? 11 Α. I do not. 12 Would it be fair to say it's in excess Ο. 13 of \$60,000 already? 14 Α. It may be. 15 Q. Other than the FOCUS headform did you 16 look into any other type of synthetic modules to 17 use for your analysis in this case? 18 That was the main one. Α. No. 19 Q . Are you aware of any other way of 20 evaluating an eye injury other than how you set 21 it up in your custom system and other than by 22 using a FOCUS headform? 2.3 Α. So, just to be clear, in my test 24 apparatus I am using that eventually to look at 25 eye injury but I am looking at the mechanical

1 Scher 55 2 properties of the resistance band in my testing, 3 so you keep saying it as if I am using it to 4 directly calculate eye injury likelihood. There 5 are multiple steps and that is just the 6 mechanical portion of my analysis. 7 Ο. Was your testing meant to be predictive of likely outcome of eye injuries? 8 9 Α. It could be used down that path but in 10 and of itself it does not provide that 11 information. 12 Did you use that in your analysis to Ο. 13 determine whether or not Ms. Nicolosi would 14 likely sustain a greater injury from a door 15 anchor or from just the band without the door 16 anchor? 17 Α. Greater injury? 18 Q. Yes. 19 Α. No. 20 Do you have an opinion as to whether Ο. 21 or not contact with her eye of the door anchor 22 ball as opposed to the band itself would cause a 2.3 greater or lesser injury? 24 Both have the potential to create Α. 25 significant eye injuries.
1 Scher 56 2 Does one have the potential to cause Ο. 3 greater injury than the other in light of its 4 physical properties? 5 I am having trouble with greater than. Α. 6 Maybe you can explain what you mean because I'm 7 just not getting it. 8 Would you agree there are varying Ο. 9 types of injuries that the eyeball can sustain 10 when hit with an object? There are different injuries an eye 11 Α. 12 can sustain, sure. 13 Q. Some are greater than others, correct? 14 Α. What do you mean by greater? 15 Q. Well, more severe. 16 Α. What is more severe than another? 17 Q. Well, you put in pretty good detail 18 within your report various injuries of the eye, 19 right? You comment on different injuries of the 20 eve? 21 Α. There are different injuries, yes. 22 Would you agree some are more severe Ο. 23 than others? 24 Α. I think they are all significant eye 25 injuries. You know, I don't have an opinion of

1 Scher 57 2 what is more severe than one of the other ones. 3 So, you have no opinion as to whether Ο. 4 or not an anchor ball could result in a more 5 severe injury to an eyeball than an elastic 6 resistance band without an anchor ball that 7 strikes the eye? 8 I think both can create significant Α. 9 eye injuries. 10 My specific question is whether or not Ο. you have an opinion as to whether the anchor 11 12 ball can cause more severe injury than just the 13 rubber elastic band itself? 14 Α. Again, both can. I don't think there 15 is one is greater than or more severe than the 16 other. I think both can create significant eye 17 injuries. 18 So, you have no opinion on whether one Ο. 19 can be more severe than the other as far as injury producing? 20 21 Α. I think they both can produce severe 22 I don't think unless you give me some injuries. 2.3 metric to talk about more severe, I don't think 24 there is any way we can determine one or the 25 other.

1 Scher 58 2 For example, a scratch on the eyeball Ο. 3 as opposed to a global rupture, using those two 4 examples, would you agree a global rupture of 5 the eyeball is more severe than a scratch on the 6 eveball? 7 Α. I would agree with that. 8 So, do you know whether or not the Ο. 9 anchor ball would more likely than not cause a 10 global rupture upon impact than the resistance 11 band material itself contacting the eye? 12 Α. I think they are equally as likely. 13 Q. So, to be clear, you don't have an 14 opinion that one or the other is more or less 15 likely to cause a greater injury to the eyeball? 16 Α. That is right. They are equally 17 likely to. 18 Now, the system that you custom-built Ο. 19 didn't use eyeballs, correct? 20 Α. That is true. 21 Q. It didn't use anything to recreate the 22 properties of an eyeball, correct? 2.3 Α. That is true. 24 Ο. You set up a system for the resistance 25 band and door anchor to strike an aluminum

1 Scher 59 2 plate; is that correct? 3 That is right. The resistance band Α. 4 and/or door anchor would come with and contact 5 an aluminum plate. 6 Does an aluminum plate accurately Ο. 7 represent an eyeball? 8 No, but that is not the point of doing Α. 9 that in the test. 10 Ο. A plate is flat where an eyeball is convex, correct? 11 12 Α. That is true. 13 Q. Did you consider that different at all 14 in your custom built testing system? 15 Α. T did. 16 Would that have a change at all in Ο. 17 your analysis whether or not the resistance band 18 or door anchor struck a flat aluminum plate as 19 opposed to a convex eyeball type material? In the testing that I have done I 20 Α. 21 don't think it makes a significant difference. 22 I think for the purpose of my testing flat 2.3 aluminum plate was adequate. 24 Ο. Prior to your custom-built system have 25 you ever seen any study or publication where

1 Scher 60 2 loads to an eye were measured using an aluminum 3 plate? 4 Α. Not that I recall but it's not the 5 point of the aluminum plate in my test. 6 Is it fair to say that prior to your Ο. 7 custom-built test you have never seen any studies of trauma to the eye utilize a plate 8 9 instead of some type of synthetic eye or actual 10 eye in the testing, correct? 11 MR. UGHETTA: Objection to the 12 form. 13 Α. So, again, that is not the point of 14 the aluminum plate in my test but, no, I haven't 15 seen that in the literature. 16 Did you consider at all trying to Ο. 17 replicate either the size, the shape or the 18 material qualities of an eyeball for your 19 testing in this case? 20 Α. I did consider it, yes. 21 Q. Did you make any attempts to try and 22 replicate an eyeball either in size, shape or 23 material properties for your testing? 24 Α. It was not necessary for my analysis, 25 so, no, I did not.

1	Scher 61
2	Q. What are the average dimensions of a
3	human eyeball? Do you know that off the top of
4	your head?
5	A. Off the top of my head approximately
6	an inch in diameter but I am going to go to the
7	literature in my file. The 2014 Beckerman
8	article has a nice table of eye dimensions for
9	right and left. I will give you the right eye
10	because it's on the left column here. In the
11	transverse direction it's about 24.156
12	millimeters on average and in the sagittal plane
13	it's approximately 23.799 millimeters on
14	average.
15	Q. Do you think the results of your
16	testing would have been any different if you had
17	used a FOCUS headfoam with a synthetic eye
18	module as opposed to an aluminum plate?
19	MR. UGHETTA: Objection to form.
20	The thing is your keep presupposing he
21	did some sort of test that has anything
22	to do with your question. I am just
23	going to keep objecting to it.
24	MR. SMILEY: They are all preserved
25	as you know, Jim.

1 Scher 62 2 For the purposes of my testing and how Α. 3 I used the data, no. 4 Ο. Do you think the results would have 5 been the same? 6 I think the overall results and Α. 7 conclusions, yes. The FOCUS headform has an orbital rim 8 Ο. 9 that can be assessed, correct? I don't recall. 10 Α. Did you have anything in your testing 11 Ο. 12 system to see what, if anything, impact the 13 resistance band or anchor ball would have on the orbital rim? 14 15 Α. No. That was not the point of my 16 testing. 17 Q. Do you think that the effective mass of the tubing of the resistance band would have 18 19 been lower using a FOCUS headform than using the aluminum plate in your testing setup? 20 21 Α. No, I do not. 22 Do you think the results for the Ο. 2.3 effective mass of the door anchor would have 24 been the same if you used the headform? 25 Α. I believe so.

1 Scher 63 2 What were the dimensions of the Ο. 3 aluminum plate in your testing system? 4 Α. I don't recall off the top of my head. 5 I want to say maybe a quarter inch thick, maybe 6 ten inches by eight inches but I don't recall 7 off the top of my head. It's more of a guess or 8 an estimate. 9 Ο. Do you have it in your file, that 10 information? I do not. 11 Α. 12 Do you record that as part of your Ο. 13 analysis? 14 Α. No. 15 Q. Isn't proper scientific analysis of a 16 custom-built setup to record the size and 17 dimensions of what is used in that setup? 18 One can if one wants. I don't think Α. 19 it's necessary. 20 Do you have an opinion as to whether Ο. 21 or not the length, width or thickness of the 22 aluminum plate would make any difference in the 2.3 results of your testing? 2.4 Α. They could. 25 Ο. Did you consider different dimensions

1 Scher 64 2 for the aluminum plate? 3 Α. I did. 4 Ο. What are the dimensions that you 5 considered using? 6 A smaller aluminum plate. Α. 7 Ο. How small? I want to say maybe half of the width. 8 Α. 9 Q. Just that? Anything else that would 10 make it smaller other than half the width? That is what I considered. 11 Α. 12 Why didn't you use that other size? Ο. 13 Α. It would have been much harder to hit 14 the plate and get any kind of repeatable results 15 with a smaller plate. 16 Do you know what the difference would Ο. 17 have been in the data received if you had used 18 that smaller plate? 19 Α. We may not have been able to collect 20 data in many cases, so you may have very 21 different files because there may be some that 22 are empty. 2.3 Q. Well, do you agree that if you used a 24 different size plate, different dimension plate, 25 that you could get different data in the testing

1 Scher 65 2 as a result of that? 3 Sure. For example, let's take the Α. 4 door anchor cases, if the door anchor misses the 5 plate, you're not going to collect any data, so 6 just like if the door anchor misses the head, 7 it's not going to apply a force to the eye, so the data could be different. 8 9 Ο. What about the impact on the size of 10 the plate, if the impact is spread amongst a 11 larger plate as opposed to impacted among the 12 spread of the smaller plate, would that effect 13 the data? 14 Α. It could for some impacts. 15 Q. Did you run different testing with 16 different size plates to evaluate the different loads? 17 18 There were two different size plates. Α. 19 Q. You ran data with two different size 20 plates? 21 Α. Yes. 22 Did you give us data for both of those Ο. 23 plates? 24 Α. Yes. 25 Q. Did you define that on what you

1 Scher 66 2 provided us as to one was using one size plate 3 and one was using a different size plate? 4 Α. Yes, and it should be obvious from the 5 videos or the test where the door anchor goes to 6 the side of a plate and then the band, the 7 resistance band, contacts the plate, that plate is a different size than the other tests. 8 9 Ο. What were the dimensions of that 10 plate? 11 Α. I don't recall. 12 Did you project the door anchor Ο. 13 directly into that smaller size plate or did you 14 only use the smaller size plate so that the door 15 anchor could pass it? 16 Α. The smaller plate was used so that the 17 door anchor would miss the plate and the band 18 would contact. 19 Ο. Did you have the door anchor hit that 20 smaller plate so you could compare the data 21 received between the door anchor hitting the 22 smaller plate and a larger plate? 23 Α. No. 24 Ο. You could have done that though, 25 right?

1 Scher 67 2 I could have but the results would be Α. 3 exactly the same. 4 Ο. We don't know that, do we? 5 I am very confident based on the Α. 6 principles of mechanical engineering that it would be the same. 7 But you don't have anything to show 8 Ο. 9 for that other than your confidence as far as 10 data, correct? Based on my mechanical engineering 11 Α. 12 experience it would be the same. I don't have 13 any data from testing to show that. 14 Ο. So, you're not able to tell whether or 15 not a really large plate being hit by the door 16 anchor would have the same exact data as a 17 really small plate being hit by the door anchor, 18 correct? 19 MR. UGHETTA: Objection to form. 20 Α. It would be the same. 21 But you don't have any data to show Q. 22 the difference, right? 2.3 Α. I don't have any testing data to show 24 that, that is correct. 25 Q. There is no other way as far as any

DEITZ Court Reporting - A Lexitas Company 800-678-0166

1 Scher 68 2 outside validation of the system you set up to 3 determine whether or not what you're saying is 4 true as far as loads onto those different size 5 plates, right? 6 Objection to form. MR. UGHETTA: 7 Α. Sure. Someone could test it. Has someone tested it? 8 Ο. 9 Α. Not that I know of. 10 Ο. So, we don't know what you're saying is accurate, right, because we haven't seen 11 12 anything to validate it? 13 Α. Based on the principles of mechanical 14 engineering it would be the same. 15 Q. But that is just your word saying it 16 would be the same, correct? 17 MR. UGHETTA: He wasn't done. You don't have to test Newton's laws 18 Α. 19 over and over again to show they work. They 20 have been tested for hundreds of years in the 21 same vein, same mechanical engineering 22 principles hold, so I don't have to reinvent the 2.3 wheel each time. I am confident it would be the 24 same. 25 Q. In your custom-built system at no time

1 Scher 69 2 did you use any different size or shape plate or 3 other material to record the load of the door 4 anchor or resistance band, correct? 5 No, that is wrong. Α. 6 You did use different sizes to record Ο. 7 the loads? 8 We just talked about that, yes. Α. 9 Ο. I am not talking about doing it so 10 that the door anchor could pass it, I am talking about recreating the exact same scenario in your 11 12 testing, one using a larger plate and one using 13 either a smaller or different shape or different 14 material device to receive the load, you did not 15 do any type of that comparison, correct? 16 Α. No. 17 MR. UGHETTA: Can I ask who is in 18 the room with you guys? 19 MR. SMILEY: So, we have the court 20 reporter and we have the technician here 21 running this. 22 Okay, thank you. MR. UGHETTA: We 2.3 never got who was in the room. 24 MR. SMILEY: Brontus, can you show 25 yourself so he can see?

1	Scher 70
2	MR. UGHETTA: That is okay, I saw
3	him earlier. Usually everybody
4	introduces themselves, okay.
5	Q. Dr. Scher, just to be clear on your
6	last answer of no, am I correct that at no time
7	in your testing in this case did you
8	specifically do the exact same projectile into
9	different size or shape plates to see what, if
10	any, difference there would be in the data
11	received?
12	A. How you asked it the answer is I have
13	but I think what you're getting at is did I do a
14	pair test with the same thing with different
15	size plates and then the answer is no.
16	Q. How can you be sure that the aluminum
17	plate you used is the scientifically accurate
18	method for determining potential loads in
19	subsequent injuries to an eyeball?
20	MR. UGHETTA: Objection to form.
21	A. That was not the purpose of using it.
22	Q. Well, ultimately don't you form
23	opinions as to the extent of injury Ms. Nicolosi
24	would be expected to sustain from either a door
25	anchor or a resistance band?

1 Scher 71 2 Ultimately I am looking at injury Α. 3 likelihood. 4 Ο. Injury likelihood to an eyeball, 5 correct? 6 To an eye, correct. Α. 7 Ο. So, since you're looking at injury likelihood to an eye, how can you be sure that 8 9 the aluminum plate you used is a scientifically 10 accurate method for determining potential loads and injuries to an eyeball? 11 12 MR. UGHETTA: Objection to form. 13 Α. Again, that is not the purpose of 14 using the aluminum plate. It's to look at the 15 mechanical properties if you will for the mechanical system and then using that in the 16 rest of the biomechanical engineering analysis. 17 18 How is the load cell connected to the Ο. test frame? 19 It's bolted to a piece of 8020 which 20 Α. 21 is another piece of aluminum. 22 Ο. So, you have the aluminum plate, then 2.3 you had another piece of aluminum and then you 24 had the load cell connected to that? 25 Α. No, no, you have the frame and

1 Scher 72 2 included in the frame I quess you could call it 3 part of the frame if you want is a bar, the load 4 cell bolts to the bar and then the aluminum 5 plate bolts to the load cell. 6 What type of load cell is used? Ο. 7 Α. Let me see which one we used in that. I don't remember off the top of my head. One 8 9 second. That was an interface load cell with a 10 range of 500 pounds and a resolution of 0.015 11 pounds. 12 Ο. Why did you select that load cell for 13 this testing? 14 Α. Ample resolution and enough range to 15 capture anything that I thought I would need to 16 capture. 17 Ο. Did you take any steps to validate 18 that your design of attaching a load cell to an 19 aluminum plate would accurately measure forces 20 sustained by a human eyeball? 21 Α. Again, that is not the point of the 22 aluminum plate or the load cell. It's to 2.3 measure the mechanical properties of the system, 24 so the answer is no. 25 Q. Would you agree that a large plate

1 Scher 73 2 connected to a load cell may not reflect a load 3 cell connected to an eye? 4 MR. UGHETTA: Objection to form. 5 Α. They may be different, sure. 6 Now, the entire length of tubing can Ο. 7 hit a plate but only a small amount of tubing can hit an eyeball, correct? 8 9 Α. Sure. It depends on the size of your 10 plate. Did you consider that might have an 11 Ο. 12 impact on the data that you obtained? 13 Α. I did. 14 Ο. Did you consider that the data may not 15 accurately reflect what could happen to a user 16 of a resistance band struck in the eye by a 17 resistance band? 18 Objection to form. MR. UGHETTA: 19 Α. Again, the point of the plate is not 20 to do that. I believe for assessing mechanical 21 properties in whatever it's testing is adequate. 22 Ο. What was the mass of the plate? 2.3 Α. I don't recall. 24 Ο. Do you have that data saved anywhere? 25 Α. I don't know that I even weighed it.

1 Scher 74 2 Were the load cell measurements Ο. 3 compensated for by the inertia of the plate? 4 Α. The inertia of the plate? Yes. 5 Ο. How? We zero the load cell for the data. 6 Α. 7 Q. How do you do that? You take data with nothing applied to 8 Α. 9 the load cell but the plate. 10 Ο. You recorded that? That is part of the initial process 11 Α. 12 when you do the data acquisition, so it's 13 internal to every data file that you have. Do you have to make some calculated 14 Ο. 15 adjustment for that to flow through your data? 16 Α. It's part of the data acquisition No. 17 system. 18 What system is that? Q. 19 Α. That is a DTS nano slice system. 20 Was your custom testing design Ο. 21 scientifically validated to show produced reliable results? 22 2.3 Α. I don't think there is any particular 24 validation to do that. I believe using my 25 engineering experience it would produce valid

DEITZ Court Reporting - A Lexitas Company 800-678-0166

Page 75 December 7, 2017

1 Scher 75 2 results. 3 Ο. But there are ways to validate testing 4 systems to see if the results are accurate, 5 right? 6 The load cell was -- has a missed Α. 7 traceable calibration. The data activation 8 system is calibrated annually. I am not sure 9 what other validation you're asking for but the 10 system measures accurately. 11 Are you aware, sir, if you can answer Ο. 12 yes or no, of whether or not your testing system 13 could have been validated by anyone outside of 14 your company to show that it produced reliable 15 results? 16 Α. I believe the components are in your terms validated or I would call them calibrated. 17 18 That is not my question. My question Ο. 19 specifically is about validation. You know what 20 validation is, right? 21 Α. Maybe you can explain it to me because 22 I think we have a misunderstanding here. 2.3 Ο. Have you ever heard in your line of 24 work as to whether something has been validated? 25 Α. Sure.

1 Scher 76 2 For example, we spoke of the headform Ο. 3 in the synthetic eye modules being validated, 4 correct? 5 We may have. Α. 6 What that means is that they have been Ο. 7 shown to give reliable results through outside 8 confirmation somehow; isn't that fair to say? 9 Α. I am not sure that is exactly right. 10 Well, what is your understanding of Ο. what it means as a scientist if you go to use a 11 12 crash test on me that says that it's been 13 validated? What is your understanding of what 14 that means? 15 Α. So, it's not just would produce 16 reliable results, so you do the same thing 17 twice, you get a consistent result but validated 18 to me would also have some aspect of being able 19 to be biofidelic, so it's going to produce a 20 response similar to what you're -- what you 21 would like to measure but you can't, so, for 22 example, if a crash test dummy is a surrogate 2.3 for a human and so it's validated in various 24 crash responses to perform like a human. 25 Q. So, how was your custom-built system

1 Scher 77 2 validated to show that it performs like a human 3 being doing biceps curls with a resistance band? 4 Α. Well, it's not validated for that 5 It's -- the system was used to assess purpose. 6 the mechanical properties of the resistance band 7 under an application like a curl maneuver and in that case there is no validation. 8 9 Ο. Would you agree that your testing 10 system has not been validated to reliably show 11 results of what would happen with a person doing 12 a biceps curl? 13 MR. UGHETTA: Objection to form. 14 Α. I disagree with the premise because 15 you're asking something that is -- the question 16 is kind of wrong. The system is calibrated and 17 in the end there is no validation for the 18 system. 19 Q. So, the answer is no, it's not been 20 validated as a system in any way, correct? 21 MR. UGHETTA: Objection to form. 22 There would be no validation for that Α. 23 system --24 Ο. So --25 Α. -- as we have discussed.

1 Scher 78 2 You're saying that system can't be Ο. 3 validated? 4 Α. In the way we were just talking about 5 validation I don't think there is a validation. 6 You did not publish the results of Ο. 7 this testing in this case, did you? 8 Α. No. 9 Ο. Your testing in this case wasn't peer 10 reviewed, was it? 11 Α. It was not. Was anybody outside of your company 12 Ο. 13 brought in to confirm the setup of your testing to say that they felt it was a proper way to 14 15 achieve your goals? 16 Α. No, not that I can think of. 17 Ο. Do you know what the error rate was of your testing? 18 19 Α. Yes. 20 What was your error rate? Ο. 21 Α. For speed I would say approximately 22 three miles per hour, for the force measurements 2.3 it's going to be in the ballpark of 0.03 pounds. 2.4 How do you determine those error Ο. 25 rates?

1 Scher 79 2 That is the reliable resolution of the Α. 3 equipment. 4 Ο. Where do you get that information 5 from? 6 Well, for the load cell it's from the Α. 7 calibration of the equipment. For the speed which is taken from the high speed camera it's 8 9 based on the frame rate and the pixels per inch 10 but the actual camera it seems. So, you're talking about the error 11 Ο. 12 rates for the equipment you use to measure force 13 and speed, right? 14 Α. That is right. 15 Q. I am asking whether or not there is an 16 error rate for your system that you custom-built 17 as a whole, not for the individual units? 18 I think those are the error rates for Α. 19 the system as well. 20 Ο. Is that all of the information you can 21 give me regarding error rates for your 22 custom-built system? 2.3 Α. That I can think of. If I think of 24 more, I will let you know. 25 Q. Did you consult with anyone or any

DEITZ Court Reporting - A Lexitas Company 800-678-0166

1 Scher 80 2 company that previously conducted testing on eye 3 injuries sustained by projectiles? 4 Α. No. 5 Did you consider doing computer Ο. 6 modelling in this case, finite element 7 modelling? I did not. 8 Α. 9 Q. Why not? 10 I didn't think it was the appropriate Α. tool to assess this particular event. 11 12 Did your testing system accurately Ο. recreate Ms. Nicolosi's accident? 13 14 MR. UGHETTA: Objection to form. 15 Α. So, if you mean the testing frame, the 16 load cell and all of that, again, that is not a 17 recreation of her accident, it's to get the 18 mechanical properties related to someone doing a 19 curl, an individual her size doing that, it's not a recreation of her accident. 20 21 Q . So, would the answer be no, your 22 testing system did not accurately recreate Ms. 2.3 Nicolosi's accident? 24 MR. UGHETTA: Objection. Ιt 25 presupposes that is what the test system

DEITZ Court Reporting - A Lexitas Company 800-678-0166

1 Scher 81 2 is for. I object to the form. 3 Α. I think I answered that with the last 4 question so. 5 Ο. Respectfully I don't think you did. 6 It's either yes or no. Was this testing system 7 an accurate recreation of Ms. Nicolosi's accident? 8 9 MR. UGHETTA: Can I have the question read back, please? 10 11 (Whereupon, the question was read 12 back by the court reporter.) 13 MR. UGHETTA: Objection to form. 14 Α. Again, that wasn't the point of the 15 testing apparatus. It's not a recreation of Ms. 16 Nicolosi's accident, so, I mean, that is my 17 answer. 18 Ο. So, your answer is no, the 19 custom-built system you designed did not recreate Ms. Nicolosi's accident, correct? 20 21 MR. UGHETTA: Objection to form. 22 I believe I answered it, what, twice Α. 23 now. 24 Ο. You didn't. That is why I keep asking 25 it, Dr. Scher.

1	Scher 82
2	Am I correct, yes or no, and then I
3	will move on, am I correct, yes or no, that your
4	testing system did not recreate Ms. Nicolosi's
5	accident?
6	A. I think I have answered that. I don't
7	think a yes or no provides an adequate answer to
8	your question.
9	Q. I think it does, so can you answer
10	that yes or no? Are you saying you cannot
11	answer my question yes or no?
12	A. Mr. Smiley, I believe I have answered
13	the question a few times now and I am sorry
14	you're not happy with the answer but that is my
15	answer.
16	Q. The reason, sir, I am not happy is
17	because you're not answering my question, so I
18	am going to keep asking it respectfully until
19	you answer it. Regardless of what the goal was
20	of your testing, whether your goal was to
21	recreate it or not, my specific question is
22	whether or not your testing system accurately
23	recreated Ms. Nicolosi's accident; yes or no?
24	A. Again, for what the fifth time now the
25	purpose of the testing is not to recreate her

1 Scher 83 2 accident but to look at the mechanical 3 properties of the system, resistance band 4 system, when someone of her size uses the 5 resistance band for an arm curl. 6 Ο. So, the answer is no then, correct, 7 that it did not recreate her accident? 8 Α. I believe I have answered it, I am 9 sorry. 10 Well, we're going to stay here until Ο. you give me a clear answer because all of your 11 12 answers are saying I believe I answered it and 13 then you go off with a different explanation. I 14 am going to keep asking the guestion. It calls 15 for a yes or no? 16 MR. UGHETTA: Don't argue, just ask 17 the question again. Maybe if you want to 18 try to qualify it a different way, maybe 19 if you change the words a little bit 20 maybe but he believes he's answered it, 21 you don't, so ask another question. 22 Dr. Scher, whether or not you intended Ο. for it to recreate Ms. Nicolosi's accident or 2.3 24 not, would you agree that your testing system 25 did not recreate Ms. Nicolosi's accident?

1 Scher 84 2 I believe I have answered it. Α. Again, 3 it wasn't the point of it and so I don't believe 4 it does recreate her accident. 5 At the time of her accident were her Ο. 6 hands moving or static when the ball came out 7 from under her foot? We don't know for sure but from what 8 Α. 9 she testified to I believe they were moving. 10 In your testing design were the Ο. handgrips moving or static during the course of 11 12 your testing? 13 Α. They were stationary. 14 Ο. So, that would be different than what 15 you believe she was doing at the time of her 16 accident, correct? The grip configuration or the grip 17 Α. condition would be different if her hands were 18 19 moving in the accident. 20 Was Ms. Nicolosi pulling straight up Ο. 21 or was she pulling back toward herself at the 22 time that the ball released from under her foot? We don't know for sure but I think she 2.3 Α. 24 was probably pulling more up. 25 Q. What is your basis for saying that?

DEITZ Court Reporting - A Lexitas Company 800-678-0166

1	Scher 85
2	A. Looking at how it's possible that the
3	resistance band system came in contact with her
4	eye and based on my experience testing not with
5	the test setup but with the resistance band
6	outside of the test setup.
7	Q. You tested the resistance band outside
8	of the test setup?
9	A. Yes.
10	Q. How did you do that?
11	A. By using the resistance band under my
12	foot in various conditions with other people in
13	my office under their feet in various conditions
14	and seeing where the resistance band system went
15	when it was released from under their foot or my
16	foot.
17	Q. Did you record any of that data?
18	A. I did not record that testing, no.
19	Q. Did you photograph it or videotape it?
20	A. I did not.
21	Q. Did you make notes of it?
22	A. I did not.
23	Q. Why not?
24	A. I didn't think it was necessary.
25	Q. Is it fair to say that that testing

1 Scher 86 2 you're referring to that was not recorded in any 3 way was the only actual attempt to replicate 4 what happened as far as how the resistance band 5 was used by Ms. Nicolosi? 6 I don't think that was to replicate Α. 7 what Ms. Nicolosi was doing at the time of her 8 accident. 9 Ο. So, you believe that she was pulling 10 straight up, is that what you're saying, at the 11 time that the ball released? 12 MR. UGHETTA: Objection to form. 13 Α. Not in the manner that you just done 14 at your conference room table but, yes, I 15 believe it's more upward in her accident. 16 The basis for your opinion is on this Ο. 17 testing you did that you didn't record or 18 document in any way where either you or your 19 staff attempted to use the resistance band? 20 Partly on that, partly on the test Α. 21 setup, partly on her body mechanics, her body 22 size orientation. 2.3 Q. What about her body mechanics? 24 Α. If she were to use the proper 25 mechanics from the manual and she was in the

1 Scher 87 2 position illustrated and described in the 3 manual, the resistance band system would not 4 contact her eye, so I was trying to determine or 5 look at what could happen. 6 Did you do any testing to demonstrate Ο. 7 or prove what you just testified to that had she 8 done it properly, that it wouldn't have hit her 9 eye? 10 I believe my analysis is in my report. Α. Tell me specifically how you tested 11 Ο. 12 that theory that if she had done it properly, it 13 wouldn't have hit her eye? 14 Α. Sure. So, I think the first part of 15 the analysis is looking at the force vectors 16 which is described in my report. The second 17 part is if you look at what is in the manual and 18 you place the resistance band tubing under the 19 arch of the foot, that it would not come out 20 from under the foot. I have tested that myself. 21 I have looked at that with other people in my 22 We were looking at how it would be office. 2.3 possible and in the end following proper body 24 mechanics shown in illustrations and words in 25 the manual the resistance band does not come out

1 Scher 88 2 from under the foot, it stays under the foot and 3 if the foot does somehow come up off the ground, 4 the resistance band comes back in between the 5 legs. 6 So, that is the second time you have Ο. 7 referred to your own testing and the testing with your office that you do with the resistance 8 9 band. Would you agree that that individual 10 testing that you did was significant to your 11 opinions in this case? 12 It's something that I considered. Α. 13 Ο. Why didn't you mention that anywhere 14 in your report or record any of that data 15 anywhere then? 16 Α. I don't think there is data for that 17 but the analysis is shown where the force vector 18 is. It's shown in my report. I talk about it. 19 Ο. Did you consider Ms. Nicolosi's weight 20 in your analysis? 21 Α. I considered it. 22 What was her weight? Ο. 23 Α. I believe about 115 pounds. 24 Where did you get that information Ο. 25 from?

1 Scher 89 2 I thought she testified to it but I Α. 3 will take a look. Maybe it's in the medical 4 records as well. 5 Q. That is all right. I don't need you 6 to look it up if that is okay. 7 Why was the consideration of her 8 weight a factor? 9 Α. It was something I considered. 10 Ο. Why --11 But I am not sure -- sorry, please. Α. 12 Why did you consider her weight? Ο. 13 What, if any, effect would that have on your 14 analysis? 15 Α. I was considering her whole body size, so height and weight go into that. 16 17 Q . Specifically how does the weight go 18 into your analysis? 19 Α. I don't think it plays a large part 20 but I certainly considered it. 21 Q. Did it play any part in your analysis? 22 In the end I don't think it did. Α. 2.3 Q. When she was stepping on the ball 24 during the exercise she had weight on it, 25 correct?

1 Scher 90 2 I am not sure of that. Α. 3 Would that be a factor to consider Ο. 4 whether or not she was applying weight onto the 5 ball while doing the exercise? 6 Something I considered, sure. Α. 7 Ο. So, you did consider that? 8 That she was applying weight to the Α. 9 door anchor ball as she was stepping on it. 10 Ο. Yes? Yes. 11 Α. 12 The shoe in your testing that you used Ο. 13 that was unweighted, correct? That is true. 14 Α. 15 Q. Did you consider the fact that if Ms. 16 Nicolosi was placing weight on the ball while 17 doing the exercise and the shoe in your testing 18 system was unweighted, that that might account 19 for any difference in the data? 20 Yes, and I account for that by putting Α. 21 a solid piece of wood into the shoe to keep it 22 rigid. 2.3 Q. How does putting a solid piece of wood 24 in the shoe account for the weight that Ms. 25 Nicolosi would have been applying, if any, to

1 Scher 91 2 the ball? 3 MR. UGHETTA: Objection to form. 4 Α. Because if she is applying weight to 5 the anchor ball when she is stepping on it, her 6 foot is going to remain, I am going to use the 7 term flat, but I don't mean flat to the ground, I mean not bending up into a dorsal flexion if 8 9 that makes sense, it's not bending back. I am 10 going to illustrate. So, if she is applying 11 weight, then the shoe is not going to bend up at 12 the tip. If you don't have something in the 13 shoe to keep it rigidly, again, I am using the 14 term flat but I don't mean flat to the ground, 15 then you could get different kinematics for the 16 band system leaving the shoe area. 17 Q. Was any pressure applied to the ball 18 as the band was being pulled upwards in your 19 testing? 20 There was some pressure between the Α. 21 ball and the shoe in some cases, yes. 22 How much pressure was applied? Ο. 2.3 Α. I don't know. 24 Would the amount of pressure applied 0. 25 to the ball by the shoe before it is released
1 Scher 92 2 have an impact on the data results? 3 Maybe a small effect but I don't Α. 4 believe it would be a large one. 5 Did you measure any differences in Q. 6 your testing as far as different amounts of 7 weight placed on the ball before it was released? 8 9 Α. There were no weights placed on the 10 ball. 11 How much did the wood piece weigh? Ο. 12 I am not sure. Α. 13 Q. Did you measure that? I did not. 14 Α. 15 Q . How did you determine Ms. Nicolosi's 16 height was five feet? 17 Α. I believe she testified to that. 18 Did you look at her medicals as well Q. 19 to look for her height? I did. I don't recall it in there but 20 Α. 21 I am pretty certain that she said it in her 22 deposition. 2.3 Q . Did you see in medical records where 24 it says she was five foot six? 25 Α. I saw something like that but I am

DEITZ Court Reporting - A Lexitas Company 800-678-0166

1 Scher 93 2 going to go off her deposition testimony. Ι 3 think she would probably know best. 4 Ο. Did you do your testing at any other 5 heights other than assuming a height of five 6 feet? 7 Α. I did not do any other testing where I assumed she was a different height. 8 9 Ο. Would that have changed the data if 10 you set up your testing to reflect that she was a different height other than five feet tall? 11 12 Α. If she were 5-6, it could make a 13 difference. If she is 5-1 or 4-11, I don't 14 think it's going to make much of a difference. 15 Q . Did you consider changing the testing 16 setup so that you could see what, if any, 17 difference would occur by changing your height 18 for Ms. Nicolosi in your analysis? 19 Α. I did consider it. 20 Did you take any steps to try and do Ο. 21 that? 22 I did not. Α. 2.3 Q. Did you consider her shoe size or the 24 type of tread under her sole? 25 Α. Yes and yes.

1 Scher 94 2 What was her shoe size? Ο. 3 I believe a size seven woman. Α. Is that the type of shoe that you 4 Ο. 5 used? 6 No. Α. 7 Ο. What size shoe did you use? It was slightly larger. I don't 8 Α. 9 remember the exercise. 10 Why didn't you use the same shoe size Ο. as Ms. Nicolosi's for your test? 11 12 Α. It was what I had available in my lab. 13 Q. Did you consider buying a shoe to 14 match her size? 15 Α. I did and, actually, I was waiting for 16 her shoes, Ms. Nicolosi's shoes, to be provided 17 to us for inspection. I had asked on multiple 18 occasions. I was told that there were multiple 19 pairs it could be, I asked to see the multiple 20 pairs and that never happened, so these were 21 around the time I needed to test with what I 22 had. 2.3 Q. Would you agree that if you used a 24 different size shoe, that might have a change in 25 the data obtained?

1 Scher 95 Α. 2 Well, it's possible. I doubt it 3 would. 4 Ο. We don't know that though, right? 5 I can't see mechanically how it would Α. 6 make any significant difference. 7 Ο. Did you try different shoes in your 8 testing? 9 Α. I did not. 10 What about the tread on the sole, Ο. 11 whether it's a worn tread or a grippy tread, would what make a difference in the data? 12 I doubt it would make much of a 13 Α. difference at all. 14 15 Q . Did you simulate a biceps curl in your 16 testing, an actual curling movement? 17 Α. No, not the curling movement, just the 18 amount of stretch related to a curl for someone of Ms. Nicolosi's size. 19 20 At any time at any part of the Ο. 21 custom-built testing system was anything done to 22 try and simulate how the grips would move during 2.3 a biceps curl? 24 The testing incorporates that to some Α. 25 degree with the different amount of stretch, the

1 Scher 96 2 length or the distance between the shoe and 3 where the grips are but there is no mechanical 4 motion of the grips in my testing. 5 Now, for your testing you estimated Q. 6 the general body configuration; is that correct? 7 Α. That's correct. 8 Did you change the body configuration Ο. 9 throughout the course of your testing to see how 10 that changed the data? The same body positioning if you will 11 Α. 12 was used. That is not clear. I assume she was 13 the same size throughout my testing, assumed 14 that she was using proper form because that is 15 what she testified to, so all of the testing 16 setups were assuming those. 17 Ο. Did you shift it at all to see what, 18 if any, difference it would make if you moved 19 the foot a little one way or moved where you 20 expected her arms would be another way? Did you 21 do any modification throughout the course of 22 your testing? 2.3 Α. That is internal to the testing 24 because I tested three different levels of where 25 the grips were so that would be incorporated in

1 Scher 97 2 that. 3 Other than changing the levels of the Ο. 4 grips did you do anything else to simulate a 5 change in her body configuration in your 6 testing? 7 Α. No. 8 Would you agree that if you did take Ο. 9 steps to change her body configuration, that 10 that could change the results of your testing? 11 It could slightly. Α. 12 Ο. Did you change the approximate 13 distances that you used between the floor and the various parts of the body in your testing? 14 15 Α. Between the floor -- I am sorry, one 16 more time, the floor and the various? 17 Q. Parts of the body. I believe that is 18 on page 12 of your report. 19 Α. Let me go to that. Okay, where are 20 you at? 21 Q . If you could look at page 12 of your 22 report. 23 Α. I am there. 24 Ο. Do you see under testing setup in that 25 paragraph?

1 Scher 98 2 I am at that paragraph. Α. 3 So, if you look at the next page under Ο. 4 figure seven. 5 Okay, I am there. Α. 6 The last sentence under that figure do Ο. 7 you see where it says, quote, general body configuration and approximate distances between 8 9 the floor and padded grips or eyes for female of 10 Ms. Nicolosi's height performing arm curls as shown in the Bellfit manual, quote. 11 12 I see that. Α. 13 Q. So, my question, sir, did you change 14 those approximate distances between the floor 15 and the padded grips or eyes in your testing 16 setup during your testing? 17 Α. Right, so I tested between 38 and 48 inches, so, yes, I did change the grip height, 18 19 the amount of stretch in the band. 20 Did you change the approximate Ο. 21 distances between the floor and where the eyes would be? 22 2.3 Α. No. 24 Ο. Did you consider doing that? 25 Α. I did consider it.

1 Scher 99 2 You chose not to change that? Ο. 3 I don't believe it would make much of Α. 4 a difference at all within the reasonable range 5 of what we have here. 6 Now, if you could go to page 15 of Ο. 7 your report, please. 8 Α. I am there. 9 Q. On figure eight? 10 MR. UGHETTA: Five minutes. MR. SMILEY: Yes, five minutes 11 12 we'll take another break. 13 Q. Do you see under where it says testing results? 14 Α. 15 On page 15, yes. 16 Do you see where it says, quote, Ο. testing was not conducted for the door anchor 17 18 condition with the padded grips at shoulder 19 height because the door anchor ball showed signs 20 of damage from repeated contacts with the 21 aluminum plate, quote? 22 Α. Yes. 2.3 Q. So, is it fair to say you have data to 24 report with regard to the door anchor hitting 25 the aluminum plate with the grips at shoulder

1 Scher 100 2 height? 3 Α. That is true. 4 Ο. In the case of Ms. Nicolosi could that 5 have been when she suffered her injury with the 6 grips at shoulder height? 7 Α. It's possible. If that is what happened in her case, 8 Ο. 9 you have no data to offer relative to that 10 setup, correct? MR. UGHETTA: Can I have that read 11 12 back, please? 13 (Whereupon, the question was read 14 back by the court reporter.) 15 Α. I disagree with that. 16 How many tests did you conduct with Ο. 17 the door anchor? 18 I don't know, I mean, let me take a Α. 19 look, I think 25 unless I miscounted. My review I see you did six using the 20 Ο. 21 door anchor at a flexion of 90 degrees and 3 at a flexion of 135 degrees? 22 2.3 Α. Those are nine of the tests with the 24 door anchor, sure. 25 Q. Did you do testing at other degrees

1	Scher 101
2	with the door anchor?
3	A. Yeah, so fully flexed if you look at
4	test 32 through 36.
5	Q. Could you point to me where in the
6	digital files those results are, tests 32 to 36?
7	A. So, you received the data before.
8	That would be on the hard drive. We can go to a
9	summary of the data. Let's go to folder 14
10	analysis, sub-folder testing data analysis.
11	Let's go to folder D, initial impacts only, and
12	then let's go to file one, data logs, initial,
13	and then you will have test number, test
14	condition, a variety of information for you.
15	THE WITNESS: Is this a good time?
16	MR. SMILEY: Yes. Why don't we do
17	it now. We seem to do good with a break
18	on the hour. Another five minutes?
19	THE WITNESS: Yes.
20	MR. UGHETTA: Yes.
21	(Whereupon, a recess was taken.)
22	Q. So, you had to stop some of the
23	testing with the anchor ball because the ball
24	itself was damaged; is that correct?
25	A. I am sorry, were you breaking up

1 Scher 102 2 there. You kind of got garbled. 3 So, you had to stop some of the Ο. 4 testing relating to the anchor ball because the 5 anchor ball was damaged; is that correct? 6 Α. I am sorry to ask you one more time, I 7 am sorry, my apologies. 8 Am I correct that you had to stop your Ο. 9 testing of the anchor ball, the ball itself had 10 sustained damage? Right. Yes, so I didn't want to test 11 Α. 12 with it fully flexed because the ball was 13 starting to crack from repeated impacts. Did you think it might be relevant 14 Ο. 15 what the results would be for the fully flexed position? 16 17 Α. It could be. 18 Well, did you think it would be Ο. 19 relevant, not whether it could or couldn't be, did you think it would be relevant what the 20 21 results would be? 22 I certainly would rather have the data Α. 2.3 than not but in the end the resistance band, the 24 exemplar, was extremely hard to find. I was 25 more afraid of breaking the only exemplar I

1 Scher 103 2 could get than pushing the data and trying to 3 get the fully flexed position. 4 Ο. So, you would agree this was a 5 significant limitation of your testing that you 6 weren't able to follow through with it to see 7 what the results would have been in the fully flexed position, correct? 8 9 MR. UGHETTA: Objection. 10 I disagree. I think I was able to Α. conduct my analysis even without that. 11 12 Ο. Did you try to get another ball to use 13 to continue with the testing? I tried to find another exemplar but 14 Α. 15 this was the only one I could find. 16 Ο. Did you take any photographs of the 17 damage sustained by the anchor ball from your 18 testing? 19 Α. No, I did not. 20 Can you describe what kind of damage Ο. 21 it sustained? 22 Α. Sure. MR. UGHETTA: He can show you. 2.3 24 It's one of the items he brought. 25 MR. SMILEY: Okay.

1 Scher 104 2 I don't know if this will come through Α. 3 on the video --4 Ο. Doctor, if I can stop just because 5 we're not recording this, so it's not going to be of benefit just if you can show me now. 6 Ιf 7 you can describe the damage that you see and then what I would ask you to do is to provide 8 9 that to Mr. Ughetta and we would ask Mr. Ughetta 10 to keep that so we may take a look at it prior to trial if that is okay? 11 MR. UGHETTA: Sure. 12 13 Α. The ball portion of the door 14 attachment has cracks. 15 Q. Was that of significance to you at all 16 that the anchor ball suffered cracks from the 17 repeated testing? 18 Was it of significance to me? Α. Yes, 19 because I didn't want to break the ball in 20 subsequent testing and use the only exemplar 21 that I had. There was also some chipping of the 22 material kind of on the internal portion of the 2.3 hole that goes through the ball. 24 Did you observe when it first started 0. 25 to sustain any damage during the course of your

1 Scher 105 2 testing? 3 Α. Yes. 4 Ο. When was the very first time you 5 observed any damage to the ball during the 6 course of the testing? 7 Α. I think the first time I saw it was during the next to last 90 degree test, so that 8 9 would be test 16. 10 Then how long did you continue to use Ο. it for test 16? 11 12 Α. For the rest of the testing. 13 Ο. Did you consider that the ball in any 14 way having sustained damage would change the 15 data obtained in subsequent tests using a ball 16 that had damage on it? 17 Α. It had some small amount of damage and 18 I don't believe it would make a difference. Ιt 19 wasn't until we got the crack and the chipping 20 that I thought it would make a difference and 21 that I was really afraid that it would no longer 22 survive another impact. 2.3 Q. Based on your analysis would you 24 expect that anchor ball to sustain damage if it 25 was repeatedly struck against an eyeball?

1 Scher 106 2 I don't know, maybe not. I am not Α. 3 sure. 4 Ο. Did the band sustain any damage from 5 your testing? 6 Α. Not that I saw, no. 7 Ο. Was it of any significance to you that 8 the anchor ball sustained damage in the testing 9 but the band itself did not sustain any damage? 10 Α. No. Did your testing system take into 11 Ο. 12 consideration the change in trajectory of the 13 band, if any, from the addition or removal of the door anchor attachment? 14 15 Α. Did you say did I consider it? 16 Q. No. 17 Did your testing take into consideration the change in trajectory if at all 18 19 from when the door anchor was on to when it was 20 not on? 21 Α. It's a weird question. I am not sure 22 I really get it because I tested without the 2.3 door anchor and the trajectory is the 24 trajectory, so I am not sure what you mean. 25 Q. I will try and see if I can clarify.

DEITZ Court Reporting - A Lexitas Company 800-678-0166

1 Scher 107 2 If I understood your testing correct, the ball 3 was held down and released kind of like a 4 slingshot and it shot straight up to the 5 aluminum plate; is that fair to say? 6 Α. Which test because there is different 7 initial configurations? 8 The trajectory was, basically, a Ο. 9 vertical straight up and down; is that fair to 10 say? That is not exactly true too. 11 Α. It's 12 mostly but. 13 My question is if you consider this Q. 14 axis of going straight up and down and assuming 15 that one way is looking at the ball and the band 16 going vertically straight up and another would 17 be with the ball moving off that access further 18 away from the user and another would be the band 19 and ball moving on the access closer to the 20 user, all right, that change with what I'm 21 defining as a change in axis between straight 22 up, moving forward and moving back, did you take 2.3 measurements of that change in movement off of 24 that axis in your testing? 25 Α. You keep saying change in movements.

1 Scher 108 2 I am not sure what you're referring to. 3 So, did you observe whether or not in Ο. 4 different testing the band as it shot upwards 5 toward the plate appeared to move further away 6 from the user, move closer to the user or 7 whether it stayed in the same relative line 8 going up and down? 9 Α. For the most part the band or the band 10 involved moved upward and slightly forward. Did you measure that movement forward 11 Ο. 12 in any of the tests to see whether or not there 13 was a difference in the amount of movement forward in the different tests that were run? 14 15 Α. No, I did not measure that. 16 Did you take any measurements to see Ο. what, if any, difference there was in movement 17 18 of the band forward, backwards or neither 19 relative to whether the door anchor was on or off? 20 21 Α. No, no direct measurements but we have 22 contact with the plate in each of those cases 2.3 and it's generally in that small 24 forward/backward dimension of the plate. 25 Q. I am sorry, I don't understand what

DEITZ Court Reporting - A Lexitas Company 800-678-0166

1	Scher 109
2	you mean by the forward/backward dimension of
3	the plate. Can you explain that for me?
4	A. Sure. You're asking what the motion
5	is forward or backward of the band or the ball
6	when it's released and both the band and the
7	ball hit the plate with the plate in the same
8	spot, so it's within that range of where the
9	plate is. A few inches forward of the load
10	cell, a few inches behind the load cell.
11	Q. Did you notice whether there was any
12	difference even if it's miniscule between the
13	movement in one direction or another as to when
14	the anchor ball was on or when it was off?
15	A. I didn't notice. We didn't measure
16	that, no.
17	Q. Directing you to page 17 of your
18	report under the section where it says
19	discussion considering testing results?
20	A. I am there.
21	MR. UGHETTA: Page 17?
22	MR. SMILEY: Yes.
23	Q. In that first paragraph you state,
24	quote, from the tests it is unclear how the door
25	anchor or tubing would contact the eye of a user

1 Scher 110 2 as it reached eye level. Despite this the 3 analysis assumed that the door anchor or the 4 tubing would contact the user's eye when it 5 reached eye height, guote. Do you see that? 6 Α. I do. 7 Ο. Is it fair to interpret that statement as meaning your testing did not show that the 8 9 anchor or the tubing would contact the user's 10 eye? 11 So, this is something I wasn't clear Α. 12 enough with in my report I think. The point 13 here is in proper arm curl configuration or body positioning as described in the Bellfit user's 14 15 manual, so if you're using proper technique and 16 it's unclear how it would hit the user's eye, I 17 don't think it would, so if the user is not 18 using proper technique, not in that 19 configuration, then it could, so I wasn't clear 20 enough in my report on that point. 21 Q . Did you attempt to change the 22 configuration of your testing to show what 2.3 position a user would have to be in for the band 24 tubing or the door anchor to hit the user in the 25 eye?

1	Scher 111
2	A. So, it's not based on the testing with
3	the testing frame per se, it's more all part of
4	my analysis then the answer is yes.
5	Q. How did you go about changing the
6	configuration to demonstrate how it could
7	contact the user's eye?
8	A. So, if the user were leaning forward
9	so the front foot is not anterior to the head
10	but it's now underneath or maybe even inferior
11	to the head, then that would work for the band
12	coming up and contacting the eye, especially if
13	the user were looking down toward the foot or
14	the toe region.
15	Q. So, if a person were to take the band
16	and put it under their foot and have their head
17	in alignment with their foot looking down to do
18	the curl, that could cause it to hit them in the
19	eye?
20	A. I can't see where your foot is but,
21	hopefully, you can see mine, leaning forward so
22	the person's eyes and head are forward of the
23	foot, so weighting the front foot and pulling up
24	leaning down.
25	Q. So, in that configuration that could

1 Scher 112 2 cause the band or the anchor to hit the user in 3 the eye? 4 Α. I believe so. 5 How much forward of the foot would the Ο. 6 eyes have to be for the band or the anchor to 7 hit a user in the eye? 8 Not very far forward. We're talking a Α. 9 few inches. 10 Ο. What if the user had their eyes, I know you probably can't see here, but what if 11 12 the user had their eyes aligned up directly over 13 the foot so that they were looking down at their 14 foot, would that be enough for the band or the 15 ball to hit them in the eye? 16 Α. I can't tell where your feet are in 17 that but if the user's body is bent forward, so 18 you're in more forward flexion, here we go. Ι 19 can see. So, if my head, if my forehead is 20 Ο. 21 lined up with the tip of my foot, would that be 22 enough of a position like this, my head is down 2.3 looking down at the point of my foot, doing a 24 biceps curl, would that be enough of a position 25 to cause the band to strike me in the eye or the

1 Scher 113 2 anchor ball to strike me in the eye? 3 I think that is still unlikely. Α. Ι 4 think you need to move your head forward a 5 little bit more, at least that's the way it 6 looks in the video. 7 Ο. How much forward technically since you 8 ran these tests are you able to determine 9 someone's eyes would have to be relative to 10 their front right foot for the band or the door anchor to hit them in the eye? 11 12 Α. I can't give you an exact number but a 13 few inches forward of the toe region of the 14 foot. 15 Q. Did you line up where you had the toe 16 of the shoe in your testing setup to where the 17 aluminum plate was struck in the various points 18 of your testing to see how straight aligned that 19 was? 20 I am sorry, I don't understand. Α. 21 So, during your testing the band and Q. 22 anchor ball struck the plate in different spots; 2.3 is that fair to say? 24 Α. Yes. 25 Q. Did you line up any of those spots of

1 Scher 1142 impact with the aluminum plate to the toe of the 3 shoe that you were using to see whether or not 4 it was a straight line up and down, to see 5 whether it was forward or see whether it was 6 behind? 7 Α. So, I didn't measure that. It was 8 within the plate region forward and backward and 9 also left and right if I am understanding your 10 question. So, the ball and the band hit various 11 Ο. parts within the four corners of that aluminum 12 13 plate; is that fair to say? 14 Α. Yes. 15 Ο. It hit some straight in the middle, it 16 hit some more towards one end and more towards 17 the other end; is that fair to say? 18 Α. Yes. 19 Ο. Did any of those points of that plate 20 line up directly above the sneaker you used? 21 Α. I think some of them may have, yes. 22 So, if someone's head were in that Ο. 2.3 position where the plate was where it was struck 24 by the band or ball, that head only had to be in 25 line directly above where the shoe is to sustain

1 Scher 115 2 the injury to the eye; is that fair to say? 3 In those cases, yes, the eye would be Α. 4 along that projected path. 5 So, any user of this resistance band Q. 6 if they were looking down and had their head 7 directly in line over that right front foot was in risk of being struck in the eye by the band 8 9 or the anchor ball; is that fair to say? 10 MR. UGHETTA: Objection to form. So, no, if you're using proper form 11 Α. 12 that is in the Bellfit manual, again, as 13 illustrated and written, then that would not be 14 possible. If you're in incorrect form or you're 15 leaning forward, the eyes are forward of the toe 16 region, even if the head is to the left or to 17 the right or something like that, then there is the possibility of contact. 18 19 Ο. So, if I am a new user to the resistance band and ball, I never used it 20 21 before, I never worked out in a gym and I don't 22 do it exactly in the position shown in the 23 manual which is with your head straight up and 24 your right foot forward but instead because I am 25 not following it as great as I maybe should be,

1 Scher 116 2 I lean forward a bit and I project my head over 3 maybe to see how I am lined up and I do a pull 4 like this with improper form, this could result 5 in the band or ball striking me in the eye, is that fair to say? 6 7 MR. UGHETTA: Objection to form. 8 So, in the position that you are in Α. 9 there you are going to need to move forward 10 more, at least the way it looks in the camera, you need your eyes forward of the toe, so it 11 12 might be the angle of this camera, maybe a 13 little forward but, yeah, I mean, that is the 14 idea, if your eyes are forward even if they're a 15 little to the left or to the right of the toe, 16 it's possible because the band doesn't just come 17 up straight up, it has a slight angle or it can 18 have a slight angle. 19 Ο. That is based on your custom-built 20 system that you set up, it shows that if the 21 head is in line looking down at the shoe, that 22 it would be in the zone where it could be struck 23 by the band or the anchor ball, correct? 24 MR. UGHETTA: Objection to form. 25 So, not just the testing setup there Α.

1 Scher 117 2 but also my testing or informal testing with the 3 band where I am releasing it where other people 4 in the office are looking at it, my familiarity 5 now with the band. 6 The videos that you took showed the Ο. 7 door anchor shoots straight up upon release; is 8 that fair to say? 9 Α. It's generally straight up. I mean, 10 it may have some small angle to it. It certainly moves slightly forward relative to the 11 foot. 12 13 Ο. What material was the anchor ball made of? 14 15 Α. I don't know exactly. It's some 16 polymer but I am not sure what exactly it is. Isn't that within your realm as a 17 Q. 18 biomechanical engineer to analyze materials? 19 Α. I could but I didn't in this case. 20 Do you know what any type of the Ο. 21 material was that made up that ball? 22 I don't. Α. 2.3 Q. Do you know whether it had any 24 elasticity as part of it? 25 Α. It's not as solid as aluminum, so I

1 Scher 118 2 imagine there is some elasticity but it's pretty 3 hard too. I don't know. 4 Ο. Did you think that would be important 5 in your testing to know what the material of the 6 anchor ball was? 7 Α. No. Did you think it would be important to 8 Ο. 9 know what the elasticity of any of that anchor ball was? 10 No. 11 Α. 12 Do you know if the type of material Ο. 13 that would go into an anchor ball could make a 14 difference on the extent or severity of injury 15 upon impact with an eyeball? 16 Α. I haven't seen data to support that. 17 Ο. So, whether or not something is hard plastic or soft rubber would that make a 18 19 difference in the degree of trauma it could cause upon hitting an eyeball? 20 21 Α. I haven't seen that either. 22 Did you look into that? Ο. 2.3 Α. I did. 24 You didn't find anything that comments Ο. 25 on the type of material of the object striking

1 Scher 119 2 the eyeball what difference that would make? 3 Α. No. The main factors that relate to 4 eye injury are mass, velocity and projected 5 kinetic energy or normalized kinetic energy, 6 sorry. 7 Ο. What material was the resistance band made of? 8 9 Α. I believe some type of latex or 10 rubber. I don't know exactly. You don't know what type of material 11 Ο. the resistance band was made of? 12 13 Α. Not specifically, no. I believe some latex or rubber combination. 14 15 Q. Did you try to determine what the 16 material was made of? 17 Α. No. 18 Did you make any inquiries to Ο. 19 determine what type of material the anchor ball was or what type of material the resistance band 20 21 was? 22 I did not. Α. 2.3 Q. Did you compare the qualities of the 24 materials of the anchor ball and the elastic 25 band?

1 Scher 120 2 In what sense? Α. 3 In any sense. Did you compare the Ο. 4 material qualities? 5 Α. Sure I did. 6 Tell me what you did to compare them? Ο. 7 Α. I felt both of them. I looked at both of them. 8 9 Ο. Anything else that you did to compare 10 the material qualities between the anchor ball 11 and the band? 12 Α. No. 13 Q . Do you know what a blunt object is? 14 Α. Generally. 15 Q. What is your understanding of what a 16 blunt object is? 17 Α. In biomechanical engineering we use 18 the term blunt object as something that contacts 19 the body that does not have a sharp edge that 20 would lacerate so that it penetrates or slices 21 into the body. It's more of a flat impact if 22 you will. 2.3 Q. Do you know if that is the same 24 definition or understanding of what a blunt 25 object is referred to in the medical literature?

1 Scher 121 2 I am not sure. Α. 3 Would you consider the anchor ball to Ο. 4 be a blunt object? 5 Α. I would. 6 Would you consider the resistance band Ο. 7 to be a blunt object? I would. 8 Α. 9 Q. Can you look at page 21 of your 10 report, please? Α. I am there. 11 12 Do you see the section entitled eye Ο. 13 anatomy? I do. 14 Α. 15 Q. Where did you get the language for 16 this paragraph in your report under where it 17 says eye anatomy and above that diagram of the 18 eve? 19 Α. That would be from my research on the 20 internet looking at articles, doing general 21 research on the eye. 22 Prior to your involvement in this case Ο. 2.3 and prior to looking anything up did you know 24 all of this information in your head such that 25 you could have put it down in your report about

1 Scher 122 2 the eye anatomy? 3 Α. I knew some of it. I don't know if I 4 knew all of it. 5 Q. Where did you go for your research to 6 get this information that you put in your 7 report? Again, to the internet, to journal 8 Α. 9 articles, to medical websites, to biomechanical 10 engineering literature. 11 Did you do that yourself or did Ο. 12 someone else on your staff do that portion of 13 the report for you? Both, Dr. Linus Stefan and I worked on 14 Α. 15 it together. 16 Ο. So, the two of you worked jointly on this paragraph? 17 18 I would agree with that. Α. 19 Ο. Does that individual that you just 20 referred to have any medical training? 21 Α. No, a Ph.D. in biomechanical 22 engineering. 2.3 Q . Did you consult with any physicians as 24 part of your analysis in this case? 25 Α. I don't think so, not in this case,

1 Scher 123 2 no. 3 Now, the next page 22 if you could Ο. 4 turn to that? 5 Α. I am there. 6 Ο. Do you see the paragraph a few down 7 that started with the word hyphema is characterized by blood in the interior chamber? 8 9 Α. I see that. 10 Where did you get the information for Ο. this paragraph contained in your report? 11 12 The same research that I did for the Α. 13 eye. 14 Ο. Can you give me the name specifically 15 of any of the websites or publications or 16 journals you went to for this information? I don't recall off the top of my head. 17 Α. 18 I know there was something from I want to say 19 AAO -- no, AOS, American Ophthalmology Society, 20 I think. I don't recall what specific websites, 21 no. 22 Did you have to have any special Ο. 2.3 credentials to get into those websites to get 24 that information? 25 Α. I don't recall.

1 Scher 124 2 I saw in the materials that you Ο. 3 reviewed that you reviewed a report from Dr. 4 Frommer who evaluated Stella Nicolosi; is that 5 correct? 6 I believe that is the IME. Α. Let me 7 just take a look. Yes. Did anything in this report go into 8 Ο. 9 your analysis and opinions in this case? 10 Α. Yes. 11 What part? Ο. 12 Α. He discusses what pathologies Ms. 13 Nicolosi sustained and so those were things I 14 looked at in my report. 15 Q . Did the pathologies that you see that 16 Ms. Nicolosi sustained have any relevance to 17 your testing and analysis in this case? 18 Α. My analysis, yes. 19 Q . How so? 20 Well, I provide likelihood of various Α. 21 injuries, for example, hyphema or lens 22 dislocation in my report. 2.3 Q. Do you see on page 2 under physical 24 examination of Dr. Frommer's report about six 25 lines down where he indicates that she had a

1 Scher 125 2 surgical pupil in the right eye which was 3 nonreactive? 4 Α. I see that. 5 Do you know what a nonreactive pupil Q. 6 in the right eye means? 7 Α. Not specifically, no. Do you know what the causes are for a 8 Ο. 9 nonreactive pupil? 10 No. My assumption is that the pupil Α. 11 doesn't react for open or closed light but I 12 don't know. 13 Ο. Did you look into that as part of your 14 analysis as to what could have caused her to 15 have a nonreactive pupil? 16 Α. I did not. 17 Ο. On page 24 of your report, please. 18 Α. One second, let me go back. All 19 right, I am with you. 20 Ο. If you can go down to the paragraph 21 that says Dr. Tipton. 22 Does it start Dr. Tipton testified? Α. 2.3 Q. Yes. 24 Α. I am there. 25 Q. Do you see where it says, quote, in

1 Scher 126 2 the middle of that paragraph, I am sorry, quote, 3 from my examination of the subject resistance 4 band system, there is no physical evidence on 5 the door anchor or tubing that was a signature of contact with Ms. Nicolosi's eye, quote. 6 7 Α. Yes. What type of physical evidence would 8 Ο. 9 you expect to see on the door anchor or tubing 10 that would be a signature of contact with Ms. Nicolosi's eye? 11 12 I am not sure there would be one. Α. Ι 13 think the point is that there is nothing on there that would indicate what contacted the 14 15 eye. 16 Ο. What could there be that would 17 indicate anything to you as to what contacted 18 the eye? 19 Α. Well, for example, and I throw this out as a possibility, if the door anchor ball 20 21 had contacted say only her orbital rim and 22 created a fracture, the force and energy may 2.3 have been sufficient to chip or crack the anchor 24 We don't see that. She doesn't have that ball. 25 fracture but that could be a signature that was

1 Scher 127 2 shown on the anchor ball that would be 3 consistent with her injury. 4 Ο. Are you aware of any incident where an 5 anchor ball was cracked as a result of impacting any part of a user of a resistance band? 6 7 Α. Not that I can think of, no. 8 Now, you say on the other hand, quote, Ο. 9 Ms. Nicolosi's injuries can be used as physical 10 evidence. Her medical records did not show evidence of significant contact on the orbital 11 12 rim, just contact with the eyeball, quote. Do 13 you see that? 14 Α. I do. 15 Q. Are you saying that the evidence that 16 you reviewed only showed contact with the 17 eyeball itself, is that what you're referring to 18 here? 19 Α. That is right, the medical records don't have any evidence of significant contact 20 21 to any area around the eye. 22 What is the orbital rim? What do you Ο. 2.3 mean by that? 24 Α. That is the bony structure that 25 surrounds the eye.
1 Scher 128 2 Would that be the part between the Ο. 3 eyeball and the bridge of the nose? Would that 4 be part of the orbital rim? 5 Α. You could include it but I am thinking 6 more the superior and inferior portions that are 7 part of the frontal and maxillary bones. Would the tissue below the eyeball be 8 0. 9 what you're referring to part of the orbital 10 rim? 11 Α. The bony structure, yes. 12 What type of evidence would you expect Ο. 13 to see if there was contact with the orbital rim? 14 15 Α. A fracture in that area. If there was 16 significant contact and we have seen this in 17 other injuries, other cases, that there is 18 fracturing and damage to the orbital rim. 19 Ο. Would you expect to see anything short 20 of a fracture such as bruising or discoloration 21 of the orbital rim if she was struck by the 22 anchor ball? 2.3 Α. If that struck there, sure, although 24 bruising is not necessarily a telltale sign that 25 it contacted the orbital rim, it could be

1 Scher 129 2 contact in another location too. 3 Ο. What is your basis for saying that? 4 Α. For example, if the ball were to 5 contact the eye and the eyelid, you could create 6 bruising that spread to the area over the 7 orbital rim but there may have been no orbital 8 rim contact. 9 Q. How do you know that that would occur? 10 It's based on my experience. Α. Well, you're not an eye doctor, right? 11 Ο. 12 Α. No, but I have seen many cases where 13 people get contacted or went into things and the 14 bruise is not just or the ecchymosis even is not 15 just in the location of contact, it spread from 16 the exact location. 17 Can you tell me what your basis would Q. be for saying that something could contact only 18 19 the eyeball and that there would be evidence of 20 injury in the tissue surrounding the areas of 21 the eye? 22 MR. UGHETTA: Objection to form. 2.3 Α. If you're asking me for a medical 24 opinion of it, I don't have an opinion but based 25 on my experience seeing other injuries, sure, I

1 Scher 130 2 think that the whole eye can swell if it's 3 contacted even if the orbital rim is not 4 contacted, the swelling could go into that area. 5 Ο. Could the orbital rim be contacted and 6 there not be a fracture? 7 Α. Sure. Could Ms. Nicolosi have been struck in 8 Ο. 9 the eye with the anchor ball and not have 10 sustained a fracture to her orbital rim? I am sorry, one more time? 11 Α. 12 Could Ms. Nicolosi have been struck in Ο. 13 her eye with the anchor ball and not sustain a fracture of her orbital rim? 14 15 Α. When you say eye, I assume you mean 16 the eyeball itself, not the eye including the surrounding structures; is that what you mean? 17 If she was using the resistance 18 Ο. No. 19 band and the anchor ball hit her in the right eye, if that happened, could she have sustained 20 21 an injury to her eyeball without having suffered a fracture of the orbital rim? 22 2.3 Α. Yes. 24 Ο. So, the fact that there was no 25 evidence of fracture of the orbital rim in her

1 Scher 131 2 medical records does not mean she wasn't struck 3 in the eye with the door anchor ball, correct? 4 Α. The door anchor ball is a possibility 5 to contact Ms. Nicolosi, yes. 6 You're not testifying that it's your Ο. 7 opinion that the ball did not hit her in the 8 eye, are you? 9 Α. So, I should be clear, I think we 10 don't know if it's the band or the ball that contacted her in the eye, that it could be 11 12 either. We don't have enough information to 13 discriminate between the two nor does Dr. Tipton 14 for that matter. At the end of the day either 15 of those are possibilities. One of the two did, 16 I just don't know which one. 17 Q. So, you're not saying one way or the other you think it was either the band or you 18 think it was the ball, correct? 19 20 That is correct, it could be either Α. 21 the band or the ball, one of those two in this 22 case. 2.3 Q . You're not saying that it wasn't the 24 ball and you're not saying that it wasn't the 25 band, correct?

1 Scher 132 2 That is correct. Α. 3 Did you see any photos of Ms. Nicolosi Ο. 4 immediately following the trauma to her eye? 5 Α. I saw photos of Ms. Nicolosi. I don't 6 know if they are immediately following. 7 Did you see any photos of her showing Ο. any injury to her eyeball or the surrounding 8 9 areas? 10 Α. I can't see an injury in any of No. the pictures I have of Ms. Nicolosi. 11 12 Ο. Did you ask to see if there were any 13 photographs depicting any injuries to her eye? I don't think I asked specifically. 14 Α. Ι 15 would assume --16 Sorry, go ahead. Ο. 17 Α. I would assume I would be provided 18 with them if they existed but I am not sure. 19 Ο. Would that have made a difference in 20 your analysis whether or not you saw photographs 21 depicting any injury to her eye? 22 Α. I can't imagine it would but I always like more information than less. 2.3 24 Is it possible that the door anchor Ο. 25 could contact the orbital rim and then deflect

1 Scher 133 2 into the eyeball? 3 Α. Sure. 4 Ο. Since the door anchor is round, as 5 long as the center of the door anchor is inside 6 the rim of the orbit, it would deflect toward 7 the eyeball, right? 8 Α. Not necessarily, no. 9 Ο. Do you know if it's possible for a 10 larger diameter object to injure the eyeball something larger than the door anchor ball? 11 12 Α. Sure, it can. You're aware that in the references 13 Ο. 14 you cite that they discuss severe eye injuries 15 occurring from baseballs impacting the eye, 16 right? 17 Α. That's right, although they also have 18 baseballs contacting the eye and it doesn't 19 create an injury. 20 Now, in your report you indicated I Ο. 21 believe that it was your opinion that the eye 22 injury sustained by Ms. Nicolosi could have been 2.3 caused by contact with the tubing of the band 24 alone; is that correct? 25 Α. I believe so, yes.

1	Scher 134
2	Q. Is it your opinion that it's more
3	likely for the injuries of the type that Ms.
4	Nicolosi suffered would occur from contact from
5	the tubing alone than from contact with the door
6	anchor?
7	A. I think in general they are equally
8	likely.
9	Q. Is that based on the testing you did
10	that you're coming to that opinion that the
11	injuries would be equally likely whether it was
12	the tubing or the anchor ball?
13	A. The testing is part of it, the rest of
14	the analysis is part of it as well.
15	Q. What is the rest of the analysis that
16	you're referring to other than your equipment
17	testing?
18	A. Well, the physical testing only gives
19	me mechanical parameters for the actual
20	resistance band and/or resistance band and door
21	anchor. I then take that information and use it
22	with the literature to determine likelihood of
23	injury, so, again, it's not just the testing,
24	it's also the continuation from there.
25	Q. It appears that you found that the

1 Scher 135 2 impact from the tubing alone can produce higher 3 normalized kinetic energy than impact from the 4 door anchor; is that correct? 5 Α. That's correct. 6 Ο. Is it your opinion that the best 7 predictor for eye injuries that you considered is normalized kinetic energy? 8 9 Α. I do believe that is the best 10 predictor of significant eye injury. What is your basis for that opinion? 11 Ο. 12 Α. The biomechanical engineering 13 literature. By that you're referring to the 14 Ο. 15 references you attach to your report? 16 Α. That's correct. 17 Any other literature other than the Ο. references attached to your report that form the 18 19 basis for your opinion that normalized kinetic energy is the best predictor for eye injuries? 20 21 Α. This is the main ones. I certainly 22 read other articles, certainly Stitzel articles 2.3 and others but I think the Tenion and Dumars 24 articles are the main ones. 25 Q. Based on your testing results could

1 Scher 136 the door anchor have sufficient normalized 2 3 kinetic injuries to cause the injuries Ms. 4 Nicolosi sustained? 5 Α. I think it could. 6 Ο. So, is it fair to say your results 7 indicate that the door anchor could have caused her injuries, right? 8 9 Α. Again, I think we talked about this a 10 few minutes ago, I tried to make it clear, I 11 think it's possible it's the band or the ball 12 that created her injuries, we don't know which 13 one but one of those two. 14 Ο. Did you consider any other injury 15 criteria in your analysis other than what you 16 have already spoken of? 17 Α. Maybe you can be more clear. 18 The injury criteria using normalized Ο. 19 kinetic energy? 20 So, I have used normalized kinetic Α. 21 injury for the likelihood of injury but internal 22 to that is velocity and mass and you bring those 2.3 together to an area. 24 Ο. Other than using the normalized 25 kinetic energy criteria did you consider other

1 Scher 137 2 injury criteria? 3 Α. I am sure, yes. 4 Ο. Which ones? 5 Α. For example, kinetic energy. 6 Why do you use normalized kinetic Ο. 7 energy over kinetic energy? Because it's been found to be a better 8 Α. 9 predictor of significant eye injury. 10 Are there any limitations to using Ο. that as injury criteria that you're aware of? 11 12 Α. Sure. 13 Q. What are you aware of are limitations 14 to using that criteria? 15 Α. Well, for example, if you use an area 16 that is bigger than the eye so that -- the 17 baseball is a good example, the baseball can't 18 fit into the orbit, so that may provide you an 19 unreasonably low calculation for normalized 20 kinetic energy, it would be a limitation. 21 Q . Is the injury criteria appropriate to use for a ball of a door anchor's diameter? 22 23 Α. I believe so. 24 What is your basis for saying that? Ο. 25 Α. It can fit within the orbit and

1 Scher 138 2 transfer its energy to the eyeball. 3 I notice in your latest disclosure Ο. 4 that you did two calculations for the projected 5 area, one was ball diameter and the other is eye 6 diameter; is that right? 7 Α. That is true. 8 Which one did you use for the Ο. 9 normalized energy calculations? 10 Α. I used both. Which ones did you include in your 11 Ο. 12 report? 13 Α. I think I used the ball diameter in my 14 report but I considered both and I actually 15 talked about the smaller projected area in my 16 report as well. 17 Q. Why did you use the ball diameter in 18 your report and not the eye diameter in your 19 report? Because the ball can fit within the 20 Α. 21 orbit at least for an average person and 22 transfer its energy to the eye. It seemed like 2.3 the appropriate measure but I also considered if 24 it were only the cross-sectional area of the eye 25 and both cases I came up with the same results,

1 Scher 139 2 not the exact numbers mind you, but certainly 3 the conclusions were the same. 4 Ο. Did one show higher energy levels than 5 the other whether you used the eyeball diameter or the anchor ball diameter? 6 7 Α. The energy is the same. The normalized kinetic energy is different. 8 9 Ο. Which showed greater normalized 10 kinetic energy? 11 When you use the smaller area, the Α. 12 normalized kinetic energy was larger. 13 Q. Which one was that, the eye or the ball? 14 15 Α. The ball has a larger area than the 16 eye, so the eye is the smaller area. 17 Q. So, the eye diameter would have a higher normalized kinetic energy, correct? 18 19 Α. In my calculations, yes. 20 But you chose to use the ball diameter Ο. 21 in the report and used those numbers instead, 22 correct? 2.3 Α. I reported those numbers. I 24 considered both and I talked about both in my 25 report.

1 Scher 140 2 Is the door anchor ball larger than Ο. 3 the eye itself? 4 Α. For the average person, yes. 5 Drawing your attention to the Kennedy Q. 6 2011 report if you can pull that up for me? 7 Α. Okay, I am there. 8 If you can go to page 11 of the report Ο. 9 which I think is the twelfth page of the PDF, 10 the last paragraph. 11 Okay, I am there. Α. 12 Do you see the last sentence where it Ο. 13 says, quote, these data points were excluded 14 because they were larger than the eye itself and 15 would lead to unrealistically low estimates of 16 normalized energy because the contact area 17 between the projectile and eye would be less 18 than the overall cross-sectional area of the 19 projectile. Do you see that? 20 Α. I do. 21 Q. Do you agree with that statement? 22 I mean, that is their statement I Α. 23 mean. 24 Ο. Do you agree with it? 25 Α. There is nothing to agree or disagree

1 Scher 141 2 with it, that is what they did in their study. 3 Do you have any reason to dispute the Ο. 4 finding in their study that the data points for 5 an object larger than the eye itself would lead 6 to unrealistically low estimates of normalized 7 energy? 8 Α. That is not a finding in their report, 9 that is what they are saying as a basis for 10 excluding certain tests. Do you have any problem with their 11 Ο. statement in that record? 12 13 Α. No, and that is partly why I looked at 14 a different normalized kinetic energy with just 15 the eye diameter and, again, that does not 16 change the results in a significant way and 17 certainly not my conclusions but it was all part 18 of my analysis during the report and it's 19 mentioned in the report. 20 Would you agree that the calculations Ο. 21 in your report using the project area of the 22 door anchor could result in unrealistically low 2.3 estimates of normalized energy? 24 I don't think it would because I think Α. 25 that energy can be transmitted to the eye unlike

1 Scher 142 2 a baseball that would be too large a fit into 3 the orbit, the door anchor ball can. 4 Ο. Now, my understanding is that you 5 recorded high speed video of each of your tests, correct? 6 7 Α. I did. 8 Your report says that the frame rate Ο. 9 was 3600 frames per second; is that also 10 correct? That is correct. 11 Α. 12 Ο. You have a load cell recording that 13 data? No. The load cell doesn't record the 14 Α. 15 video data. 16 Ο. Was the load cell connected with the 17 video data in any way? 18 Α. They were synchronized. 19 Q. Now, your report says that there was a sampling rate of 6,000 hertz. Is that something 20 21 that you changed yesterday; is that correct? 22 That is the other test, so the other Α. 2.3 test I did in your office on the subject band, I 24 think, actually, in the conference table you're 25 at now is the same room, so those tests were

1 Scher 143 conducted not at 6,000 hertz but 5,000, so I had 2 3 a typo in my report that, yes, it was corrected 4 yesterday. Similarly, my testing of the 5 exemplar bands that I showed you a few minutes 6 ago with the same equipment was tested at 5,000 7 hertz, not 6,000, again the same typo. 8 Again, that was the stiffness testing, Ο. 9 that wasn't the load testing, correct? 10 Α. Yes. Now, there is something in the report 11 Ο. that indicates a 1,200 hertz filter? 12 13 Α. Yes. 14 Ο. What is that referring to? 15 Α. That is the anti-aliasing filter for 16 the load cell. 17 Q. Do I recall you made a correction of that number from 1,200 to 1,000?18 For the stiffness testing test, that 19 Α. 20 is correct. 21 Q . So, there is a 1,200 hertz filter for 22 the load cell but a 1,000 hertz filter for the 2.3 stiffness testing? 24 Α. No. There is a -- so, the 25 anti-aliasing filter is one fifth of your

1 Scher 144 2 sampling frequency in the data acquisition 3 system that I use, so for the stiffness tests 4 the acquisition frequency was 5,000 hertz, the 5 anti-aliasing frequency was 1,000 hertz. For 6 the test where I used the high speed camera, I 7 am looking into the mechanical properties of the 8 exemplar band as it went up, that had a sampling 9 frequency of 6,000 hertz and the anti-aliasing 10 frequency of 1,200 hertz. What is that anti-aliasing frequency 11 Ο. 12 filter do? What is the purpose of that? 13 Α. The short version is it makes sure 14 that you don't have any frequency filter in your 15 data that makes your data erroneous. 16 Ο. Does it filter out some small 17 erroneous data? 18 It filters out frequencies above the Α. 19 cut-off frequency, so if there is a frequency that's 2,400 hertz, that would not be acquired. 20 21 Q . Then there is a 300 hertz digital 22 filter that I see referenced. Can you tell me 2.3 what that was? 24 Α. Right. Once you collect the data, 25 then in processing I took that information and

Page 145 December 7, 2017

1 Scher 145 2 filtered with a zero phase filter that then took 3 out noise spikes. The 300 hertz filter was 4 determined based on what is called a residuals 5 analysis, so you look at the data, you apply 6 various filter frequencies and you figure out 7 what the noise versus the signal is and you figure above that and that's what was done here. 8 9 Ο. So, the 300 hertz filter was done 10 after the loads are acquired; is that correct? It's part of the acquisition process 11 Α. 12 and processing of the data, so it gets acquired 13 and then in the transition it becomes filtered. 14 Ο. I see that you did an analysis of 15 residuals that you just referred to. Did you 16 record that analysis? 17 Α. No, I did not. 18 Q. Why not? 19 Α. It's not our practice to. We look for 20 the appropriate filter frequency, we filter with 21 that and then we have a clean signal where we have taken out the noise, so the appropriate 22 2.3 signal noise. 24 Ο. Do you have the data saved before it 25 went through the 300 hertz filter?

1 Scher 146 2 I do not. Α. 3 So, the raw data that was measured by Ο. 4 the load cell was modified by the 300 hertz 5 filter; is that fair to say? 6 It gets filtered by the filter. Α. 7 Ο. So, the numbers change is what 8 happens, right? 9 Α. Maybe slightly but the process removes 10 the noise from the signal. Would the peak force in the raw data 11 Ο. 12 be lower after the 300 hertz filter is applied? 13 Α. It could be. 14 Ο. Did you save any of the raw data? 15 Α. No. I just saved the data that has 16 the clean signal. 17 Going back to your last question if 18 you're looking at peak force, what I am really 19 interested in is impulse, so even if the peak was lowered slightly, the impulse time would 20 21 increase your actual effected impulse is not 22 going to change, certainly not significantly 2.3 even if it does change. 24 Ο. Is the data that you provided in the 25 CSV files that is the data after the 300 hertz

1 Scher 147 2 filter was applied, correct? 3 Α. That is correct. 4 Ο. Was anything else done to that data? 5 Α. Not that I can think of. 6 What units of force was it measured Ο. 7 in? 8 Α. I believe it's in pounds. 9 Q. So, in the CSV file those numbers are pounds? 10 11 Α. I believe so. 12 So, nothing else went into the CSV Ο. 13 files that we have other than the data that was 14 filtered as you have just described? 15 Α. I am not sure what you mean. 16 Any other changes to the data? Ο. Was it modified in any way? 17 18 There were no changes. Α. The noise was 19 removed from the data. There is multiple 20 columns of data, so there is not just force 21 data, so I am not sure I fully understand your 22 question. Maybe you can ask it again. 2.3 Q. Other than the filters we have 24 described that would modify the raw data to the 25 data that shows up in the CSV file, was there

1 Scher 148 2 any other type of filter, any other type of work 3 done with that data to get from --4 Α. Not that I can think of. 5 In your report you determine that the Q. 6 average speed of the band was within the last 7 one to two inches before impact; is that 8 correct? 9 Α. The speed that I determined was within 10 the last two inches. How did you calculate the speed? 11 Ο. 12 Α. Looking at the number of frames that 13 the band moves within those last two inches. 14 Ο. So, is the distance that the band 15 moved divided by the time elapsed in the video 16 frames? 17 Α. That's right. 18 Q. Would that be at 3,600 frames per 19 second? 20 Α. That's correct. 21 Can we go to the document in your Q. 22 file? You can find it under your analysis 2.3 section, testing analysis. 2.4 MR. UGHETTA: Mr. Smiley, when you 25 get a chance, are you ready for another

Page 149 December 7, 2017

1 Scher 149 2 five minutes? 3 MR. SMILEY: Yes, I think this is a 4 perfect time. Why don't we do it now. 5 (Whereupon, a recess was taken.) 6 Dr. Scher, if you can find the part of Ο. 7 your file under testing analysis all impacts 8 data log speed all PDF? 9 Α. I am sorry, all impacts, what was the 10 next one? Data log speed all. 11 Ο. 12 Α. Got it. 13 Ο. I see a column there that has scale with numbers below it? 14 15 Α. Yes. 16 Could you explain to me, please, what Ο. 17 the scaling is, what that column represents? 18 The plate that was contacted by Α. Sure. 19 the band and/or ball, door anchor ball, was not at the back where we have the inch scale showing 20 21 eye height at 5-6, so because it's not in the 22 same plane, the pixels per inch are going to be 2.3 different, so this scale adjusts for that 24 difference in length in pixels per inch. Between the level of the aluminum 25 Ο.

1 Scher 150 2 plate and the inches on the wall behind it? 3 The vertical distance how many pixels Α. 4 represent an inch. 5 Do you determine the value of the Ο. 6 scale for each test because I see that the 7 number changes? 8 Α. Yeah. The camera moves slightly 9 between tests even though it was on a tripod, so 10 that is, basically, looking at the -- there is a 11 scale on the load cell and looking at that 12 compared to the scale on the backdrop. 13 Q . That was measured for each test? 14 Α. That is right. 15 Q. Why is the scale lower on the test 16 where you use the door anchor? 17 Α. It changes all over the place. If it is, it just happens to be a slightly different 18 19 position of the camera. 20 Did the camera change its position for Ο. 21 all of the door anchor contacts? 22 It changed position slightly across Α. 23 all of the testing. 24 What would the effect on the data be, Ο. 25 if any, as the scale number gets lower?

1 Scher 151 2 I think the -- well, I don't remember. Α. 3 I would have to look at it. 4 Ο. Did you just calculate the impact 5 velocity or did you also look at rebound 6 velocity? 7 Α. Just the impact velocity. 8 Ο. Was there any rebound in any of these 9 tests? 10 Α. There was. Is there a reason why you did not 11 Ο. 12 measure that? 13 Α. To be more conservative, and I say 14 that because, really, the rebound was limited to 15 the ball contacts and when you calculate the 16 effective mass and you divide by change in 17 velocity, there is a larger change in velocity 18 that creates a smaller effective mass which 19 would be less conservative, so in a sense I am 20 giving the ball more benefit of the doubt in 21 injury likelihood. 22 Can you next go to the data log, the Ο. 2.3 energy all PDF, please. 24 Α. I am there. 25 Q. Can you show me what equations you

1 Scher 152 2 used to obtain the impulse numbers that you have 3 listed here? 4 Α. The impulse is the integral of the 5 force over time, so it's the -- if you look at 6 time history, you sum up the force as you go 7 along using the cumulative trapezoid method. 8 Can you tell me what data that you Ο. 9 have here that you used to calculate the impulse 10 time in the equation? So, that is just based on the impulse 11 Α. 12 itself, so you have all of that data. It's in 13 the files. Where in the CSV files does it show 14 Ο. 15 the impulse number? 16 Α. You have the whole force versus time 17 history, so you can actually look at and observe 18 the impulse. 19 Q. My question is, is there a formula 20 that you use to calculate that impulse, a mathematical formula? 21 22 The impulse is what the impulse is. Α. 2.3 The force goes up and the force comes down and 24 you can look at it and see it. 25 So, those numbers, for example, test Q.

DEITZ Court Reporting - A Lexitas Company 800-678-0166

1 Scher 153 2 number one where the impulse time is .004, can 3 you direct me to something in your CSV files 4 that shows .004? 5 The data -- if you plot the data, you Α. 6 can look at it, you can put it in Excel if you 7 want and look at the data and you can measure the impulse time. I don't know how else to 8 9 explain it to you. 10 Ο. How do you measure it? From when it goes up to when it comes 11 Α. 12 down. 13 Ο. So, which data do you use, you use 14 specifically that you plot? 15 Α. You plot the force versus time, those 16 are the two columns of data that you have in the 17 testing data for this or for these tests. 18 When you plot force versus time in Ο. 19 Excel and create a graph, one of the options 20 will show you what the impulse time is? 21 Α. You can look at it and get impulse 22 time. 2.3 Q. Did you record the impulse times 24 anywhere other than on this page we're looking 25 at?

1 Scher 154 2 This is it. Α. 3 Was anything done with the force or Ο. 4 speed data before using it in the impulse 5 momentum calculations? 6 I think we talked about the filtering. Α. 7 Ο. So, I see the impulse times, next to 8 the impulse time there is a column that says 9 impulse and then there is an N-DS, is that 10 Newton per second? Not per, just Newton seconds. 11 Α. 12 How do you get to that number, so in Ο. 13 test one where it says .201, is there a formula 14 to get to that? 15 Α. You integrate the area under the force 16 curve where you have a force time history. 17 Ο. So, which numbers do you use, the 18 force calculation? Not calculation, the force data, the 19 Α. 20 time history and then you integrate, you get the 21 area under the curve. 22 So, the same data that you use to get Ο. 2.3 the impulse time you look at that data and you 24 look at the area under the curve and that is how 25 you get the calculation for the Newton seconds?

1 Scher 155 2 That is how you get impulse, that's Α. 3 correct. 4 Ο. How about the LBF-S, is that pounds of 5 force seconds? 6 Sorry, you're breaking up there. Α. 7 Ο. The column to the right of that that says LBF-S, what is that? 8 9 Α. Pounds force second. 10 How do you calculate that? Ο. That is exactly the same thing, it's 11 Α. 12 the impulse, it's the area under the curve. 13 Q. How do you convert Newtons to pounds? 14 Α. It's 4.448 Newtons per pounds and the 15 analysis -- the force history was in pounds I 16 believe and then I converted to Newtons. 17 Ο. How do you calculate effective mass? Using the impulse momentum equation 18 Α. 19 which is, essentially, a restatement of Newtons 20 second law. 21 Q. What equation is that? 22 Force equal mass times acceleration is Α. 2.3 Newton's second law. When you take a discreet 24 time interval, you can break it up into mass 25 equals change in velocity over change in time.

DEITZ Court Reporting - A Lexitas Company 800-678-0166

1 Scher 156 2 When you saw off mass, you get force times 3 change in time divided by change in velocity 4 gives you your effective mass. 5 Ο. Are those numbers that you use in this 6 document that we're looking at, in other words, 7 are you using specific numbers in this chart to get to the effective mass? 8 9 Α. I have no idea what you mean. I mean, 10 if you can ask again. So, for example, look at test number 11 Ο. 12 one, the top row, under effective mass you have 13 .016 kilograms, right? 14 Α. Correct. 15 Q. Can you tell me how you got to .016 in 16 simplest terms possible? What figures or 17 calculations did you use to get to that? 18 You take the impulse and you divided Α. 19 it by the velocity. 20 So, impulse divided by velocity gets Ο. 21 your effective mass? 22 Here, yes. Α. 2.3 Q. So, in test number one would it be the 24 Newton's seconds divided by the M-/S gets you 25 the kilograms?

1 Scher 157 2 That's correct. Α. 3 Is M/S milliseconds? Ο. No, that is meters per second. 4 Α. 5 Meters per second? Ο. 6 That's correct. Α. 7 Ο. Then that velocity is based on the 8 video analysis that we just spoke of before, 9 correct? 10 Α. That's correct. Next to the effective mass column on 11 Ο. 12 this document is kinetic energy, is that in 13 joules? 14 Α. That's correct. 15 Q. Could you be kind enough to tell me 16 what numbers you use and what calculations of 17 those numbers result in the kinetic energy in the first row we have here of test one? 18 19 Α. It's just one half effective mass 20 times velocity squared. 21 Q. So, the kinetic energy where it says 22 1.3 would be one half of the .016 kilograms 2.3 multiplied by the square of 12.7? 24 Α. That's right. 25 Q. Could you explain to me what effective

1	Scher 158
2	mass means, what the effective mass is?
3	A. Sure. So, it's the mass that relates
4	to the impulse. What you're looking at is an
5	average force being applied to something over
6	some time duration and it's going to equal some
7	effective mass. It might not be the actual mass
8	of the item, it might have some load sharing or
9	some mass from other components. To give an
10	example, if you have the band and you had one
11	inch of band contacting, there is a certain mass
12	of that one inch of band but the effective mass
13	as it contacts may actually be that mass that
14	is contacting as well as mass from items or
15	parts of the band behind it loading that one
16	inch of band, so now you look at the change in
17	velocity for that structure and here what I have
18	done is I have said okay, as it contacts, we're
19	going to bring it to zero as it hits the plate.
20	Q. Can the effective mass ever be more
21	than the total mass of an object?
22	A. Oh, yeah, absolutely and by that I am
23	assuming you mean the anchor ball, for example,
24	because the anchor ball is only 0.045 pounds but
25	the effective mass is higher and that is

1 Scher 159 2 probably -- well, there's two reasons for that, 3 one, I assume the velocity goes to zero instead 4 of having some rebound but, two, there's 5 probably some load sharing or some mass of the band helping that out. 6 7 Ο. Pushing behind it? 8 That's right, not in all tests but in Α. 9 some tests. 10 Ο. How would the rebound effect the effective mass? 11 12 Essentially, a larger change in Α. 13 velocity would then decrease the effective mass 14 that would decrease your kinetic energy in case 15 you're wondering and decrease the likelihood of 16 injury when I used it in the calculations, so to be conservative I just used it going to zero as 17 18 opposed to including that rebound. Turning back to your report if you can 19 Ο. 20 go please to page 17 of your report. 21 Α. I am there. 22 The last sentence of table one at the Ο. 2.3 top there do you see where it says, quote, note 24 the effective tubing length for eye contact was 25 half inch for this table; do you see that?

1 Scher 160 2 Yes, I do. Α. 3 Why did you choose half inch as the Ο. 4 length? 5 Α. So, the range for the contact length 6 would be I think on the low end maybe a quarter 7 of an inch and the high end the length of the eye about an inch, so I believe that the 8 9 effective contact area is going to be in the 10 ballpark of say half an inch to three-quarters 11 of an inch, so for this table I chose half an 12 inch to show. 13 Ο. How would the normalized energy change if you used an inch as opposed to half an inch? 14 15 Α. An inch, again, on the unrealistic full length of the eye contact it would be 16 17 lower. 18 Is it fair to say the longer the Ο. 19 effective length, the lower the normalized 20 energy? 21 Α. That is correct. 22 The shorter the effective length, the Ο. 23 greater the normalized energy? 24 That's correct. Α. 25 Q. Now, I think you indicate somewhere in

1	Scher 161
2	the report that the exact length of the elastic
3	resistance band that could contact the eye of a
4	user was not known. Did you say that?
5	A. I don't know if I did but I believe
6	that is true. The exact length would not be
7	known, that is why I used a range.
8	Q. How could only a quarter inch length
9	of tubing impact the eye?
10	A. If, for example, in Ms. Nicolosi's
11	case the ball misses the face and the band wraps
12	around the corner of the eye toward the outside,
13	I believe you can get a quarter of an inch
14	contacting the eye and as the ball moves past,
15	you wind up loading the eye with the band.
16	Q. Have you seen any studies that would
17	talk about what the resulting injuries to the
18	eye would be in that type of scenario?
19	A. In that exact scenario?
20	Q. Yes.
21	A. No, but in general a lot of these
22	articles that are referenced in my references,
23	as well as others that I have read talk about
24	small of area contacts to the eye.
25	Q. But specifically where you're talking

1 Scher 162 2 about how a quarter inch of tubing could have 3 hit Ms. Nicolosi's eye, are you talking about 4 the ball going by and striking along the side of 5 the eyeball, right? 6 The ball -- no, no, maybe I didn't Α. 7 make sense. If the ball misses the face and the band which is trailing behind it cuts across the 8 9 corner of the eye, I am demonstrating here, 10 obviously, it won't come up in the transcript, 11 the band cuts across the eye like this 12 (Indicating). Can you see that? 13 Q. Yes. 14 Α. In that case as the ball moves up and 15 the band stretches the eye, I think you can have 16 a quarter of an inch contacting the eye. Would there be a scenario where you 17 Ο. 18 can have a quarter of an inch contacting 19 directly a direct impact to the center of the 20 eveball? 21 Α. A quarter of an inch might be on the 22 small end. I think a half of an inch, sure, but 2.3 I don't think necessarily a quarter of an inch 24 center of the eyeball. It's possible but less 25 likely.

1	Scher 163						
2	Q. Are you aware of any of the testing						
3	that you did where the tubing piled up in a						
4	small area such as a quarter of an inch?						
5	A. I don't think it was as small as a						
6	quarter of an inch but it did contact a small						
7	area.						
8	Q. How small an area?						
9	A. I don't recall.						
10	Q. In the video did you see where several						
11	inches of tubing hit the plate?						
12	A. There were instances of that.						
13	Q. Would you expect that the loads						
14	reported when several inches of tubing hits a						
15	plate would be different than the loads you						
16	would anticipate with a less than a half inch of						
17	tubing striking an eyeball?						
18	A. I think the condition would be						
19	different contacting an eyeball but that						
20	wouldn't be the point of the test. The point of						
21	the test was to examine mechanical properties						
22	and what was happening with the resistance band						
23	system. I think in terms of contacting the						
24	effective mass for my analysis, what I have is						
25	appropriate.						
1	Scher 164						
----	--	--	--	--	--	--	--
2	Q. So, if I have been understanding your						
3	testimony right, you did not set this up to						
4	demonstrate what type of injuries would result						
5	from an anchor ball or a band hitting an eye,						
6	you just set it up to see what kind of loads you						
7	could record from an anchor ball or a tubing						
8	hitting; is that fair to say?						
9	A. I would say looking at the mechanical						
10	properties of the tubing system so I could						
11	calculate kinetic energy and normalized kinetic						
12	energy.						
13	Q. Don't you think the testing if you						
14	were to set it up as a custom design for this						
15	case would have been more appropriate if you set						
16	it up in a manner where the likely size of						
17	tubing and/or door anchor hit something the						
18	approximate size of an eyeball?						
19	A. No.						
20	Q. How much area did that metal plate						
21	have?						
22	A. I am not sure off the top of my head.						
23	Q. How much area does an eye have?						
24	A. Approximately three-quarters of a						
25	square inch.						

1	Scher 165
2	Q. Now, how can you use a quarter inch to
3	an inch length with an effective mass based on
4	several inches of tubing by hitting the plate in
5	your testing?
6	A. I am sorry, one more time.
7	Q. How can you use a quarter inch to an
8	inch length with an effective mass based on
9	having several inches of tubing hitting the
10	plate in your testing?
11	A. I don't understand your question,
12	maybe you can ask it a different way.
13	Q. So, in your testing what I saw on the
14	video was often several inches of tubing hitting
15	the plate; is that fair to say that, that is
16	what occurred?
17	A. In some instances, sure.
18	Q. So, how do you take that an analyze
19	database on a quarter of an inch or an inch of
20	tubing?
21	A. So, what I am looking at is the
22	effective mass of those contacts and where it
23	contacts the plate is not necessarily what is
24	loading the plate. The same thing with the eye,
25	where it's contacting the eye, an actual eye

1	Scher 166
2	impact may not represent the mass, the effective
3	mass, of the item contacting it, so I think that
4	the two are not independent but separate.
5	Q. But wouldn't the effective mass of two
6	to three inches of the band hitting the aluminum
7	plate be different than the effective mass of a
8	one inch of tubing hitting an eyeball?
9	A. Not necessarily, no.
10	Q. Didn't you in your testing though
11	calculate the effective mass of tubing as it
12	piled up against the plate over a large area
13	when in reality the tubing can only act on a
14	small area of the eyeball?
15	A. So, the tubing could hit a small area
16	of the eyeball and, for example, tubing could go
17	by the eyeball instead of hitting a plate and
18	still load the plate and we see that in the door
19	anchor no, what do they call it, door anchor
20	tubing only contact where you have a small
21	section of tubing contacting a plate, yet the
22	effective mass is quite high, so I think it's
23	quite reasonable to do it this way.
24	Q. Is it fair to say that the effective
25	mass of the tubing that you calculated in your

1 Scher 167 2 testing was somewhat based on two to four inches 3 of tubing hitting the plate? 4 Α. No. I would disagree with that. 5 What was it based on, how many inches Ο. of tubing? 6 7 Well, the effective mass if you look Α. 8 at the numbers could represent six to nine 9 inches of tubing, not necessarily hitting the 10 plate but causing the force on the plate. Again, the area that contacts the plate is not 11 12 necessarily what the effective mass is going to 13 be. 14 Ο. Now, looking at your videos it appears 15 that when the ball anchor was used, the ball 16 anchor was always the first thing to reach the level of the plate; is that correct? 17 18 I would agree with that. Α. 19 Q. It would get there by a faster amount 20 of time than the resistance band would get 21 there, correct? 22 It would reach the eye level first but Α. 2.3 we're talking about small fractions of a second, 24 we're talking, you know, a few frames, so 25 thousands of a second difference.

1 Scher 168 2 But the ball gets there before the Ο. band when the ball is attached, right? 3 4 Α. When the ball is attached, it reaches 5 Ms. Nicolosi's eye height first, that's correct. 6 When the ball is going up, the length Ο. 7 of the strap is separating the ball from where it's attached to the resistance band, correct? 8 9 Α. To the way you have just held your 10 hands up, you had it vertical? Ο. 11 Yes. 12 Α. It's not always the case, sometimes 13 the band is at the same level or sometimes maybe 14 not exactly the same level, just below it, 15 sometimes it is as you had your hands but it 16 varies. 17 Ο. The distance between the ball and the band is about six inches; is that fair to say? 18 19 That is the length of the strap that connects the ball to the band? 20 21 Α. It can be six inches or it could be 22 virtually nothing. 2.3 Q. Did you measure that in any of your 24 testing, the distance with which the ball would 25 reach the eye level prior to the band when it

1 Scher 169 2 was attached? 3 I am sorry, I don't understand what Α. 4 measurement you want. 5 The distance between the ball and the Ο. 6 band when the ball reaches eye level? 7 Α. I did not measure that. Did you consider that measurement? 8 Ο. 9 Α. I don't think I considered that 10 measurement, no. Did you measure the distance of the 11 Ο. 12 speed between which the ball would reach eye 13 level and the band would reach eye level? 14 Α. That doesn't make any sense. I am 15 sorry, can you try it again? 16 Ο. When there is a ball attached and it 17 shoots up and the ball reaches the level of the eyes and the band is coming up behind it and the 18 19 band reaches the level of the eyes, there is a 20 distance in time between that, right? 21 Α. I don't know about the distance. 22 There is a time between that. 2.3 Q. I am sorry, I may have misspoke, there 24 is a time, a distinction in time, there is a 25 delay in time between when the ball gets there

1 Scher 170 2 and when the band gets there, right? 3 Right, because the ball gets there Α. 4 first, correct. 5 Did you measure the difference in that Q. 6 timing sequence? 7 Α. No. Is it fair to say that when the door 8 Ο. 9 anchor is attached to the resistance band in 10 use, that the ball of the door anchor is going to hit the target before the band is? 11 12 Α. No, and that is the whole point of the 13 testing that I did that was door anchor attached 14 but only tubing contact. 15 Q . That is because you moved something 16 off to the side of it, right? You moved the 17 plate to the side of the ball? 18 Α. That is right. 19 Ο. If you didn't move a plate and it 20 stayed where it was, isn't it fair to say that 21 every time that you did a test where the door 22 anchor was attached to the band, the ball of the 2.3 door anchor is going to hit that plate first? 24 Α. Yes, because I designed it that way. 25 Q. But in use isn't it fair to say that

1 Scher 171 2 when that accelerates upwards, that being the 3 band with the door attachment on it, the door 4 anchor, that door anchor is going to be the 5 first thing that goes up vertically; isn't that true? 6 7 Α. Right, we said this, I mean, this is 8 the fourth time now. The ball reaches eye 9 height first, it's not necessarily what contacts 10 a person though. But it leads, it leads everything, in 11 Ο. 12 other words, the band follows the ball and the 13 trajectory upwards in every situation, right? 14 Α. The ball reaches eye level first, it 15 doesn't necessarily pull the band up as your 16 hand motion is describing. The band could be 17 just slightly behind the ball but you're right, the ball reaches first but the ball may not 18 19 contact the person, it may be the band that 20 contacts the person. 21 Q . I understand that, depending on where 22 things are it may shift the point of contact; 2.3 however, all other things being equal, when that 24 band comes up out from under the foot, the ball 25 is going to be the first thing coming up, right?

1 Scher 172 2 The ball reaches eye level first. I Α. 3 think that may be the sixth time we talked about 4 that. 5 You're very good about keeping track Ο. 6 of how many times. I'm going to guiz you later. 7 I was only kidding. I learned from Α. 8 the last depo. 9 Ο. Are you aware of any studies that have 10 concluded that an exercise resistance band tubing can cause the same or greater injury to 11 12 an eye than a plastic ball? 13 MR. UGHETTA: Can I have that read 14 back, please? 15 (Whereupon, the question was read 16 back by the court reporter.) 17 MR. UGHETTA: Did you get that? 18 THE WITNESS: I think so. 19 Α. I am not aware of any study that 20 looked at that specific comparison. 21 Q . You're the first person as far as 22 you're aware of that concluded that the injuries 2.3 that a person can sustain using a resistance 24 band with a door anchor could be the same 25 injuries whether it's the anchor that hits the

1 Scher 173 2 eye or the band that hits the eye; is that 3 correct? 4 MR. UGHETTA: Objection to form. 5 Α. So, I am not the first person to look 6 at injury likelihood of eye injury but I may be 7 the first to look at Ms. Nicolosi's accident and the circumstances here using biomechanical 8 9 engineering technique. 10 Specifically as far as you're aware Ο. knowing that there are other resistance bands 11 12 that have been out on the market and other door 13 anchors, you're the first person to come to the 14 conclusion based on testing that the likelihood 15 of injury to an eye while using that product can 16 be the same whether it be the door anchor that 17 strikes the eye or just the tubing itself that 18 strikes the eye, correct? 19 MR. UGHETTA: Objection to form. 20 So, I think we're going through this Α. 21 It's -- this may be the first time that again. 22 anyone has looked at Ms. Nicolosi's type of 2.3 accident using biomechanical engineering 24 techniques but people looked at eye injury 25 likelihood. I am not familiar with any study

1 Scher 174 2 that looked specifically at resistance band 3 injury likelihood to the eye with or without a 4 door anchor. 5 Would you agree that as a result of Q. 6 your testing that there is no doubt that the 7 resistance band product that Ms. Nicolosi used 8 can result in serious injury to an eyeball? 9 Α. I think that if misused the product 10 can result in significant injury. If the product were used properly, I think the 11 12 likelihood of injury is very low if not 13 extremely low. 14 Ο. You used the term misuse and your 15 version of misuse is doing something different 16 than the pictures in the manual, correct? 17 Α. Yes, and it doesn't have to be exactly 18 as the picture there but generally like what is 19 described in the manual in the picture and in the text specifically the tubing is under the 20 21 arch of the foot securely on the ground and the 22 person is in a general body configuration where 2.3 they are upright doing the curl maneuver. 24 Would you agree that if a user of the 0. 25 resistance band that Ms. Nicolosi used put their

1 Scher 175 2 head over their foot so that they were looking down at the location of the band under the foot 3 4 and attempted to do a biceps curl, that that 5 could result in extremely serious injury to an 6 eve? 7 Again, only if not done properly. Α. Ιf the band is under the arch of the foot, this 8 9 doesn't happen, so, for example, if Ms. Nicolosi 10 even had the ball, the door anchor ball, under the ball of her foot and the band were under the 11 12 arch of her foot, this wouldn't have happened, 13 so I think as you stated it the answer is no. 14 Ο. So, if a user were to put a ball, an 15 anchor ball, under the ball of the foot and 16 tried to do a biceps curl with their head 17 looking over their foot looking down at it with their head position in line above their foot, 18 that could result in serious injury to a 19 20 person's eye? 21 MR. UGHETTA: Objection to form and 22 hypothetical. 2.3 Α. Not if the resistance band is securely 24 under the arch of the foot. 25 Ο. That wasn't my question.

1 Scher 176 2 The resistance band is -- well, you Α. 3 didn't include that in your hypothetical. 4 Ο. Yes, I said under the ball of the 5 foot, under the ball of the foot. 6 You said the ball is under the ball of Α. 7 the foot. 8 MR. UGHETTA: Objection to form. 9 Objection to form. That is not what you 10 said but okay. If a user of this product were to 11 Ο. 12 attempt to do a biceps curl by putting the 13 anchor ball under the foot and had the head looking down in line with that front foot, could 14 15 that result in the resistance band causing a serious injury to that person's eye? 16 17 MR. UGHETTA: Objection to form. 18 So, again, if the resistance band is Α. 19 under the arch of the foot, I think it's very unlikely. If the resistance band is say forward 20 21 of the foot, then it's possible. 22 So, having the ball forward to the Ο. 2.3 arch of the foot is a distinguishing factor in 24 your opinion as to whether or not the resistance 25 band could cause serious injury to a user; is

1 Scher 177 2 that fair to say? 3 MR. UGHETTA: Objection to form. 4 Α. I think maybe you misheard. If that 5 is a follow-up from the last question, it's the 6 resistance band placement that I am talking 7 about. I don't think it's a good idea to put the door anchor under the ball of the foot. 8 I 9 don't think you can securely hold it down, it's 10 not secure, but if the arch -- I am sorry, if the band is under the arch, I don't think you're 11 12 likely to get that happening, slipping out. 13 My question is if a user were to do a Q. 14 biceps curl and putting the ball, the anchor 15 ball, under the foot and was leaning forward 16 such that their face was in line with that front 17 foot doing a biceps curl, would that person by at risk of sustaining a serious eye injury? 18 19 MR. UGHETTA: Objection to form, 20 asked and answered, go ahead. 21 Α. Depending on where they put the 22 resistance band they could be. If they put the 2.3 resistance band forward of their foot, sure. 24 Ο. So, under that scenario in your mind 25 there is a distinction as to whether the ball

1 Scher 178 2 under the foot is toward the forward part of the 3 foot as opposed to under the arch or back of the 4 foot; is that fair to say? 5 MR. UGHETTA: Objection but go 6 ahead and explain it go slow. 7 So, if the resistance band itself is Α. 8 under the arch of the foot, it's unlikely that 9 you're going to be able to get it to slip out, 10 certainly not forward. MR. UGHETTA: You used tubing, he 11 12 used the word tubing instead of the word 13 band, maybe he thinks the band is the ball and it's not, just use the word 14 15 tubing. 16 Α. It's the placement of the tubing. Ιf 17 that is under the arch of the foot, if the resistance band door anchor ball which I don't 18 19 think should be under the foot, if it were under the ball of the foot, then it's unlikely to come 20 21 out but if you move the resistance band tubing 22 forward, then I think you're at risk. 2.3 Q. What do you think happened in Ms. 24 Nicolosi's accident? How do you think she was 25 positioned such that she was hit in the eye?

1	Scher 179
2	A. I think she had the resistance band
3	door anchor ball under the ball of her foot as
4	she described in her deposition. I think the
5	tubing of the resistance band is forward of
6	that, probably in front of the sneaker itself,
7	and she is leaning over her foot looking down,
8	so she is more forward than the tip of her foot
9	as she is looking down and does the curl. I
10	believe that as she does the curl, the tubing
11	pulls the door anchor ball forward and out from
12	under her foot and it comes up to her face.
13	Q. How high off the ground do you think
14	her eyes were at that point of impact?
15	A. In the ballpark of four and a half
16	feet, somewhere in that range.
17	Q. How high was your aluminum plate in
18	your testing?
19	A. About four and a half feet.
20	Q. Do you consider yourself to be a
21	warnings expert regarding use of products?
22	MR. UGHETTA: Just for the record
23	he wasn't retained in this case to go
24	over human factors engineering or
25	warnings.

1 Scher 180 2 In general, no. Α. 3 You said on page 21 of your report Ο. 4 that it's not reasonably foreseeable that a 5 person would step on a door anchor; is that your 6 opinion? 7 Α. Let me go there. Yes, that is my 8 opinion. 9 Ο. What makes you an expert as to what is 10 reasonably foreseeable as to how a consumer is going to use a fitness product? 11 12 So, this is really a response to Dr. Α. 13 Tipton's opinions where he said it was 14 reasonably foreseeable that someone would do 15 this and so for me in looking at this it would 16 be examining the door anchor and the resistance 17 band both myself and watching other people in my 18 office look at it and seeing how unstable it 19 felt and feeling how uncomfortable it was to try to do curls with the door anchor ball under my 20 21 foot. 22 If you're aware that people prior to Ο. 2.3 Ms. Nicolosi had also attempted to do biceps 24 curls with the ball of the door anchor under 25 their foot, would that make a difference in your

1 Scher 181 2 mind as to whether or not it's foreseeable 3 somebody would do it that way? 4 MR. UGHETTA: Objection to form. 5 Α. I am not familiar with any cases where 6 that is the case. I would be surprised that 7 someone would be doing it that way. My question, Doctor, is if someone did 8 Ο. 9 do it that way, did do a biceps curl with the 10 ball of the door anchor under their foot prior to Ms. Nicolosi, would that change your opinion 11 as to whether or not it was foreseeable that 12 13 somebody would do a biceps curl with a resistance band with the ball of the door anchor 14 15 under their foot? 16 Objection, compound, MR. URHETTA: 17 objection to form. I am not familiar with any instance of 18 Α. 19 that happening before Ms. Nicolosi and it may or 20 may not, depending on the circumstances. 21 Q. But you're not an expert on 22 foreseeable use of fitness products, right? You 2.3 have no expertise or background in human 2.4 factors, do you? 25 Α. I am not a human factors expert.

1 Scher 182 2 You have no expertise in Ο. 3 foreseeability of use of fitness products, do 4 you? 5 I don't know if I agree with that. Α. Ι 6 certainly have a lot of experience with sports 7 and fitness products. I think I do have some ability to talk about what people typically do 8 or don't do. 9 10 In this case your opinion is based Ο. solely on the other people in your office using 11 12 the band and you using the band, that's what you 13 base your opinion on as to whether or not it's 14 foreseeable that somebody would do it that way? 15 Α. Well, and my experience and seeing how 16 unstable it was and how uncomfortable, yes, I 17 believe those are included in that. 18 Can you give me an idea of how much Ο. 19 time you spent on this case since your September 21st invoice? 20 21 Α. I don't know. I have no clue. 22 How much time have you spent on this Ο. case in the last week? 2.3 2.4 Probably three day's worth. Α. 25 Q. How many hours a day?

1 Scher 183 2 Maybe six and a half hours a day. Α. 3 MR. SMILEY: Why don't we take two 4 minutes if that is all right. I am going 5 to review my notes and then we'll be 6 finishing up, okay? 7 MR. UGHETTA: Sure, sounds good. 8 (Whereupon, a recess was taken.) 9 MR. SMILEY: I have no further 10 questions. Do you have questions? 11 12 MR. UGHETTA: I think I have two 13 real quick. MR. SMILEY: I have no further 14 15 questions subject to any follow-up from 16 Mr. Ughetta. 17 MR. UGHETTA: Understood. Just a 18 few questions here. 19 EXAMINATION BY MR. UGHETTA: 20 21 Q. What qualifies you to offer testimony 22 about the mechanisms of body injuries including 2.3 eye injuries? 24 Α. So, I would say my education and my 25 background and my experience. I have higher

1	Scher 184
2	degrees in mechanical engineering, specializing
3	in biomechanics and dynamic systems,
4	undergraduate degree from University of
5	Pennsylvania, I have a Ph.D. and a Master's from
6	UC Berkeley in those disciplines, I conducted
7	research on injury likelihood to the human body,
8	I have doing that for 22 years now, no, more
9	than that, somewhere in that ballpark, quite a
10	long time. As part of my training and my
11	experience I regularly read biomechanical
12	literature, I look at anatomy textbooks, some
13	medical literature as well, interact with
14	medical doctors to look at likelihood of
15	injuries, they diagnose the injuries and we talk
16	about what creates them from a biomechanical
17	standpoint, I work with them on that, my
18	experience in doing research at the University
19	of California, as well as the University of
20	Washington as part of the applied biomechanics
21	lab and all of that together gives me the
22	ability to assess injury likelihood of the body
23	and also the eye.
24	Q. Do you belong to any professional
25	organizations or do you participate in any

1 Scher 185 2 professional organizations that deal with eye 3 injuries? 4 Α. Yes. For example, AST International 5 as part of AST FMAO8 there is a group of 57 is 6 the subcommittee that looks at eye protection, 7 so there are specific eye protection standards that I have been part of, I've looked at and 8 9 analyzed. The one that comes to mind quickly I 10 believe is 659 on snow sports goggles, skiing 11 and snow sporting goggles. 12 Ms. Nicolosi's fiance testified, and I Ο. 13 know you read his testimony, he mentioned that the bruising around her eye and some of the 14 15 photographs might have some bruising around the 16 eye, if there is bruising around the lower lids 17 and upper lids of the eye, is that inconsistent 18 with any of the opinions or testimony you've 19 given here today? 20 No, that would be consistent. Α. 21 Q . One last question, you evaluated the 22 alternative designs recommended by Dr. Tipton. 2.3 Are there any adverse effects associated with 24 those alternatives of designs? 25 Α. Well, I think the short version here

1	Scher 186
2	is that those alternative designs also can
3	create eye injury. There's components of them
4	like the hard plastic portion or the cord that
5	could cause eye injury and then there is other
6	functional injuries that need to be examined
7	with his setup, such as the nerve material or
8	whatever that material he has, depending on the
9	foam, you could have issues with mold, fungus,
10	breakdown. There is not sufficient testing to
11	say that it would perform as required over what
12	you would expect for the life of the product and
13	the last part of that is, you know, it could
14	still create eye injury. I am not sure what the
15	advantage is of his alternate design.
16	MR. UGHETTA: That's all I have.
17	Thank you.
18	(Continued on the next page for the
19	jurat.)

1	CERTIFICATE
2	
3	
4	I, MARLEINE LAMEY, a Shorthand
5	Reporter and Notary Public of the State of
6	New York, do hereby certify:
7	
8	That, IRVING SCHER, the witness whose
9	examination is hereinbefore set forth, was
10	duly sworn, and that such examination is a
11	true record of the testimony given by such
12	witness.
13	I further certify that I am not
14	related to any of the parties to this
15	action by blood or by marriage; and that I
16	am in no way interested in the outcome of
17	this matter.

March 16, 2021

Johan A. Obregon, Esq. Kerley, Walsh, Matera & Cinquemani, P.C. 200 Sheffield Street, Suite 208 Mountainside, NJ 07092

Re: Philip Troy Christy Date of Birth: 10/01/1965 Date of Loss: 5/26/2017

Dear Mr. Obregon,

Today, I have seen and examined Philip Troy Christy for an expert spinal independent medical examination. He is seen here today in my Manhattan office, unaccompanied. His identity is confirmed by review of his active New York State driver's license. Please consider this note my detailed narrative report including today's interview and examination as well as review of sent records with opinion.

Mr. Christy reports involvement in a motor vehicle accident while driving for work on 5/26/17. He states that he was working in sales for HVAC equipment when his car was rear-ended by a truck going at high speed. His car was thrown to the left and then to the right, and he had neck, upper back, and lower back pain at the time. He was taken by ambulance to hospital where he was treated and released. He states that his neck and upper back pain have gone away, and his persistent problem only relates to the lower back. He has had two surgeries to the lower back since that date.

The first surgery to the low back was done on 5/31/18. Prior to surgery, he states he had treatment with medications for pain and pain management injections. He tried physical therapy, which was mainly modalities, but it did not help so he stopped going. He reports that symptoms prior to surgery included a central low back pain with radiation into both lower extremities including numbness and tingling, right greater than left. He also reports a severe "sciatica" pain in the right lower extremity, which was a new pain that began sometime shortly before the first surgery. He states that he was told by his surgeon that he needed a fusion, but a smaller surgery at that time. Following surgery, he states his symptoms improved with regard to the "sciatic pain", which resolved. However, he reports that there was persistent low back pain with continued radiation of pain into the lower extremities with numbness and tingling, which worsened over time.

He had additional injection treatments for pain and took medicines prior to a second surgery including spinal fusion, which was done on 9/11/20. During that time, he did not have any physical therapy or chiropractic care. He reports that symptoms prior to the second surgery included severe low back pain as well as the continued pain in both lower extremities with numbness and tingling. Following the fusion surgery and recovery, he states that his preoperative symptoms are essentially unchanged. He also has a very sensitive area in the left buttock, which he states was there before the surgery, but is now more prominent. There are no problems with coordination or bowel and bladder control. Treatment since the second surgery includes medications, and he is currently taking oxycodone 10 mg about four tablets a day. This is prescribed by his medical doctor. He does not wear a brace for the back and does not walk with a cane or any other assistive devices. He has had a recent sacroiliac joint injection, done about three weeks ago. He states that following the injection, he started getting fevers and sweats and was hospitalized for a number of days for possible infection. He was discharged yesterday, without a specific infection identified and without any continuing antibiotic treatment.

At the time of the accident, Mr. Christy was working in HVAC sales, and states that he continued for about eight months, but then was fired for missing time. A few days later, he began work at another job working only four hours a day in similar work, and worked on this job until 8/10/20. He has not worked since that date in HVAC sales or in any other occupation. He notes no prior history of any lower back pain, injury, or medical evaluation/care of any kind prior to 5/26/17. He also reports that since that date, there have been no new accidents or incidents involving the lower back.

On physical exam, Mr. Christy is 5 feet 9 inches tall and weighs 228 pounds. He has no difficulty changing positions by himself between sitting, standing, and lying supine. He is able to remove and replace his shoes and jacket without difficulty. He walks with a normal symmetric gait. He is able to heel and toe walk bilaterally, and reports lower back pain with attempting to do so.

Examination of the lower back reveals a well-healed 2 inch midline vertical incision which is tender to the slightest touch, especially to the left of midline. Contour of the

back is normal, and there is no spasm. Voluntary lumbar range of motion, measured with a goniometer, his forward flexion 60 degrees (normal 70-90) and extension 15 degrees (normal 15-25). Lateral bend is 10 degrees, left and right (normal 20-25).

Leg lengths are equal and there is no atrophy in the thighs or calves, all measured with a tape measure from standard anatomic reference points. Pulses are 2+ symmetrically in the feet. Hip rotation is full range bilaterally, with complaint of low back pain with rotation of both the left and right hip. Straight leg raise exam, tested both seated and supine, causes report of low back pain bilaterally. There is no radiating lower extremity pain.

Detailed neurologic evaluation of the lower extremities is performed. There is decreased sensation reported throughout the right lower extremity as compared to the left, including dermatomes L2-S1. Strength is 5/5 full for roots L2-S1, with give way noted due to reported lower back pain for muscles about the knees and ankles bilaterally. Reflexes are 1+ symmetrically at the knees and 1+ of the left ankle and absent on the right. Plantar responses are flexor. There is no clonus.

Records available for review include:

- 1. Plaintiff's Summons & Complaint, 1/24/20.
- 2. Defendant's Answer to Plaintiff's Verified Complaint, 3/6/20.
- 3. Plaintiff's Response to Notice for Discovery and Inspection, including: four photographs, 8/3/20.
- 4. Plaintiff's Response to Defendant's Combined Demands, 8/3/20.
- 5. Plaintiff's Verified Bill of Particulars, 8/3/20.
- 6. Records of Vassar Brothers Medical Center, 12/6/11-1/9/17.
- 7. Records of New York State DMV, Police Accident Report, 5/26/17.
- 8. Records of Vassar Brothers Medical Center, 5/26/17-2/3/21, including:
 - a. Emergency department records, 5/26/17, including:
 - i. Report of x-rays of the pelvis and chest.
 - ii. Report of CT of the head and cervical spine.
 - iii. Report of CT angiography of the chest, abdomen and pelvis with contrast.
 - iv. Report of CT of the thoracic spine and lumbar spine.
 - v. Report of x-rays of the right shoulder.
 - vi. Discharge instructions.
 - b. Report of MRI of the lumbar spine, 7/28/17.
 - c. Report of MRI of the lumbar spine, 5/14/18.
 - d. Emergency department records, 8/19/19, including:i. Report of x-rays of the chest.
 - e. Discharge summary, 8/22/19.
 - f. Emergency department records 8/26/19, including:
 - i. Report of CT angiography of the chest with contrast.
 - g. Emergency department records, 7/22/20.

- 9. Records of Gabriel Dassa, D.O, Orthopedic Surgery, 6/13/17.
- 10. Records of Rabi R. Sinha, M.D., Ralph Garguilo, PA, and Chandra Naik, M.D., Community Primary Care, 7/11/17-11/27/20.
- 11. Records of Elvis Rema, M.D. and Cynthia Delavalle, NP, North American Partners in Pain Management/Vassar Pain Poughkeepsie, 3/29/18-1/13/21.
- 12. Records of Vassar Pain at Dutchess Ambulatory Surgical Center, including:
 - a. Report of right sciatic nerve block, right L5-S1 TFESI, and right piriformis muscle TPI, 4/23/18. (Elvis Rema, M.D.)
 - b. Report of bilateral L5-S1 TFESIs, 5/9/19. (Elvis Rema, M.D.)
- 13. Records of Seth Neubardt, M.D. and Jack Stern, M.D., Brain and Spine Surgeons of New York, 5/23/18-9/24/20.
- 14. Records of White Plains Hospital, 5/31/18-9/12/20, including:
 - a. Operative report for right L5-S1 discectomy, 5/31/18. (Seth Neubardt, M.D.)
 - b. Operative reports for revision laminectomy with discectomy and instrumented interbody and posterolateral fusion L5-S1, 9/11/20. (Seth Neubardt, M.D. and Jack Stern, M.D.)
- 15. Reports of Medical Diagnostic Imaging, including:
 - a. MRI of the lumbar spine, 8/22/18.
 - b. MRI of the lumbar spine +/- gadolinium, 7/28/20.
- Records of Syed Naqvi, M.D., Cardiology, Westchester Medical Center, 5/1/19-2/4/20.
- 17. Records of Westchester Medical Center/Mid Hudson Regional Hospital, 5/20/19-8/29/19.
- Records of Bradley Cash, M.D., Spine Options, Pain Management, 9/16/20-10/1/20.
- 19. Records of NYSIF, 2017-2020, including:
 - a. Employee Claim C-3, 6/13/17.
 - b. IME reports of Dr. Adam Soyer, Orthopedic Surgery, 5/1/18, 10/9/18, & 3/6/19.
 - c. IME reports of Dr. Steven Hausmann, Orthopedic Surgery, 2/12/20, 2/27/20, 7/15/20, & 12/3/20.
- 20. Plaintiff's Deposition Transcript, 8/28/20.
- 21. 4 CDs of Study Images, Vassar Brothers Medical Center, including:
 - a. CT scan of the cervical spine, 5/26/17.
 - b. CT scan of the thoracic and lumbar spine, 5/26/17.
 - c. CT angiography of the chest, abdomen and pelvis with contrast, 5/26/17.
 - d. MRI of the lumbar spine, 7/28/17.
 - e. MRI of the lumbar spine, 5/14/18.
 - f. Fluoroscopic images of bilateral L5-S1 TFESIs, 5/9/19.
 - g. AP fluoroscopic image of bilateral SI joint injections, 2/22/21.

There is a police accident report dated 5/26/17 indicating that Mr. Christy's car was slowed for heavy traffic and the driver of the vehicle behind him was unable to stop striking the rear of his car causing damage to both.

Mr. Christy was seen in the emergency department at Vassar Brothers Medical Center on 5/26/17. In the history note, it indicates that he "was driving on I-84 at approximately 40 mph when he was rear-ended by a tractor-trailer driving roughly 70 mph. The patient states positive seatbelt, negative LOC, and negative airbag." It is also reported that he got himself out of the car and was ambulatory upon arrival of EMS. Complaints included neck pain, back pain, and right shoulder pain. Also noted was chest pain after the accident and that Mr. Christy took two sublingual nitroglycerines. On physical exam, there was lower back pain with bilateral straight leg raise.

CT of the head and cervical spine was done on 5/26/17 at Vassar Brothers Medical Center. Impression of the study report is "no acute intracranial or neck soft tissue abnormality is identified. There is no fracture." I have reviewed the images of the cervical spine CT scan, which shows chronic degenerative spondylosis C4-5 and C5-6 with moderate L>R foraminal stenosis at C4-5, and bilateral foraminal narrowing at C5-6. There is no focal disc herniation, and no traumatic structural findings.

CT scan of the thoracic and lumbar spine was done on 5/26/17 at Vassar Brothers Medical Center. Impression of the study report is "mild degenerative disc disease seen at L5-S1. No evidence of thoracic or lumbar spine fracture or subluxation...." In the body of the report, it notes mild loss of disc height at L5-S1 with vacuum disc phenomenon. Mild broad disc bulges noted with mild right lateral recess narrowing as well. Also reported is mild bilateral foraminal narrowing. I have reviewed the images of this study, which show mid-upper thoracic chronic degenerative spondylosis, as well as moderate DDD with retrolisthesis at L5-S1. Also at L5-S1, there is moderate bilateral facet arthrosis and moderate bilateral foraminal narrowing. There are no acute traumatic findings seen, and no lumbar disc herniations.

In the body of the report of a CT-angiogram of the chest, abdomen, and pelvis done on 5/26/17 at Vassar Brothers Medical Center, it notes "severe L5-S1 degenerative disc disease". I have reviewed the images of this study, which do show moderate disc degenerative disease with retrolisthesis at L5-S1. There are no acute traumatic findings.

Consultation by Dr. Ramalingam in the Vassar Brothers Medical Center Emergency Room was done on 5/26/17. The accident history was noted, and complaints included 10/10 pain to the thoracic, lumbar, and sacral area. There was reported mild paresthesias in the lower extremities bilaterally, and scattered contusions were observed in the right upper arm and forearm. Also noted was right paraspinal and scapular pain. Among the diagnoses by Dr. Ramalingam included cervicalgia and back strain/muscle spasm, acute pain secondary to injury. Following the evaluation, Mr. Christy was discharged that same day with prescriptions for Norco, Flexeril, and Naprosyn.

On 6/13/17, Mr. Christy saw Gabriel Dassa, D.O., an orthopedic surgeon for initial consultation. Complaints included pain in the cervical and lumbar spine as well as bilateral shoulders and headaches. Burning, numbness, and tingling down the extremities is also reported. On examination, there was tenderness and spasm and multiple trigger points in the cervical and lumbar spine with limited range of motion, positive Spurling test, and positive straight leg raise at 30 degrees. Physical therapy and chiropractic care were recommended, as well as a lumbar spine brace and pain medicines.

Mr. Christy was seen for follow-up visit at Community Primary Care on 7/11/17. There are no other prior records from this facility available for review. The follow-up visit was for persistent low back pain and a refill of a Percocet prescription. At another follow-up visit on 7/20/17, Mr. Christy was seen by Ralph Gargiulo, PA. It was noted that his "Workmen's Compensation related injury from 5/6/26 resulting in exacerbation of low back pain." Percocet was again prescribed, as well as a lumbar MRI.

MRI of the lumbar spine was done on 7/28/17 at Vassar Brothers Medical Center. In the report, it notes comparison to a prior MRI done on 1/13/14. Impression of the study report is "congenitally short pedicles. Multilevel foraminal and spinal canal compromise. No discrete herniation. Slight progression since prior study." In the body of the report, it notes a mildly narrowed and desiccated disc at L5-S1. It also notes a "mild broad-based disc and mild ligamentum flavum hypertrophy is resulting in moderate right and mild left-sided foraminal stenosis. No change." I have reviewed the images of the study, which show a broad disc bulge at L5-S1 with retrolisthesis, resulting in right>left recess and foraminal narrowing. There is also moderate stenosis at L3-4, and mild stenosis at L4-5, with moderate bilateral facet arthrosis at L3-4, L4-5, and L5-S1.

On 3/26/18, Mr. Christy followed up at Community Primary Care. Complaints at that time included severe lower back pain on the right down the right leg x13 days. He stated that it was "sciatica." Examination that day noted negative straight leg raise bilaterally. Strength and sensation were intact. There was limited overall range of motion of the back.

On 3/29/18, Mr. Christy was seen by Elvis Rema, M.D., of North American Partners in pain management, Vassar Pain Poughkeepsie for initial consultation. Complaints included right leg pain, with symptoms reported as starting after he was hit by a tractor-trailer from behind. Severe pain with intense numbness and tingling was noted to be worsening over the past week. He had physical therapy by report in the past without relief. Injection treatments were discussed.

On 4/23/18, Mr. Christy underwent a fluoroscopically-guided right L5-S1 transforaminal epidural steroid injection with right piriformis muscle trigger point injection. The procedure was performed by Dr. Rema at Vassar Pain at Dutchess Ambulatory Surgical Center. There were no reported procedural complications.

Mr. Christy followed up with Dr. Rema on 5/2/18, reporting one day of relief of pain. Examination noted tenderness in the right buttock area, and has felt to possibly due to Piriformis syndrome. Recommendation was for an MRI of the sacrum to rule out Piriformis syndrome. Mr. Christy was prescribed gabapentin and Medrol Dosepak.

MRI of the lumbar spine was done on 5/14/18 at Vassar Brothers Medical Center, ordered by Dr. Rema. Impression of the study report is "right-sided L5-S1 moderate-sized disc herniation within the lateral recess, which indents the right thecal sac as well as abuts the right S1 nerve root. Clinical correlation is advised. This is new compared to the prior MRI from 7/20/17. Mild spinal stenosis at L1-2, L3-4, L4-5 levels as above." I have reviewed the images of this study, and agree with the new prominent disc herniation at L5-S1 on the right, not seen previously. The moderate stenosis at L3-4 and more mild stenosis at L4-5, with facet degenerative changes L3-4, L4-5, L5-S1 are unchanged from the 7/28/17 study.

On 5/23/18, Mr. Christy saw Seth Neubardt M.D., of Brain and Spine Surgeons of New York for initial consultation. Complaints included low back pain in the right leg. Dr. Neubardt reported that Mr. Christy "states that he had his chronic low back pain aggravated by a motor vehicle accident on 5/26/17." A three-month history of right-sided leg pain with numbness and weakness in the leg was noted, with no left-sided symptoms. Examination at that time noted a normal gait and no tenderness with limited range of motion and decreased sensation in S1 dermatomes on the right. Also noted was weakness to the right foot evertor. He was able to heel and toe stand. Straight leg raise was positive on the right. The recent MRI was reviewed, noting the herniated disc on the right with disc degeneration at L5-S1. Recommendation was for lumbar microdiscectomy, noting that this was to help the right leg pain and would likely have no impact on his "chronic low back pain."

On 5/31/18, Mr. Christy underwent lumbar spine surgery at White Plains Hospital, performed by Dr. Neubardt and Dr. Jack Stern. The procedure performed was a lumbar microdiscectomy on the right side at the L5-S1 level. There were no reported complications.

Mr. Christy followed up with Dr. Neubardt on 7/11/18, who noted that "his preoperative right leg symptoms are completely gone. He has been able to walk two miles a day. He has been working four hours a day, but unfortunately because of seven days of low back pain, he has been unable to work more than that." Dr. Neubardt noted that Mr. Christy was "still suffering from chronic back pain related to disc degeneration and therefore may have his work limited to four hours a day."

Mr. Christy saw Dr. Rema on 7/31/18, noting resolution of the leg pain after surgery and doing well for about two weeks and then "the pain suddenly recurred." There was residual discogenic back pain, and plan was for an additional injection.

On 8/22/18, MRI of the lumbar spine was done at Medical Diagnostic Imaging, ordered by Dr. Rema. Impression of the study is "L1-2 and L2-3 mild central canal stenosis. L3-4 and L4-5 mild-to-moderate central canal stenosis. L5-S1 moderate central canal stenosis with mild bilateral foraminal stenosis. No disc space or osseous signal abnormality. Anatomic facet alignment."

On 5/9/19, Mr. Christy had a bilateral L5-S1 transforaminal epidural injection done by Dr. Rema at Vassar Pain at Dutchess Ambulatory Surgical Center. There were no reported procedural complications.

From May 2019 through August 2019, there are multiple records regarding cardiac issues and hospital admissions with procedures performed. None are related to the lower back.

MRI of the lumbar spine with and without contrast was done on 7/28/20 at Medical Diagnostic Imaging, ordered by Dr. Rema. Impression of the study report is "L1-L5 mild central canal stenosis without significant interval change. Status post left L5-S1, left hemilaminotomy with recurrent/residual mild central canal stenosis and mild-to-moderate bilateral foraminal stenosis improved from prior. Mild facet arthropathy."

On 7/30/20, Mr. Christy again saw Dr. Neubardt, whom he had not seen in over two years. The visit note indicates a report of chronic low back pain, which was worsening over the last several months. The interval history of open heart surgery and stent placement in 2019 was noted, and that Mr. Christy had not worked since August of 2019. Complaints included low back pain radiating to both legs, now left greater than right to the sole of the feet with tingling. Examination reported an "extremely" positive SLR on the left side and to a lesser extent contralateral lifting right leg producing left-sided low back pain. Dr. Neubardt reviewed the MRI of the lumbar spine, noting that it "does show some residual recurrent herniated disc at L5-S1 with disc degeneration isolated to that level." Recommendation was for revision surgery with fusion at L5-S1.

Also on 7/30/20, Mr. Christy saw Dr. Jack Stern, the co-surgeon for the discectomy procedure, for consultation. Dr. Stern reviewed the MRI, who felt that there was "severe disc degeneration at L5-S1 whereas the other disc levels are really quite benign and, in addition, he has severe Modic changes at the L5-S1 level." He agreed with the recommended decompression and fusion surgery.

On 7/31/20, Mr. Christy was again seen in Dr. Rema's office for a pain medicine prescription. He was given Percocet. This was refilled on 9/21/20.

On 9/11/20, Mr. Christy underwent lumbar spine surgery at White Plains Hospital Center. The procedure, performed by Dr. Neubardt and Dr. Stern, included a revision decompression at L5-S1 with an instrumented interbody and posterolateral fusion. There are no reported procedural complications. Mr. Christy spent only one day in the hospital, being discharged on 9/12/20.

There is a phone call note from Dr. Neubart's office dated 9/14/20. Mr. Christy had called wanting a refill for Percocet, stating that he had been on the medication for 5 years prior.

On 9/16/20, Mr. Christy saw Bradley Cash, M.D., a pain management doctor, for consultation and care. Complaints included low back pains 10/10, which was caused by an accident, and also noted was "a history of similar pain prior back pain worsened from accident." It was reported that the last day Mr. Christy had worked was 8/15/19. He was taking Percocet four times a day. Diagnoses from Dr. Cash included long-term opioid use and degenerative disc disease with postlaminectomy syndrome. He was given MS Contin and was to take less Percocet over time.

On 9/24/20 Mr. Christy followed up at Community Primary Care where his staples were removed, and his Percocet prescription was refilled.

There is a note in the records from Dr. Neubardt on 9/24/20, who had called Mr. Christy stating that "I called to check in on him because he did not want to make an appointment for a follow-up with us." He consulted Dr. Brad Cash for pain management and his primary care physician who took out the staples. Dr. Neubardt reported that Mr. Christy noted occasional numbness and weakness to the legs, which was not worse than before surgery. There are no records of any in person follow-up care with Dr. Neubardt following the surgery.

On 10/1/20, Mr. Christy followed up with Dr. Cash. Dr. Cash noted that Mr. Christy "did sign paperwork and has already broken the agreement as he has gotten oxycodone from his PCP." Dr. Cash noted that "I will no longer give him opioids." There are no other records of follow-up care with Dr. Cash in the records provided.

On 1/13/21, Mr. Christy followed up with Cynthia Delavalle, a nurse practitioner at Dr. Rema's office. Ms. Delavalle specifically put in her note on that date that "his low back pain stems from an MVA while he was working in 2016 where he was rear-ended by a tractor-trailer at a high speed. He states prior to this injury he had no complaints and was able to be active and play golf routinely." Bilateral SI joint injections were recommended, as well as x-rays of the left hip.

On 2/3/21, x-rays of the left hip were done at Vassar Brothers Medical Center for complaints of left buttock pain. The report indicates mild left hip osteoarthritis.

An AP fluoroscopic image from Vassar Brothers Medical Center done 2/22/21 is reviewed, showing needles in both SI joints presumably for pain management injections. The AP image shows bilateral screw fixation L5-S1 with a titanium interbody cage.

In summary, Mr. Christy reports involvement in a motor vehicle accident on 5/26/17, when his vehicle was rear-ended while driving. He was taken by ambulance from the scene to an emergency room, complaining of pain in the neck, the back, and the left
Re: Philip Troy Christy March 16, 2021 Page 10

shoulder. His neck and shoulder pain resolved, but back pain persisted. The records indicate a prior history of chronic lower back pain, with likely regular narcotic use for years prior. The initial lumbar CT on the day of the incident and the lumbar MRI done only 2 months later both show chronic degenerative changes at L5-S1 without report of any acute traumatic findings or focal disc herniations. The MRI is reported as unchanged from a prior 2014 scan. More severe right lower extremity pain does not begin until about nine months after the reported accident, and follow-up MRI at that time notes a new right-sided disc herniation, which was not seen on the initial post-accident CT or MRI. He then undergoes discectomy, which helps his more acute right leg pain, but not his chronic lower back pain.

The first record reviewed with Mr. Christy's primary care physician is a follow-up visit on 7/11/17, when a Percocet prescription is refilled. It would be helpful to note when Percocet prescriptions began, either before or after motor vehicle accident. A later medical record in 2020 notes that Mr. Christy reported a prior 5 year history of Percocet use, strongly suggesting use prior to the 5/26/17 accident. It would also be helpful to have the report and images of the 2014 MRI, and the records of medical care surrounding the need for this scan.

With regard to the lower back, there is no evidence of any traumatic structural injury resulting from the 5/26/17 motor vehicle accident. The focal disc herniation on the right at L4-5 does not occur until nine months later, and is not seen until a follow-up MRI done a year after the accident. This is a new finding, and is not temporally related to the motor vehicle accident in question.

Mr. Christy sustained a lumbar sprain/strain resulting from the reported 5/26/17 motor vehicle accident. He continued to work many months, and then curtailed his work hours, but again continued to work until the more acute herniation occurring nine months later. This herniation is the result of progression of the degenerative disease, and is not causally related to the 5/26/17 motor vehicle accident. The surgical treatment was appropriate, including the fusion done later because of continued back pain from the advanced degenerative disease.

It is unclear whether Mr. Christy has had any follow-up care after the fusion surgery, as there are no records of any x-rays being done or him having seen a surgeon. He continues to use narcotic pain medicines prescribed regularly by his primary care physician. This is suboptimal pain management care at best, and more appropriate care should be focused on switching off of chronic narcotic pain medicines by a pain management specialist.

Currently in the office today, Mr. Christy has signs of symptom magnification and exaggeration throughout his examination. There are no focal anatomic deficits on examination, and the reported decreased sensation throughout the right lower extremity is in a nonanatomic distribution and is not spinal related. He is fully functional in the office today, and should be able to find gainful employment.

Re: Philip Troy Christy March 16, 2021 Page 11

The above represents my opinions, with a reasonable degree of medical certainty, based on all the information provided to me to date. I, Jeffrey M. Spivak, M.D., am an orthopedic spinal surgeon duly licensed to practice in the State of New York. Pursuant to CPLR Section 2106, I am not a party in the above entitled action. I hereby affirm, under penalty of perjury, that the foregoing is true and accurate to the best of my knowledge. No doctor/patient relationship exists or was implied based on this examination. No preexam questionnaire or intake sheet was used in conjunction with this independent examination.

Sincerely,

Jeffrey M. Spivak, MD Chief of Orthopedic Spine Service –Technology and Innovation New York University Langone Medical Center Clinical Professor of Orthopedic Surgery, New York University School of Medicine

1 J. SPIVAK, M.D 2 JEFFREY MICHAEL SPIVAK, 3 M.D., called as a witness, having been first duly 4 sworn by a Notary Public within and for the State 5 of New York, was examined and testified as follows: 6 7 8 9 EXAMINATION BY 10 MR. SMILEY: 11 Ο. What is your name, please? 12 Jeffrey Michael Spivak, M.D. Α. 13 Ο. Good morning, Dr. Spivak. 14 Α. Good morning. 15 My name is Andrew Smiley. I'm going to Ο. 16 ask you some questions today. As you know, I have 17 rendered a payment to you for \$5,300, I believe, 18 for your appearance today for two hours of a 19 deposition, so we'll go up until 12:30. 20 And since we do have that time limit, I 21 would ask that you please try and give as concise 22 answers to my questions as you can. And if more of 23 an explanation is needed you can let me know and I 24 can also ask you follow-ups; okay? 25 Yes. Can I just ask who else is with us? Α.

1 J. SPIVAK, M.D 2 Ο. Yes, you can ask. 3 You have your lawyer, Johan Obregon; my 4 associate, Michael Solomon; and the court reporter, Randi Vecchione. 5 6 Perfect. Thank you. Α. 7 Q. And where are you located at this moment, 8 Doctor? 9 I'm in Manhattan at my hospital Α. 10 administrative office. 11 Ο. Okay. Is anybody with you there? No. I'm alone in this room. 12 Α. 13 Ο. Now, do you have a file on this case with 14 you? 15 I have a number of things with me. Α. Ι 16 have a copy of my IME report. I have my CV. And I have the basic kind of intake and scribble sheet, I 17 18 call it, for him. That's essentially my file. 19 Ο. What about other documents that you 20 reviewed; how do you maintain those? 21 Α. I don't maintain those. They're on CDs 22 and generally they're electronically reviewed. And 23 after reviewing them they either get sent back or 24 discarded. 25 Do you currently have any medical records Ο.

Page 8 May 18, 2021

1 J. SPIVAK, M.D 2 in your possession, either hard copy, a digital 3 file, computer cloud in any way accessible to you 4 related to Philip Troy Christy? Not accessible to me. The only thing I 5 Α. 6 have, I was recently sent an MRI CD and report. I 7 believe it was from 2014, but I apologize, I did 8 not bring that with me. That was an accident. 9 Ο. When did you receive that? 10 Α. Last week. 11 When you say "you did not bring that with Ο. 12 you," where would that be located, if not at your office? 13 It's at my home office desk. 14 Α. 15 Ο. Did you charge any additional fee to 16 review those records that were sent to you? 17 Not that I know of, no. Α. 18 Ο. Do you have copies of all your billing statements relative to this case? 19 20 Not with me, no. Α. 21 Ο. Can you produce those to Mr. Obregon? 22 I would be happy to. Α. Sure. MR. SMILEY: We call for the production 23 24 of all billing statements. We have requested 25 this in writing already.

Page 9 May 18, 2021

1 J. SPIVAK, M.D 2 MR. OBREGON: Just for the record, I 3 e-mailed those to you before this deposition 4 started. And, obviously, this is being 5 recorded by video, I just ask that I be 6 provided with a copy of the video as well. 7 MR. SMILEY: Yes. Absolutely. We'll 8 provide that. 9 And we only got a billing for an updated 10 record review that you sent over today, so if 11 there's any additional billing for initial 12 exam and review we would ask for a copy of that, please. 13 DOCUMENT/INFORMATION REQUESTED: 14 15 Ο. Dr. Spivak, how is it that you got 16 involved in this case? 17 Α. I was hired to do an independent medical 18 examination. 19 Ο. Who hired you? 20 I guess Mr. Obregon's firm. I'm not sure Α. 21 who in the firm hired me, who makes that decision. 22 Had you worked for Mr. Obregon or his law Ο. firm prior to this case? 23 24 The name is actually not very familiar, Α. 25 but I certainly may have done an examination or two

1 J. SPIVAK, M.D 2 before. I've not met Mr. Obregon and seen his face 3 until today. 4 Q. The law firm that he works for, Kerley, 5 Walsh, have you done work for that firm prior to 6 this case? 7 Α. As I said, it's not -- it's somewhat 8 familiar to me, so I probably have, but I have no 9 specific recollection. 10 Do you know how it was that you were Ο. connected with the firm for this case? 11 12 No, I do not. Α. 13 Ο. Do you get some type of letter requesting 14 your assistance? 15 Α. It's often a letter or a phone call. 16 More commonly it's a phone call to the office. 17 Did you receive any type of Q. 18 correspondence from Mr. Obregon or any person at 19 his law firm to engage you in this case? I assume I did. I don't take care of 20 Α. 21 that, so I don't see that, but we can certainly 22 produce any correspondences for you. That's no 23 problem. 24 All right. Well, I would ask that you Ο. 25 please produce that to Mr. Obregon so that we can

Page 11 May 18, 2021

1 J. SPIVAK, M.D 2 follow up on that. And to the extent that it 3 hasn't been requested, which I believe it has 4 already, we would follow up in writing on that. 5 DOCUMENT/INFORMATION REOUESTED: 6 When you were engaged at some point to Ο. 7 participate in this case, were you asked to do 8 anything specifically? 9 Α. No. 10 Were you asked to examine Mr. Christy? Ο. 11 Α. Yes. 12 Were you asked to render specific Ο. 13 opinions on any specific issues? 14 Α. Yes. 15 Ο. What were you asked to render opinions 16 on? Anything related to his spine. 17 Α. I do 18 independent medical examinations regarding spinal 19 issues. Many patients have other injuries, 20 associated things in addition to spine, but I said 21 nothing specific because for any claimant I'm going 22 to examine, it's always related to whatever spinal issues they have. Sometimes neck. Sometimes back. 23 24 Sometimes middle back. Whatever is related to the 25 spine that's what I examine, review records for,

1 J. SPIVAK, M.D 2 and make opinions on. 3 Ο. Were you asked to render an opinion on 4 what, if any, treatment that Mr. Christy had was related to his automobile accident of May 26, 2017? 5 6 Α. Yes. 7 Q. And did you specifically review the case 8 to determine what, if any, treatment he received 9 was causally related to the accident of May 26, 10 2017? 11 Again, that's part of my overall review, Α. 12 but not specifically reviewing for that information. 13 Did you in fact make any conclusion with 14 Q. 15 regard to whether any specific treatment received 16 by Mr. Christy since the date of his accident to 17 present was or was not causally related to his 18 accident? 19 Α. Yes, I believe I did. 20 And what were your opinions as to what Q. 21 was and what was not causally related to the accident? 22 23 Α. I would have to refer to my report, if 24 that's okay with you. 25 Yes, you may. Just direct me, please, to Ο.

Page 13 May 18, 2021

1	J. SPIVAK, M.D
2	where you're referring to in your report.
3	A. On page ten, third paragraph from the
4	bottom I was discussing the herniated disks that
5	Mr. Christy had and I opined that the quote, disk
6	herniation is the result of progression of the
7	degenerative disease, and is not causally related
8	to the 5/26/17 motor vehicle accident.
9	Q. Other than reference to that specific
10	disk herniation not being causally related to the
11	accident, did you render any opinions as to whether
12	any other conditions or treatment rendered to
13	Mr. Christy following this accident was or was not
14	causally related?
15	A. I don't believe I did.
16	Q. As you sit here today, do you have an
17	opinion as to whether specific treatment rendered
18	to Mr. Christy following this automobile accident
19	was or was not causally related?
20	A. I would have to review the treatments,
21	but I would have an opinion, yes.
22	Q. And what is your opinion?
23	A. Again, I don't recall. I would have to
24	review my notes to know exactly what was done, but
25	I did opine that he sustained a lumbar strain or

Page 14 May 18, 2021

1	J. SPIVAK, M.D
2	sprain resulting from the accident, so treatment
3	related to that, physical therapy, sometimes even
4	injections, things like that would be appropriate
5	and would be causally related.
б	Q. What, if any, treatment that you observed
7	in the records that you reviewed in this case is
8	not, if any, causally related to the automobile
9	accident?
10	A. His surgeries.
11	Q. Which surgery?
12	A. Both surgeries, the diskectomy surgery
13	and the subsequent spinal fusion.
14	Q. So it is your opinion within a reasonable
15	degree of medical certainty that those two
16	surgeries were not causally related at all to the
17	rear-end accident of May 26, 2017?
18	A. That's correct.
19	Q. Do you have an opinion as to whether or
20	not there was an aggravation of a preexisting
21	spinal condition as a result of this accident?
22	A. I believe he had a lumbar sprain or
23	strain as a result of the accident, not an
24	aggravation of some preexisting condition.
25	Q. And do you have an opinion as to whether

Page 15 May 18, 2021

1 J. SPIVAK, M.D 2 or not the lumbar strain or sprain required any 3 medical treatment? 4 Α. Yes. As I said before, the nonoperative 5 treatment, things like physical therapy, 6 chiropractic care, acupuncture, medicines, those 7 would all be appropriate treatment for that. 8 The epidural injections, would you agree Ο. 9 that those are causally related and required as a result of his accident? 10 11 Α. They could be, yes. 12 When you say "they could be," are you Ο. saying they're not causally related or they are? 13 14 I'm saying they may or may not be. I Α. 15 don't know. I can't say for sure. 16 Why can't you say for sure? Ο. 17 Because in reality for a lumbar sprain or Α. 18 strain an epidural injection is not actually appropriate, but for a herniated disk or for 19 pinched nerves related to that it would be 20 21 appropriate. 22 So are you saying they're not causally Ο. related? 23 24 I'm saying I'd have to review the records Α. 25 in more detail to know whether I think that they

Page 16 May 18, 2021

1	J. SPIVAK, M.D
2	were causally related in terms of relative to the
3	knowledge I have right now answering your question.
4	Q. Wasn't that part of what you were asked
5	to do was to review all of the records and
6	determine what, if any, treatment was or was not
7	causally related?
8	MR. OBREGON: Objection to form. You can
9	answer.
10	A. Yes, I guess that was part of what I was
11	supposed to do.
12	Q. So as we sit here today, is it fair to
13	say that as a review of all the records that you
14	identified in your report and in addition to the
15	2014 MRI you were just provided that the only
16	treatment that you are concluding was not causally
17	related in any way to the accident of May 26, 2017
18	were the two surgeries; is that correct?
19	A. Yes.
20	Q. And as you sit here today, you are not
21	saying that any of the other treatment that you
22	reviewed that was provided to you was not causally
23	related other than those two surgeries; correct?
24	A. Can you repeat that question again? I'm
25	sorry.

Page 17 May 18, 2021

1

1	J. SPIVAK, M.D
2	Q. Sure. Other than those two surgeries, is
3	it fair to say that all of the other treatment that
4	you saw contained in all of the records you
5	reviewed was causally related to the May 26, 2017
6	accident?
7	MR. OBREGON: Objection to form.
8	A. No. No. I just told you no with respect
9	to the epidural steroids. The answer is I don't
10	know.
11	Q. Well, let me phrase it in a different
12	way.
13	Is there any treatment other than the two
14	surgeries that following your examination of
15	Mr. Christy and your review of all of his records
16	since the date of the accident that you opine is
17	not causally related to the automobile accident?
18	A. Much of the nonoperative treatment that
19	was done prior to surgery may or may not be
20	causally related given his history that's alluded
21	to in the records of prior back issues, possibly
22	being on narcotic medicines before the accident,
23	and the like.
24	Q. You keeping saying "may or may not be
25	related." My specific question is: Other than the

Page 18 May 18, 2021

1	J. SPIVAK, M.D
2	two surgeries that you referenced that you say are
3	absolutely not related in any way to his accident
4	of May 26, 2017, do you have an opinion that any
5	other treatment you reviewed was not causally
6	related to the accident as well?
7	A. No.
8	Q. Is it fair to say that you spent at least
9	four hours reviewing all of the medical records
10	provided to you of Mr. Christy?
11	A. Yes.
12	Q. Is it fair to say that you reviewed
13	hundreds, if not thousands of pages of medical
14	treatment records?
15	A. Yes.
16	Q. And is it also fair to say that all of
17	the records that you reviewed prior to writing your
18	report were from either the date of accident, May
19	26, 2017, or sometime after the date of the
20	accident, May 26, 2017?
21	A. Yes, that's correct.
22	Q. Other than the 2014 MRI and/or report
23	that you were recently provided, have you reviewed
24	any withdrawn.
25	Other than the 2014 MRI and report that

DEITZ Court Reporting... A Lexitas Company 800-678-0166

Page 19 May 18, 2021

1	J. SPIVAK, M.D
2	you were recently provided, are you aware, by way
3	of reviewing all the records you did and any
4	references contained therein, if Mr. Christy had
5	any treatment prior to May 26, 2017 for his back?
6	A. In terms of treatment the only thing I
7	have that was alluded again, alluded to in the
8	records by Mr. Christy was a note, I think, from
9	2010 indicating I'm sorry, from 2020 indicating
10	that he had been taking narcotic medicines for five
11	years. That would put it well before the time of
12	the accident.
13	Q. Other than that note you're referring to,
14	in the hundreds to thousands of medical records you
15	reviewed, did you see any reference anywhere of
16	Mr. Christy receiving treatment for a prior back
17	issue before the accident of May 26, 2017?
18	A. Not that I recall.
19	Q. Other than that note that you just
20	referred to, are you aware of any symptomatic pain
21	that Mr. Christy was having from his back prior to
22	May 26, 2017?
23	A. No.
24	Q. Is it fair to say that in your review of
25	the hundreds, if not thousands pages of medical

Page 20 May 18, 2021

1 J. SPIVAK, M.D 2 records that you reviewed relative to Mr. Christy's 3 care and treatment, that more likely than not if he 4 had received any significant treatment for lower 5 back pain prior to the date of the accident that 6 would have been reflected somewhere in those 7 records? 8 MR. OBREGON: Objection to form. You can 9 answer. 10 No, not necessarily. Α. 11 Did you ask Mr. Christy when you examined Ο. 12 him about his prior back condition, if any? 13 Α. Yes, I did. 14 And what did he tell you? Q. 15 I don't see a sentence alluding to it in Α. 16 my note, but on my scribble sheet where I do ask 17 that question there's a negative sign, so I would 18 assume he told me there was no prior history, even 19 if I can't find that reflected in my note. 20 And you reviewed his deposition Q. 21 transcript, according to your report? 22 From 8/28/20, yes. Α. 23 Q. And did you review that and read it? 24 Α. I read it to a degree, yes. 25 Is it fair to say that upon review of Ο.

Page 21 May 18, 2021

٦

1	J. SPIVAK, M.D
2	that transcript when he was asked questions about
3	any prior treatment of his back that he responded
4	in sum and substance that other than muscle pain
5	that he had back around 2014 or '15 where he had it
6	checked out and was told it was just muscle pain he
7	had received no other treatment; did you see that?
8	A. I don't recall the specifics of the
9	transcript at this point, but that would not
10	surprise me.
11	Q. Is it fair to say that you have no reason
12	to dispute that Mr. Christy was asymptomatic with
13	regard to his lumbar spine prior to May 26, 2017?
14	A. Yes, that would be fair to say.
15	Q. And as you sit here today, is it your
16	opinion that he had any type of prior lumbar back
17	condition prior to May 26, 2017?
18	A. Yes.
19	Q. What opinion do you have with regard to
20	whether or not he had a prior lumbar spine
21	condition?
22	A. Well, he had an MRI from 2014 showing
23	degeneration of a disk. There has to be a reason
24	for that MRI to have been done. There are probably
25	medical records surrounding that that we just don't

1 J. SPIVAK, M.D 2 have to look at today. 3 I'm asking you what the basis is of your Ο. 4 opinion that he had a prior lumbar spine condition? That's the basis. 5 Α. 6 Ο. The basis is that he had an MRI in 2014? 7 Α. He had an MRI in 2014 and the allusions, 8 as I said, to preexisting medication use and the 9 prior MRI and the notes reviewed. 10 But you have not observed anything Ο. 11 independently to form an opinion that he had a prior condition of his lumbar spine other than 12 13 looking at a 2014 MRI; correct? 14 Α. Yes. 15 Ο. And did you see something in the 2014 MRI 16 that indicated to you that at that time he was 17 suffering from some type of prior lumbar condition? 18 Α. I would have to look back at the actual Usually there's a history that says, low 19 report. 20 back pain or something like that, but I don't know 21 what it says because I don't have it in front of 2.2 me. I'm going to pull up the report and share 23 Q. 24 it with you. I'm not going to mark this as an 25 exhibit because I will reference it as the January

Page 23 May 18, 2021

1 J. SPIVAK, M.D 2 13, 2014 MRI taken at DRA Imaging in Poughkeepsie, 3 New York. 4 And do you see my screen, Dr. Spivak? 5 Α. Yes. 6 Do you see the ordering physician was Ο. 7 someone named Holly Mault, M-A-U-L-T, NP? 8 Right, a nurse practitioner. Α. 9 Ο. That's not an orthopedist; right? 10 It's a nurse practitioner. Α. 11 And a nurse practitioner is not an Ο. 12 orthopedist; correct? Not even a doctor, that's correct. 13 Α. 14 Not even a doctor. Q. 15 Working for a doctor potentially, but not Α. 16 a doctor. You don't know who Nurse Mault is; 17 Q. 18 correct? 19 Α. That's correct. 20 But what you do know is that it wasn't an Q. 21 orthopedist that sent him for this MRI; correct? 22 No, it may have been ordered by Miss Α. 23 Mault at an orthopedist's direction. I don't know. 24 You know, the person writing -- there are many 25 things that I order that my physician assistant

Page 24 May 18, 2021

1 J. SPIVAK, M.D 2 does the actual paperwork, so it's addressed and 3 noted to her. 4 Q. Okay. 5 Α. I don't know who actually ordered or who 6 was behind it. Just that the actual hands-on of 7 ordering was done by Miss Mault. 8 Now, it says, in clinical history, Ο. 9 patient complains of lower back pain after 10 shoveling ten days ago. Prior here in 2005. Do 11 you see that? 12 Α. Yes. 13 Ο. Okay. So he has lower back pain and 14 that's why he's having this MRI, as far as we can 15 tell from this report; right? 16 Α. Yes. Now, let's look through the findings of 17 Q. 18 this report. I'll scroll through slowly, and I'll 19 here at least on my screen where it looks like, L1 20 through L5 is benign; right? There's really no 21 findings anywhere? 2.2 Α. That's correct. 23 Q. And then at L5-S1 it says the disk is 24 moderately narrowed and desiccated. There is a 25 small focal central disk protrusion which abuts,

Page 25 May 18, 2021

1 J. SPIVAK, M.D 2 but does not -- it says performs, which is probably 3 a typo, the thecal sac. There is mild bilateral 4 foraminal stenosis. Do you see all of that? 5 Α. Yes. 6 Now, would you consider this to be a Ο. 7 normal MRI, an abnormal MRI, an MRI that is 8 evidence of some type of condition that he has, or 9 something else, Doctor? 10 It's an abnormal MRI. Α. And what makes it an abnormal MRI? 11 Ο. 12 The findings at L5-S1. Α. 13 Ο. What findings at L5-S1 make it abnormal? 14 Everything that's written there. The Α. 15 disk being desiccated. The disk being narrowed. 16 The small focal central protrusion. The foraminal 17 stenosis. Those are abnormalities. 18 Okay. And is it fair to say that at this Ο. 19 time with this MRI he could have been asymptomatic; 20 correct? 21 Α. Yes. 22 And he could have been symptomatic; Ο. 23 correct? 24 That's correct. Α. 25 Is it also fair to say that if you were Ο.

Page 26 May 18, 2021

1 J. SPIVAK, M.D 2 to take most men around age 50 and had them have an 3 MRI of their lumbar spine that many of those 4 individuals could be asymptomatic and have findings 5 such as this; correct? 6 Α. That's correct. 7 Q. This MRI in and of itself is not evidence 8 of some preexisting spinal condition; is it? 9 MR. OBREGON: Objection to form. You can 10 answer. 11 Α. It's the clinical history. It's a 12 history of low back pain, so there is pain 13 associated with it. It's the clinical history. 14 It's not a big, prolonged clinical history, but 15 there is a clinical syndrome of back pain at the time of this MRI. 16 And in orthopedics clinical history is a 17 Q. 18 very important part of your role as a physician and a diagnostician; correct? 19 20 Α. Yes. 21 Ο. And it's important to take a history of a 22 patient to form a clinical impression; correct? 23 Α. Yes. 24 And it's important to find out when a Ο. 25 patient has pain and when a patient doesn't have

Page 27 May 18, 2021

1 J. SPIVAK, M.D 2 pain; is that correct? 3 Α. Yes. 4 Q. It's important to look at as many records 5 as possible to see about prior treatment to assist 6 you in forming a clinical impression; right? 7 Α. Sometimes that's important. Not always, 8 but many times. 9 So if a patient of yours had an MRI like Ο. 10 this and was talking about having back pain, what, 11 if any, treatment would you recommend? 12 I would probably recommend potentially Α. 13 physical therapy and nonsteroidal antiinflammatory 14 medicine and giving it time. 15 Ο. Okay. You wouldn't recommend surgery 16 based on this, would you? 17 Α. No. 18 Ο. You wouldn't recommend epidural 19 injections on this, would you? 20 Α. That might be later on, but it would not 21 be part of the first line recommendation. What does it mean that a disk is 22 Ο. 23 moderately narrowed and desiccated? 24 It means that its height is shortened, Α. 25 and it's -- desiccated just means drying out.

Page 28 May 18, 2021

1 J. SPIVAK, M.D And is that what we know to be 2 Ο. 3 degenerative disk disease? 4 Α. Yes. 5 Ο. So is it fair to say that a review of 6 this MRI report would indicate to you that 7 Mr. Christy in January of 2014 had degenerative disk disease at L5-S1? 8 9 Α. Yes. 10 What about at L1 through L5, does he Ο. 11 degenerative disk disease there? 12 Α. The report indicates some very mild changes at L1-2, and no abnormalities at the other 13 14 levels. 15 Would you say that he had degenerative Ο. disk disease at L1-L2 at the time of this MRI? 16 He has some elements of disk 17 Α. 18 degeneration. I don't know if I would use the word disease. 19 20 What about at L2-L3, would you call that Q. 21 degenerative disk disease at this time? No, there's no evidence of that based on 22 Α. 23 the report. 24 And there's also no evidence of any type Ο. 25 of degenerative disk disease at L3-4 or L4-5 at the

Page 29 May 18, 2021

1 J. SPIVAK, M.D time of this MRI in 2014; correct? 2 3 Α. Based on the report that's correct. 4 Q. And did you review the actual film, image of this 2014 MRI? 5 6 Α. Yes. 7 Q. And do you have any reason to disagree 8 with the conclusions contained in this report from 9 this radiologist? 10 I have no reason to disagree. I just Α. 11 don't have it in my head or remember it enough to 12 definitely agree. That's all. 13 Ο. Is it your intention to generate a 14 follow-up report with your findings of that 2014 15 MRI for Mr. Obregon and his firm? 16 Α. I'm not sure. That's up to him to 17 request, but if he requests it I would generate 18 that. 19 Ο. Now, here it says at L5-S1 there's a 20 small focal central disk protrusion. What is that? 21 Α. That's a disk herniation essentially. 22 The word protrusion -- protrusion is a type of disk herniation. 23 24 Is there a difference between the Ο. 25 terminology of a herniation and the terminology of

1	J. SPIVAK, M.D
2	a protrusion?
3	A. No. The differential is between
4	again, a protrusion is a type of a herniation.
5	There are other types of herniations. The
6	differential is with the word disk bulge.
7	Q. And what's the difference between a disk
8	bulge and a disk protrusion?
9	A. A disk bulge is a generalized nonfocal
10	expansion of the disk as though you took a balloon
11	and pressed on it from the top on a table and you'd
12	see it expand around the sides. That's a bulge.
13	A protrusion or a disk herniation, I
14	should say, because there are different types,
15	refers to a focal area where that extension has
16	come out because of a defect in the outer part of
17	the disk, not a generalized wearing away and
18	overall expansion of the circumference of the disk.
19	Q. What other types of herniations of a disk
20	are there other than a disk protrusion since I
21	believe you said it's one type of herniation?
22	A. Right. There are three types. Disk
23	protrusions, disk extrusions, and disk
24	sequestrations.
25	Q. Did I understand you to say there are

Page 31 May 18, 2021

1 J. SPIVAK, M.D 2 three types of herniations; a protrusion, an 3 extrusion, and a sequestration? 4 Α. That's correct. 5 Ο. What is the difference between a 6 protrusion and an extrusion? 7 Α. Protrusion is an example of what we call a contained disk herniation where the material has 8 9 not -- the central material that leaves the disk, 10 the actual herniation is still contained within outer fibers of the disk. 11 12 An extrusion, a piece of the disk 13 material has come further out of place and is now free of the outer confines of the disk, but still 14 15 attached to the disk. 16 And in a sequestration the disk fragment 17 has not only come out of place, but has fallen so 18 far out of place that it no longer connects to the parent disk where it came from. 19 20 Q. Would it be fair for a radiologist in 21 reviewing this MRI, instead of using the term 22 protrusion to have used the term herniation and say there's a focal central disk herniation; would that 23 24 be appropriate verbiage? 25 Α. Yes.

Page 32 May 18, 2021

1	J. SPIVAK, M.D
2	Q. And can you tell the location of the
3	herniation here, whether it's the right side, the
4	left side, or somewhere else relative to the thecal
5	sac or spinal cord?
6	A. The word central implies that it's right
7	in the center, not to the right or left.
8	Q. Okay. So is it fair to say that on
9	January 13, 2014 there's no finding of any disk
10	bulges in Mr. Christy's back; correct?
11	A. There's no report of that, that's
12	correct.
13	Q. And there is a report of a herniation of
14	a disk at L5-S1; is that correct?
15	A. Yes.
16	Q. Now, is it fair to say that based on that
17	MRI report alone you would not diagnose Mr. Christy
18	as having some type of degenerative back condition
19	going on?
20	A. Based on the MRI report alone, that's
21	correct.
22	Q. And based on that MRI report alone you
23	certainly wouldn't say that prior to May 26, 2017
24	he had some type of prior back condition; correct?
25	A. He did, back in 2014.

Page 33 May 18, 2021

1 J. SPIVAK, M.D 2 And the condition you're referring to is Ο. 3 the herniation? 4 Α. And the back pain that brought on the 5 need for the decision to go ahead with an MRI. 6 Ο. Does that make it a chronic condition? 7 Α. Not necessarily, no. 8 Do you know if he had a chronic condition Ο. 9 as of 2014? 10 I don't know. Α. 11 Is it fair to say that there's no Ο. 12 evidence anywhere in anything you reviewed to 13 indicate that following this MRI in January of 2014 14 up to the automobile accident of May 26, 2017 that 15 he had any significant pain in his lumbar spine? 16 Α. Can you repeat that question? I'm sorry. 17 Is it fair to say that there is no Q. 18 evidence whatsoever, based upon your review of all of the records that Mr. Christy had any pain in his 19 20 lower back following this MRI of January of 2014 21 until the happening of the automobile accident in May of 2017? 22 23 Other than his report of use potentially Α. 24 of narcotics, then there would be nothing else. 25 And that one note you're referring to, Ο.

Page 34 May 18, 2021

1 J. SPIVAK, M.D 2 that was a note in Dr. Neubardt's chart from September 14, 2020 of a phone call; correct? 3 4 Α. I believe so. 5 Ο. That's the only note that you referred to of all the hundreds, if not thousands of pages that 6 7 talk about prior narcotic use is a phone call note; 8 is that fair to say? 9 Α. Yes. 10 And there's no reference as to if he had Ο. 11 been taking narcotics prior to the date of this 12 accident for what reason he was taking them; is 13 that fair to say? 14 Α. Yes. 15 And, in fact, there's nothing in the Ο. 16 records that you've reviewed that indicate that he 17 was taking narcotic medication specifically for 18 lower back pain; correct? 19 Α. Correct. 20 Q. How does a herniation such as the one 21 identified on this 2014 MRI occur? Disk herniations, I would say most 22 Α. 23 typically occur as a result or part of a 24 degenerative process; although, traumatic 25 incidents, physical activity can cause it to happen
Page 35 May 18, 2021

1 J. SPIVAK, M.D 2 within the degenerative process. And very severe 3 accidents can cause it to happen sort of 4 immediately through a large tear of the disk itself. 5 6 Have you ever had a patient who was Ο. 7 involved in an automobile accident or rear-end 8 automobile accident that you treated for herniated 9 disk? 10 Α. Yes. 11 At any time have you treated a patient Ο. 12 who was rear-ended in an automobile accident and 13 the evidence of a disk herniation did not appear on 14 an initial MRI, but showed up at some time later 15 on? 16 That can happen typically within the Α. 17 first few weeks or so. 18 What about beyond the first few weeks, if Ο. 19 someone had a partially herniated disk and then was 20 in an accident, could that disk herniate even more 21 months after the accident? 22 A disk can always herniate further from Α. 23 time from anything, but that doesn't necessarily 24 make it related. 25 How can you tell if a disk herniates more Ο.

Page 36 May 18, 2021

1	J. SPIVAK, M.D
2	than how it was before an accident, but it's not
3	evident until months after the accident, whether
4	the accident caused that to happen or whether it's
5	part of the degenerative process?
6	MR. OBREGON: Note my objection to form.
7	You can answer.
8	A. I think temporally you look at it to see
9	how close it was to the time of the accident. If
10	it happens a year later, many months later, many
11	years later I don't think you can ascribe it to the
12	accident. If it happens days later, that's a
13	different story. There could be some initially
14	tearing that later goes on to quickly, rapidly
15	herniate.
16	Q. Could a herniation develop three months
17	after a rear-end accident that's not seen within
18	the first month on MRI?
19	A. Again, a herniation can always develop at
20	any time after an accident and after an MRI. That
21	does not make it causally related.
22	Q. But can there a causal relation where
23	someone has a partially herniated disk, like Mr.
24	Christy's shown disk protrusion/herniation in 2014,
25	then he gets into an automobile accident where he's

Page 37 May 18, 2021

1	J. SPIVAK, M.D
2	rear-ended in May of 2017, and then maybe three
3	months later that same disk shows to be herniated
4	even more; could the accident cause that to happen?
5	A. No.
6	Q. Why not?
7	A. Because that's not Mr. Christy's
8	scenario. Mr. Christy's scenario is he had what
9	was described as an inconsequential disk
10	herniation, part of the degenerative process in
11	2014. He did not even have a disk herniation
12	visible in 2017 that had well since been resorbed
13	or the degenerative process had essentially
14	consumed it with further bulging of the disk. And
15	his later herniation many months later is not
16	related to the accident specifically in question.
17	Q. Now, you reviewed the records from the
18	date of the accident, I understand; is that
19	correct?
20	A. I believe I did, yes, from Vassar
21	Brothers Medical Center.
22	Q. And you saw photographs of the damage to
23	Mr. Christy's vehicle from being rear-ended by a
24	tractor trailer; correct?
25	A. I may have. I don't recall.

Page 38 May 18, 2021

٦

1	J. SPIVAK, M.D
2	Q. Well, it says in your report that you
3	reviewed four photographs that were provided to you
4	showing the auto accident damage; right?
5	A. If it says it then I did. It's faster
6	than me finding it on my report.
7	Q. I'm going to share my screen with you and
8	show you a photograph taken immediately following
9	Mr. Christy's car being rear-ended by a tractor
10	trailer. And it's one of the photographs that was
11	provided to you by defense counsel that you say you
12	looked at in your report.
13	Do you see it on my screen, sir, the back
14	of a Honda Civic?
15	A. Yes.
16	Q. And do you see how it's crushed in and
17	the back windshield is blown out and the fender is
18	off?
19	A. Yes.
20	MR. OBREGON: Note my objection to form.
21	Q. Fair to say that this is evidence of a
22	severe impact?
23	MR. OBREGON: Objection to form.
24	A. No, I don't think it's fair to say. It's
25	evidence of an impact, not necessarily severe.

Page 39 May 18, 2021

1 J. SPIVAK, M.D 2 Well, you wouldn't think that a light Ο. 3 impact caused this; would you? 4 MR. OBREGON: Objection to form. 5 It's a Honda Civic, so I think it could. Α. 6 Would you anticipate that if a belted Ο. 7 driver was in the front seat of this vehicle and 8 was hit in the rear by a tractor trailer such that 9 it caused this damage that that could cause some 10 problems to the spine of the driver? 11 MR. OBREGON: Objection to form. 12 Yes, it could. Α. 13 Ο. And would you agree that if the driver of 14 this vehicle had some degenerative disk disease at 15 the time that the tractor trailer rear-ended this 16 vehicle, if he was belted and sitting in the front, 17 that such an impact could aggravate that disk 18 degenerative disease? 19 Α. No, it would cause a muscular lumbar 20 strain or a whiplash to the back, and more likely 21 than that. 2.2 Do you not agree that an impact like this Ο. from a tractor trailer rear-ending a vehicle of a 23 24 belted driver would aggravate any preexisting back 25 injury?

Page 40 May 18, 2021

1 J. SPIVAK, M.D 2 MR. OBREGON: Objection to form. 3 A preexisting back injury, I mean, it Α. 4 could. 5 What about a preexisting back condition Ο. 6 such as the 2014 MRI, would you agree that an 7 impact like this could affect the driver's spine in 8 such a way that it could become more symptomatic? 9 Again, I believe it would be symptomatic Α. 10 based on a muscular strain or whiplash, not based 11 on a degenerative disk. 12 What's your basis for that opinion? Ο. 13 Α. My expert knowledge of over 27 years of 14 being a spine surgeon. 15 Ο. Would you expect there to be any changes 16 in an MRI of the lumbar spine following a rear-end 17 impact such as the one that we're looking at now? There certainly could be. 18 Α. And what would cause that; would it be 19 Ο. 20 the force of the impact that could cause that? 21 Α. Yes. 22 What would you expect to see, if Ο. 23 anything, in a subsequent MRI compared to the 2014 24 in Mr. Christy if an MRI was taken after this accident? 25

Page 41 May 18, 2021

1 J. SPIVAK, M.D 2 Α. If there were structural injury resulting 3 from the accident you might see a fracture, you 4 might see tearing of the ligaments that support the 5 spine. You might see an acute traumatic disk 6 herniation. 7 Q. Anything else like a bulge or further 8 desiccation? 9 Bulge is a degenerative finding. It's Α. 10 really not a traumatic finding. Desiccation, 11 again, not a traumatic finding. It's a 12 degenerative finding. So trauma can't cause a bulge? 13 Ο. 14 Α. Trauma does not cause a bulge. 15 Ο. Could a rear-end accident, such as the 16 one that Mr. Christy had, cause him to be 17 symptomatic in the lumbar spine if prior to the 18 accident he was not symptomatic? 19 Α. Yes. 20 Q. In fact, doesn't the record that you 21 reviewed reveal that to be case, that he went to 22 being symptomatic in his lumbar spine following this accident? 23 24 Α. Yes. 25 Ο. And would you agree that the symptoms

Page 42 May 18, 2021

1 J. SPIVAK, M.D 2 that he expressed in all of the records that you 3 reviewed with regard to pain in his lumbar spine 4 would be causally related to this rear-end accident? 5 6 At least initially, yes. Α. 7 Q. And for how long would you expect it to 8 be causally related? 9 Typically, the symptoms of a lumbar Α. 10 muscular strain last maybe three to six months at 11 the outset. 12 Ο. And then you would expect within six 13 months he would be fine? 14 He would be better, yes. Α. 15 Ο. Would he be fine though without symptoms? 16 Α. Not everybody is fine. Every case is 17 different. 18 Do you have any reason to dispute that 0. 19 the pain that Mr. Christy made complaints of in the 20 lumbar spine area and all the records you reviewed 21 were as a result of this rear-end impact? 22 No, at least not until the herniation. Α. 23 So up until the point where you believe Q. 24 there was evidence of a herniation in the lumbar 25 spine, is it fair to say all that treatment up

Page 43 May 18, 2021

1 J. SPIVAK, M.D 2 until that point you would agree is causally 3 related to this accident? 4 Α. No. I'm not going back to where we were 5 an hour earlier. 6 Well, you have no reason to dispute Ο. 7 causal connection; correct? 8 MR. OBREGON: Objection. 9 I have no known reason, correct. Α. 10 And the only point you get to where you Ο. 11 start to dispute any causal connection is with 12 finding of a herniation at L5-S1 later on after the accident; correct? 13 That's correct. 14 Α. 15 Ο. Now, let's look at the MRI -- well, first 16 of all, there's no dispute that Mr. Christy was consistent with his treatment for his back pain 17 18 following this accident; right? 19 Α. I'm not sure what you mean by consistent. It's not like he had this accident and 20 Ο. 21 then started to get treated a year or so later. 22 It's very consistent from the time of the accident 23 that he continued to report pain stemming from this 24 accident; correct? 25 Α. Yes.

Page 44 May 18, 2021

1	J. SPIVAK, M.D
2	Q. I'm going to show you the emergency room
3	note. And I believe you reviewed this as part of
4	your review; correct, the emergency room note from
5	the date of the accident?
6	A. Yes.
7	Q. Do you see it up on my screen, at the top
8	it says, Vassar Brothers Medical Center admit date,
9	May 26, 2017. Do you see that, Doctor?
10	A. Yes.
11	Q. And do you see where it indicates that on
12	May 26, 2017 at 15:10 EDT, the chief complaint was
13	that he was rear-ended by a tractor trailer at 70
14	miles an hour?
15	A. Yes.
16	Q. Do you see where I've highlighted lower
17	on in the history that he complains of back pain;
18	do you see that?
19	A. Yes.
20	Q. And is it fair to say that this is the
21	very first and only record you have reviewed in
22	this case that indicates back pain from any time of
23	May 26, 2017 or earlier?
24	A. No. We just looked at an MRI report
25	complaining of back pain from 2014. Other than

1 J. SPIVAK, M.D 2 that, yes. 3 Okay. Now, you're aware that he went to Ο. 4 see an orthopedist named Dr. Dassa following the accident? 5 6 Α. Yes. 7 Q. I'm going to share my screen with you 8 again. Do you see this, Doctor, where it says, 9 Gabriel Dassa at the top? 10 Yes, I do. Α. 11 Ο. He's a board certified orthopedic 12 surgeon; correct? 13 Α. That's what the record says. 14 Now, this date is June 13, 2017, about Q. 15 two weeks after the accident; correct? 16 Α. Yes. 17 Q. And do you see here in the highlighted 18 sections where Mr. Christy's evaluated for pain in 19 his lumbar spine status post the motor vehicle 20 accident of May 26, 2017 where he was rear-ended by 21 a tractor trailer? 22 Α. Yes. 23 And you see where Mr. Christy reports to Q. 24 Dr. Dassa that since his accident he's been having 25 persistent pain, burning, numbness, and tingling

Page 46 May 18, 2021

1 J. SPIVAK, M.D radiating down to his extremities? 2 3 Α. Yes. 4 Q. And you see that he denies any prior 5 injuries? 6 Α. Yes. 7 Q. Do you have any reason to dispute the 8 accuracy of the information contained in this 9 paragraph that we are looking at? 10 Α. No. 11 Ο. And then do you see the examination of 12 the lumbosacral spine where Dr. Dassa measures flexion, extension, and so on? 13 14 Α. Yes. 15 Ο. Any reason to dispute his measurements 16 here? 17 Α. No. Then at the end do you see where in the 18 Ο. 19 discussion Dr. Dassa says, the patient was injured 20 on the above date and that the symptoms and 21 findings were directly caused by this accident? 2.2 Yes, I see that. Α. 23 Do you have any reason to disagree with Q. 24 Dr. Dassa's opinion at this point? 25 Α. No.

Page 47 May 18, 2021

1	
1	J. SPIVAK, M.D
2	Q. And indicates for treatment physical
3	therapy and a lumbar spine brace for support and
4	some MRIs; do you see that?
5	A. Yes.
б	Q. He doesn't recommend surgery; correct?
7	A. That's correct.
8	Q. He doesn't recommend epidurals; correct?
9	A. That's correct.
10	Q. Seems to be a reasonable recommendation
11	of treatment in your opinion?
12	A. Yes. I'm not sure I'd agree with
13	bracing, but it's certainly reasonable.
14	Q. Okay. Now, you reviewed the records from
15	Community Primary Care and many of them are noted
16	by Ralph Gargiulo, PA; correct?
17	A. Yes.
18	Q. And do you see them up on your screen
19	here where I have the September 26, 2017 note?
20	A. Yes.
21	Q. And you reviewed all of these visits as
22	part of your review; correct?
23	A. Yes.
24	Q. Do you see then that on September 26,
25	2017, this is a followup. The reason for the

Page 48 May 18, 2021

1 J. SPIVAK, M.D 2 appointment, Workers' Compensation. Date of 3 accident, May 26, 2017; correct? 4 Α. Yes. 5 Ο. And where it indicates the result is an 6 exacerbation of lower back pain; do you see that? 7 Α. Yes. 8 Any reason to dispute that he was there Ο. 9 for a followup from the accident that we're talking 10 about and that he's having low back pain that's been exacerbated from this accident? 11 12 Again, the word exacerbation isn't Α. 13 appropriate, but the low back pain is still associated with that accident. 14 15 Why do you disagree with the word Ο. 16 exacerbation? 17 Α. Because there's no evidence to suggest 18 that at any time immediately beforehand, as you mentioned, that he had low back pain. 19 20 But does this note --Q. 21 He had back pain, but I don't know --Α. 22 exacerbation would imply that it's sort of a chronic condition that comes and goes and that the 23 24 accident brought it about, and there's no evidence 25 to support that.

Page 49 May 18, 2021

٦

1	J. SPIVAK, M.D
2	Q. Well, this is evidence; isn't it? You're
3	looking at records and you've referred before to
4	some notes you saw, the phone call, and that was
5	evidence in your mind of prior narcotic use. Now,
6	we're looking at a note of his Primary Care Group
7	that's referring to him having an exacerbation of
8	low back pain. Isn't this evidence to consider?
9	A. It's certainly all worth considering. I
10	just think the PA is using the word exacerbation
11	incorrectly. That's all.
12	Q. So you disagree with the PA's
13	terminology?
14	A. I would just say resulting in low back
15	pain. Exacerbation of is just not appropriate use
16	there.
17	Q. Well, there's obviously a reason that he
18	chose to use exacerbation; right?
19	A. You would have to ask him. I have no
20	idea.
21	Q. Right. And you take these records when
22	you review them at face value as part of your
23	review, don't you?
24	A. I'm not sure what you mean by at face
25	value. I don't if someone says something that's

Page 50 May 18, 2021

1 J. SPIVAK, M.D 2 incorrect, I don't necessarily take it at any 3 value. 4 Yeah, but you have no independent basis Q. 5 for saying this is incorrect; do you? 6 I'm talking about right now. Α. 7 Q. Right. Do you right now have any 8 independent basis for disputing that Community 9 Primary Care, Mr. Gargiulo is saying that 10 Mr. Christy had back pain that was exacerbated from this accident? 11 12 It's caused by the accident. Exacerbated Α. 13 is the wrong word. That's all I'm trying to say. 14 I don't agree with the word exacerbated, and that 15 won't change. 16 Now, on December 5, 2017 he refers to the Ο. 17 reason for the appointment, the accident of May 26, 18 2017. He's following up. He's in back pain. And 19 he states the pain is getting worse. Do you see 20 that? 21 Α. Yes. 22 Do you have any reason to dispute this? Ο. 23 Α. No. 24 Now, on January 5, 2017 here's a medical Ο. 25 doctor, Chandra Naik. Do you know Dr. Naik?

1	J. SPIVAK, M.D
2	A. No.
3	Q. Do you see it says, Workers'
4	Compensation, date of accident, May 26, 2017, lower
5	back injury?
6	A. Yes.
7	Q. And you have no reason to dispute that
8	the reason for his visit was following up for a
9	lower back injury related to the accident of May
10	26, 2017; correct?
11	A. It says the reason for the visit was for
12	a medication refill.
13	Q. Right, related to a lower back injury for
14	May 26, 2017; right?
15	A. At this point related to a chronic use of
16	medication that maybe isn't appropriately being
17	used, but needs to be refilled or there are
18	consequences to the patient who is on too much
19	narcotics.
20	Q. Okay. I'm not asking for your commentary
21	on what you perhaps think it was going on here.
22	I'm asking your commentary on what the records are
23	indicating that you relied upon on your review,
24	okay.
25	And, specifically, when you reviewed

Page 52 May 18, 2021

1 J. SPIVAK, M.D 2 chart, did you see that he showed up on January 5, 3 2018 for a medication refill for a lower back 4 injury related to the accident of May 26, 2017? 5 Α. Yes. 6 Do you see that Dr. Naik took a social Ο. 7 history; correct? 8 Α. I'm not sure what you mean by social 9 history. 10 Do you see where it says, social history? Ο. 11 Α. Now I see that, yes. 12 And surgical history and hospitalization Ο. 13 and medical history; do you see all of that? 14 Α. Yes. Now, again on March 19, 2018, do you see 15 Ο. 16 that he goes back to the center indicating a 17 chronic pain followup, date of injury, May 26, 2017, chronic pain; do you see that? 18 19 Α. Yes. 20 Q. And do you see he came back on April 9, 21 2018. Again, patient complains of severe pain in 22 right glute down leg, date of incident, May 26, 2017; do you see that? 23 24 Α. Yes. 25 And do you have any recent to dispute Ο.

Page 53 May 18, 2021

1 J. SPIVAK, M.D 2 that he went in April of 2018 to his doctors and 3 complained of pain since the date of the accident? 4 Α. He complained of pain. I'm not sure what 5 you mean by since the date of the accident. Ι 6 think his right glute pain and right leg pain was 7 new. 8 Well, here it says that Workers' Ο. 9 Compensation - date of incident, May 26, 2017, 10 patient complains of severe pain in right glute 11 down leg. Do you see that? 1.2 Α. Yes. 13 Ο. Do you see anything on here to indicate it's something new from something other than the 14 15 automobile accident? 16 Α. No, it's the difference from the prior 17 notes. 18 And do you see in here where it says, 0. 19 patient continues to experience severe pain in the 20 lumbar spine. Which leg, down the right leg --21 probably a typo. He was recently seen by Dr. Rema 22 who's now anticipating using epidural injections. 23 Do you see that? 24 Α. Yes. 25 And is there anything in here to indicate Ο.

Page 54 May 18, 2021

٦

1	J. SPIVAK, M.D
2	that the pain that he's complaining of, the severe
3	pain, is anything other than continuing pain that's
4	gotten worse from the date of this accident?
5	A. There's the new complaint of pain in the
6	right leg. That's all. There is continued
7	additional pain reported.
8	Q. And do you have any reason to dispute
9	that his complaints of pain at this appointment
10	relate to the automobile accident?
11	A. Yes.
12	Q. And what's your basis for that?
13	A. I believe prior to this appointment he
14	had herniated the disk on the right side at L5-S1,
15	which is not related to the accident specifically.
16	Q. When do you think he herniated his disk
17	at L5-S1?
18	A. I believe I would have to look back,
19	but probably between this note and the note before.
20	Q. So between April 9, 2018 and March 9,
21	2018 you think that he herniated a disk?
22	A. Yes.
23	Q. So do you think that his pain that's
24	referred to on March 19th of 2018 that says, under
25	today's visit on date of this note, comes to refill

Page 55 May 18, 2021

1	J. SPIVAK, M.D
2	pain medication for lumbar disk disease resulting
3	from Workers' Compensation injury from May 26,
4	2017, you think that somehow something changed
5	where then in 2018, a month later, April 9th in
6	that month he had something new happen, a new
7	herniation and that made his pain worse completely
8	unrelated to the accident?
9	A. The right leg pain is completely
10	unrelated to the accident.
11	Q. And the disk herniation that you're
12	saying must have happened between these two visits
13	sometime in March to April of 2018 was completely
14	unrelated to the accident as well?
15	A. Yes.
16	Q. And none of the sequela from the impact
17	caused his spine to further herniate a disk in the
18	lumbar spine?
19	A. Not in this case, no.
20	Q. And he did have a herniation back in
21	2014; right, at L5-S1?
22	A. Yes.
23	Q. And then you're saying this is a new
24	herniation in 2018, not the same one?
25	A. That's correct.

Page 56 May 18, 2021

J. SPIVAK, M.D 1 2 Same disk though; right? Ο. 3 Same disk level, that's correct. Α. 4 So you're saying sometime between 2014 Q. 5 and 2018 the disk moved back into place and then 6 moved back out? 7 Α. No. That's not how it works. How does it work? 8 Ο. 9 Between 2014 this very small reportedly Α. 10 inconsequential disk herniation essentially 11 resolved. What happens is the disk can fortify and 12 strengthen. The small protruded fragment can dry 13 out and shrink. And the disk degeneration 14 progresses so that by 2017 when the injury MRI is 15 done there's no visible disk herniation whatsoever. 16 This is two separate unrelated disk herniations. 17 Q. Did you compare the two films? 18 Α. Which films? Of 2017 and 2018. 19 Ο. 20 Α. Yes. 21 And did you compare the films of 2014 Ο. with 2017 and 2018? 22 23 Α. No. 24 Let's look at the 2017 MRI for a moment. Ο. 25 All right, Doctor, I have up on the screen MRI from

Page 57 May 18, 2021

1 J. SPIVAK, M.D 2 Vassar Brothers Medical Center. It says Nuvance 3 Health at the top. July 28, 2017. Do you see 4 that? 5 Yes, but I also want to point out that Α. we're not looking at MRIs. We're looking at MRI 6 7 reports. 8 Okay. Looking at the MRI report. Ο. And 9 previously we were looking at the MRI report for 10 2014; right? 11 Α. Yes. You just said earlier let's compare 12 the MRIs, but we're not comparing MRIs. That's --13 Ο. Right, we're comparing MRI reports. 14 Thank you for the clarification. 15 On here it says, patient was hit by a 16 truck, May 26, 2017. Clinical history. Complains 17 of legs going numb, weakness in legs, and pain in 18 lower back; right? 19 Α. Yes. 20 Now, you're saying the legs going numb, Q. the weakness in his legs has nothing to do with the 21 accident? 22 23 No, I'm not saying that at all. Α. 24 So would you agree that his complaints at Ο. 25 the time of this MRI of his legs going numb and

DEITZ Court Reporting... A Lexitas Company 800-678-0166

Page 58 May 18, 2021

1 J. SPIVAK, M.D 2 weakness in his legs and pain in his lower back 3 were caused by the accident? 4 Α. Yes. 5 Ο. And how does that anatomically work that 6 his legs are going numb and he has weakness in his 7 legs as a result of this accident? 8 Something may have irritated the nerves Α. 9 even back, I think, in 2014. The report may have 10 indicated -- we're losing track, that he had 11 foraminal stenosis, and that certainly could have 12 been temporally sort of instantly exacerbated, and 13 that's an exacerbation of the stenosis causing a 14 new symptom. The symptom of legs going numb and 15 weakness in the leq. So this would be an exacerbation of 16 Ο. 17 spinal stenosis is what would cause the legs to go 18 numb and the weakness in his legs? It would be a transient increase in the 19 Α. 20 foraminal stenosis at L5-S1 based on the whiplash 21 to the back causing some irritation of the nerves 22 and the subsequent symptoms. Would it mean the disk is in connection 23 Ο. 24 at all with the thecal sac or the nerves? 25 The foraminal is on the side. It's Α.

Page 59 May 18, 2021

1 J. SPIVAK, M.D 2 unrelated to the thecal sac. Simply the exiting 3 nerves. 4 Now, here where it says, severe pain in Q. 5 the right glute down leg on the April 9, 2018, you're saying this is a new finding; right? 6 7 Α. Absolutely. But in the MRI where he's talking about 8 Ο. 9 complaints in his legs, going numb, and weakness, 10 and pain in his back, that is connected; right, to the accident? 11 12 Α. Yes. 13 Ο. Now, when we look at this MRI report from 14 July of 2017 there's some new findings on this 15 report from the 2014 one; correct? 16 Α. There are new reported findings, correct. 17 Q. New reported findings. 18 Do you have any reason to dispute these 19 new reported findings? 20 Α. Yes. 21 Ο. And what is your basis for disputing 22 these reported findings? My review of the images, so I agree with 23 Α. 24 my findings, whatever they would be, whether or not 25 these findings say what they say.

Page 60 May 18, 2021

1 J. SPIVAK, M.D 2 What were your findings from your review Ο. 3 of this MRI in 2017? 4 Α. I'm going to quote from my notes. Ι 5 reviewed the images of the study which show a broad 6 disk bulge at L5-S1 with retrolisthesis resulting 7 in right greater than left recess and foraminal There was also moderate stenosis at 8 narrowing. 9 L3-4, and mild stenosis at L4-5 with moderate 10 bilateral facet arthrosis at L3-4, L4-5, and L5-S1. 11 So what specifically do you disagree with Ο. 12 from the radiologist's findings in this MRI report 13 of July 2017? Please scroll down for a minute. 14 Α. 15 I actually believe there is a stenosis at 16 L3-4, at least according to my review, and mild at L4-5. And I don't really see a discussion -- maybe 17 18 lower down there is of foraminal -- of facet 19 arthritis. 20 And you think there's facet arthritis in Ο. 21 your review? 2.2 Yes. Α. But that's not indicated on here? 23 Q. 24 Not that I can see unless you can point Α. 25 it out.

Page 61 May 18, 2021

1	J. SPIVAK, M.D
2	Q. What about the findings at L1-L2 and
3	L2-L3 where these are new findings now, according
4	to this MRI report, from the 2014; would you agree
5	with that?
6	A. I would have to look at the study again.
7	I didn't comment on those levels in my review.
8	Q. Okay. So, first, let's look at this and
9	then I'll pull up the 2014 MRI. So here on the
10	July 2017 MRI following the accident, a few months
11	after the accident, it has a broad based disk bulge
12	at L1-L2. Do you see that?
13	A. Yes.
14	Q. Do you dispute that finding?
15	A. I'd have to review the images to know
16	whether I agree or not with it.
17	Q. As you sit here today, do you have any
18	reason to dispute it?
19	A. No.
20	Q. And at L2-L3, moderate disk bulge causing
21	mild to moderate bilateral foraminal narrowing and
22	mild spinal stenosis, that's a new finding as well;
23	right?
24	A. It's a new reported finding compared to
25	the 2014 MRI. Agreeing that it's a new finding

Page 62 May 18, 2021

1 J. SPIVAK, M.D 2 would mean that I agree with the report, and I have 3 to review the images to let you know if I actually 4 agree with the report or not. 5 Right. And when you wrote in your chart Ο. 6 that the 2017 MRI is reported as unchanged from 7 2014, you would have to agree now that that is not 8 accurate, that it is changed; right? 9 Say that again. Α. 10 Ο. I'm putting on the screen page ten of 11 your report. 12 Α. Yes. 13 Ο. Do you see on the highlight where it 14 says, the MRI is reported as unchanged from a prior 15 2014 scan; do you see that? 16 Α. I do see that. 17 Would you agree that that's not accurate, Q. 18 that it is changed, the MRI report from 2017 is 19 changed from the 2014? 20 Α. I think there's a typo there. I don't 21 know how I could have said that because at the time 22 of writing that report I'd never seen the scan or 23 report from 2014. 24 So it's either a typo, or in any event, Ο. 25 it's not accurate; correct? Your statement in your

Page 63 May 18, 2021

1 J. SPIVAK, M.D 2 report that the MRI is reported as unchanged from a 3 prior 2014 scan, that's not accurate? I would have to see the MRI -- can you go 4 Α. 5 back to the 2017 MRI report? 6 Ο. Yes, I can. 7 So we just looked at how there's new 8 findings at least at L1-L2 and L2-L3 from 2014; 9 right, these are new findings? 10 Could you scroll down? I want to answer Α. 11 your question. 12 It's the slight progression since the 13 prior study, that's from the impression. 14 Q. Okay. 15 That was the basis of that statement, I Α. 16 assume. 17 All right, but your statement is not Q. 18 about a slight progression. Your statement in your 19 report says, the MRI is reported as unchanged from 20 a prior 2014 scan; correct? 21 That's what it says, correct. Α. 22 And that is not accurate; correct? Ο. 23 It's poorly worded. I would give you Α. 24 that. 25 Other than poorly worded, it is not Ο.

1 J. SPIVAK, M.D 2 accurate; correct? 3 It's poorly worded. Α. 4 It's wrong; right, Doctor? It's not just Q. 5 poorly worded. It's wrong? 6 MR. OBREGON: Objection. 7 Α. Similarly changed is essentially 8 unchanged. So I think it's poorly worded. Ι 9 wouldn't say it's wrong. 10 You won't concede that your statement Ο. 11 that the MRI is reported as unchanged from a prior 12 2014 scan is wrong? You won't concede that? 13 Α. I think it's poorly worded. 14 Okay. And, Doctor, you're specifically Q. 15 hired to focus in on areas of whether there are 16 changes or not from different MRIs; correct? 17 I'm specifically hired to review the Α. No. 18 case in its entirety, not -- not for what you just 19 specifically said. 20 Are you aware as an orthopedic surgeon Q. 21 who's hired to come in as an expert and give 22 testimony as far as what is causally related and 23 not, that a statement by you in your report saying 24 that an MRI is reported as unchanged from a prior 25 2014 scan carries the weight of anybody reading it

Page 65 May 18, 2021

1 J. SPIVAK, M.D 2 to believe that there is no change from the 2014 to 3 the 2017 MRI reports? It's simply missing the word, essentially 4 Α. 5 unchanged, which would make it correct. That's all 6 I'm saying. And, in fact, if it does change with more degenerative changes between 2014 and 2017 it 7 8 actually helps the defense, so I'm sorry I worded 9 it incorrectly, but it should say as essentially 10 I'm not sure why you're harping on it. unchanged. 11 Okay. Either way there were new findings Ο. 12 in his spine as reported in the 2017 MRI report 13 from the 2014 report; will you agree with that? 14 Α. Could you go to the bottom of the report, 15 Could you go to the 2014 report, please? please? 16 Ο. Yes, I can. I'm now sharing with you the 17 2014 MRI. 18 Α. Could you go to the bottom of the report, 19 please? 20 Yes. Q. 21 Okay. Can you go back? Α. 22 While we're still on this report I just Ο. 23 want to clarify. 24 In this report at L1-L2 and L2-L3 this 25 report is saying that at those levels they're not

Page 66 May 18, 2021

1	J. SPIVAK, M.D
2	finding any significant foraminal stenosis and
3	they're not identifying any disk bulges; would you
4	agree with that?
5	A. It's not reported. That's correct.
6	Q. Okay. And in the MRI, which I'm turning
7	to now of 2017, following the accident, at L1-L2
8	it's a mild broad based disk bulge and mild
9	bilateral foraminal narrowing and mild spinal
10	stenosis, that is a new finding in this report
11	following the accident that did not exist as being
12	reported in 2014; would you agree with that?
13	A. Yes.
14	Q. And would you agree that the finding at
15	L2-L3 of a moderate disk bulge causing mild to
16	moderate bilateral foraminal narrowing and mild
17	spinal stenosis is a new finding being reported
18	after this accident from the MRI report taken in
19	2014?
20	A. Yes.
21	Q. Now, in 2017 they're stating that there
22	is a mild broad based disk. It doesn't say whether
23	it's a bulge or a herniation or anything here. It
24	just says, mild broad based disk. Do you
25	understand what that means?

1	J. SPIVAK, M.D
2	A. Yes.
3	Q. What does that mean?
4	A. I understand you're right. It's
5	missing a description on that. That's what I
6	understand.
7	Q. Okay. And it could be a profusion as
8	existed in 2014 that's not indicated; correct?
9	A. I believe you mean protrusion.
10	Q. I'm sorry, protrusion, yes.
11	A. Yes.
12	Q. Which would be a herniation; correct?
13	A. If the radiologist meant to use the word
14	protrusion that would be another word for a type of
15	herniation.
16	Q. Is there evidence that you see from this
17	report that the protrusion or herniation as we
18	discussed in 2014 at L5-S1 has resolved on its own
19	and that there's no longer a herniation at L5-S1?
20	A. From the report, no.
21	Q. Then if we go to the report in 2018, I'm
22	now sharing with you the May 14, 2018 report
23	ordered by Dr. Rema, clinical history, motor
24	vehicle accident, May 26, 2017, has had two recent
25	epidurals with

Page 68 May 18, 2021

1 J. SPIVAK, M.D 2 Excuse me, you're reading and I'm seeing Α. 3 you. You're not showing me anything. 4 I apologize. I thought I was sharing the Q. 5 screen. 6 Okay. Now I have up on the screen, 7 again, from the same radiology facility at Vassar 8 Brothers, May 14, 2018. This was ordered by Dr. 9 Rema. Do you know Dr. Rema? 10 No, I don't. Α. 11 Ο. You reviewed his records though; correct, 12 as part of your analysis in this case? 13 Α. Yes, I believe so. 14 Do you see here that he's ordering this Q. 15 report on May 14, 2018, and he gives a clinical 16 history as in the reason for this report as a motor 17 vehicle accident, May 26, 2017. Do you see that? 18 Α. Yes. 19 Ο. Does that indicate to you that Dr. Rema 20 is ordering this MRI in connection with treatment 21 he has been rendering to Mr. Christy for back pain 22 from a motor vehicle accident stemming from May 26, 2017?23 24 I can't read Dr. Rema's mind. That would Α. 25 be a question for him.

Page 69 May 18, 2021

1	J. SPIVAK, M.D
2	Q. Well, reading this report, when you look
3	at the clinical history, which we did back in 2014,
4	which you said you relied upon in determining that
5	he had back pain at that time, isn't it equally
6	fair to rely upon this clinical history when you're
7	reviewing records to say that Dr. Rema is sending
8	him for an MRI in connection with a motor vehicle
9	accident of May 26, 2017?
10	MR. OBREGON: Objection to form.
11	A. No. He's sending him there because of
12	the reason for exam, which was radiculopathy, and
13	the clinical history, which is right-sided
14	sciatica. Pain into toes. That's a new finding
15	why he was sent for this new updated MRI.
16	The clinical history of the motor vehicle
17	accident, I can't speak to why Dr. Rema put that in
18	there or not or what his opinions are. That would
19	be something he would speak to, not me.
20	Q. When you're reviewing the records in Mr.
21	Christy's case I notice that some of the things you
22	take at face value that you read, such as the fact
23	that there was a report of prior narcotic use, you
24	take that at face value in forming your opinion,
25	but then you see something like here, which would

Page 70 May 18, 2021

1 J. SPIVAK, M.D normally be taken at face value when a clinical 2 3 history of motor vehicle accident of May 26, 2017, and you say you're not so sure about that; correct? 4 5 Α. No, I'm not ignoring the history of the 6 motor vehicle accident --7 MR. OBREGON: Objection to form. 8 Α. -- I'm simply stating that it's part of 9 his overall history, but the reason for the exam is 10 the new right-sided radiculopathy and sciatica. Now, at L1-L2, L2-L3, these findings are 11 Ο. 12 generally reported to be the same as the July 2017 13 MRI; correct? 14 Α. Yes. 15 Ο. Now, there appears to be a report of a disk bulge at L3-L4. Do you see that? 16 17 Α. Yes. 18 Ο. Do you know how it is that that bulge 19 could be reported as seen on this MRI, but not 20 reported as seen in the prior two? 21 Α. It could either be just simply a 22 progression of the degenerative process, most 23 likely, or it could be the same as the previous one 24 read by a different radiologist. I don't know. Ι haven't scrolled down to know who read it or it 25
Page 71 May 18, 2021

1 J. SPIVAK, M.D 2 could just be something that is a matter of opinion 3 that's correct or incorrect. 4 Again, at L5 there's a mild disk bulge Q. 5 being reported here. Do you see that? 6 Α. Yes. 7 Q. And then at L5-S1 it says, there's a 8 right-sided paracentral moderate sized disk 9 herniation. Do you see that? 10 Α. Yes. 11 Ο. This is referring to the same disk that 12 was reported as being herniated in 2014; right? Same disk level, that's correct. 13 Α. 14 Same general area, right, maybe a little Q. 15 more to the right here as reported in 2014? 16 Α. No, it's focal and to the right. It's a 17 different herniation. 18 Ο. And what do you mean when you say, a different herniation; it's in a different area? 19 20 Α. It's a new acute herniation on the right 21 side causing this new sciatica how ever many more months closer to -- nine/ten months later. 2.2 How did this new herniation, as you call 23 Q. 24 it, develop? 25 MR. OBREGON: Objection to form.

Page 72 May 18, 2021

1	J. SPIVAK, M.D
2	A. That's what we call a theological
3	question. That's a question asking for an answer
4	like I'm God that I would be able to give the
5	answer. Herniations, as I said before, more
6	commonly than not develop as part of the
7	degenerative process without any accident or
8	incident.
9	Q. Would you agree, Doctor, that an accident
10	or incident can move forward the degenerative
11	process?
12	A. No.
13	Q. Would you agree, Doctor, that an accident
14	or an incident can cause sequela that can
15	ultimately cause a herniation in the lumbar spine?
16	A. I don't even understand the question.
17	What do you mean by sequela?
18	Q. Now, before this MRI we know that
19	Mr. Christy was undergoing a lot of treatment for
20	the accident; right?
21	A. Yes.
22	Q. We know that he had physical therapy;
23	correct?
24	A. Yes.
25	Q. Could this herniation have been related

Page 73 May 18, 2021

1 J. SPIVAK, M.D 2 to --3 By the way, when you said for the Α. 4 accident, it was for the pain, but, yes. 5 So the physical therapy was treating him Ο. 6 for his pain from the automobile accident; correct? At that point it's possible that it was 7 Α. 8 just -- I would say yes. 9 Okay. You'll concede that? Ο. 10 It's not a concession. It's a yes. Α. 11 Okay. And during physical therapy, could Ο. 12 that cause the L5-S1 disk to herniate? 13 Α. Anything can cause a disk to herniate. Α 14 sneeze commonly causes a disk to herniate. Bearing 15 down in the bathroom causes a disk to herniate. Т 16 can't say for certain that any one thing does not 17 cause -- did not cause a disk to herniate. 18 Okay. So put it another way, you have no Ο. 19 reason definitively to say that his physical 20 therapy didn't result in this herniation, do you? 21 Yes, I do. Α. 22 And how can you say that? Ο. 23 It would be a case report. Α. It's 24 essentially an event that does not happen. 25 So physical therapy cannot cause a Ο.

1 J. SPIVAK, M.D herniation of a disk? 2 3 Α. I just told you. I didn't say it cannot. 4 It just almost routinely forever does not. It's much more common that he had a bad sneeze one 5 6 morning and herniated his disk. That would be 7 much, much, much more common. 8 Okay. So it's your opinion that there's Ο. 9 no way the physical therapy that he was undergoing from this accident could have caused this 10 herniation; is that correct? 11 1.2 MR. OBREGON: Objection. 13 Α. No. My opinion is there's nothing to 14 suggest that any physical therapy caused this disk 15 herniation. 16 Ο. Right, but is it your opinion -- is it reasonable that it could have occurred --17 18 Α. No. -- during the physical therapy? 19 Ο. It's that uncommon of an event that it's 20 Α. 21 not a reasonable conclusion. 22 What about the epidural injections, Ο. 23 injecting into the area of the L5-S1, could that 24 cause a disk to herniate? 25 Α. No.

Page 75 May 18, 2021

1	J. SPIVAK, M.D
2	Q. What about injections of Bupivacaine in
3	the area of the L5-S1, could that lead to a
4	herniation?
5	A. No.
6	Q. What about a patient compensating for
7	back pain in the manner of walking or moving to try
8	and compensate for the pain, could that cause a
9	herniation?
10	A. No.
11	Q. What about if Mr. Christy was moving his
12	body in a certain way to try and compensate for his
13	pain either in the performance of his work or his
14	activities of daily living, could that cause the
15	L5-S1 to herniate?
16	A. No.
17	Q. But a sneeze could?
18	A. Yes.
19	Q. I'm going to go back. We left off at
20	April 9, 2018 with his Primary Care. And then you
21	saw after April 9, 2018 he went back on May 9,
22	2018. You saw that?
23	A. Yes.
24	Q. You see under today's visit it says, has
25	WC injury. Do you know what that refers to?

1 J. SPIVAK, M.D 2 Yes. Α. 3 Ο. Workers' Compensation, meaning on-the-job 4 injury? 5 Α. Yes. 6 And you're aware he was on the job at the Ο. 7 time of this automobile accident and that's what 8 it's referring to? 9 Α. Yes. 10 So it's saying here, has WC injury and Ο. 11 has been seeing Dr. Rema with epidural injections 12 and recently a short course of oral steroids. He 13 continues to be in pain. Scheduled for MRI by Dr. 14 Rema. Do you see that? 15 Α. Yes. 16 Ο. Is it reasonable from reading this note 17 of May 9, 2018 to presume that this is why Dr. Rema 18 referred him for the 2018 MRI? 19 MR. OBREGON: Objection to form. You can 20 answer. 21 Α. What's the this? This is why? I don't 22 know what you mean by that. The statement in today's visit of this 23 Q. 24 note of May 9, 2018 that he has a Workers' 25 Compensation injury for which he's been seeing Dr.

Page 77 May 18, 2021

1	J. SPIVAK, M.D
2	Rema with epidural injections and a short course of
3	steroids, he continues to be in pain, and he's
4	scheduled for an MRI by Dr. Rema.
5	By reading that, does that indicate to
6	you that that is why he was going for the MRI
7	because of his continued pain despite Dr. Rema's
8	treatment for this accident?
9	A. No. We know from the note prior that he
10	was sent for the MRI for the new sciatica in the
11	right lower extremity. The new right leg pain.
12	Q. Okay. He goes back on June 12, 2018.
13	Again, it indicates a Workers' Compensation injury,
14	May 26, 2017. Had back surgery May 31st. Had
15	recent surgery due to Workers' Compensation injury
16	of the lumbar area to fix a sciatic condition.
17	Comes for refill of pain meds. Do you see that?
18	A. Yes.
19	Q. And you dispute this statement that his
20	surgery was due to his Workers' Compensation injury
21	of the lumbar area?
22	A. I'm not disputing the statement. This is
23	a statement of a physician assistant of a medical
24	doctor. This is not an orthopedist physician's
25	assistant even. And the statement simply could be

Page 78 May 18, 2021

1	J. SPIVAK, M.D
2	referring to the insurance that everybody is
3	getting paid for, which is Workers' Compensation.
4	And it was this PA's opinion that this is there,
5	but that does not imply that this PA actually has
6	the opinion that the need for surgery was based on
7	a Workers' Comp injury or the motor vehicle
8	accident earlier because that would be completely
9	overstepping the PA's fund of knowledge. So you're
10	harping on this really doesn't make sense to me.
11	MR. SMILEY: Can we pause for two
12	minutes, please. I have to address something
13	very quickly.
14	MR. OBREGON: Sure.
15	(Brief recess was taken.)
16	Q. You see he went on July 17, 2018 and the
17	reason for the appointment is also followup for
18	back pain, date of incident, May 26, 2017?
19	A. Yes.
20	Q. Do you see that he goes regularly to this
21	facility monthly to be checked out all the way
22	through at least October of 2019, and that in every
23	one of these notes it references that his back
24	injury is related to the car accident; correct?
25	A. It doesn't relate it. It just mentions

Page 79 May 18, 2021

1	J. SPIVAK, M.D
2	the fact that he had a Workers' Comp injury and was
3	there for followup and refill of pain medicine
4	because this seems to be the facility that would
5	provide Mr. Christy his pain medicine.
6	Q. Now, you also reviewed records of his
7	orthopedic surgeon; correct?
8	A. Who are you referring to?
9	Q. Dr. Neubardt.
10	A. Yes.
11	Q. And are you aware that Dr. Neubardt has
12	opined that the need for the surgeries was as a
13	result of the car accident?
14	A. I don't know of that opinion.
15	Q. Well, you reviewed his records; right?
16	A. Yes.
17	Q. And did you review them to see whether or
18	not the surgeon who actually performed the
19	procedures believed them to be a result of the
20	accident in this case?
21	A. I thought you were referring to some
22	narrative report later on where he actually had a
23	legal opinion, so I don't know what you're
24	specifically referring to, but I'm happy to have
25	you refer me to it.

Page 80 May 18, 2021

1	
1	J. SPIVAK, M.D
2	Q. Okay. So I have up on the screen a note
3	that you were provided in the records that you were
4	given from Dr. Neubardt. It's dated July 2018. Do
5	you see this here? It has his name at the top and
6	it says copy.
7	A. Yes.
8	Q. It says, diagnosis, status post
9	microlumbar diskectomy. Surgery was performed on
10	May 31, 2018. Restrictions "patient is able to
11	work four hours per day due to past spinal surgery
12	due to an injury he sustained at work on May 26,
13	2017." And it's signed by Dr. Neubardt who
14	performed the surgery. Do you see that?
15	A. Yes.
16	Q. And you reviewed this note as part of
17	your review in this case; correct?
18	A. I assume I did.
19	Q. And so you see here that Dr. Neubardt
20	certainly connects and puts in writing that the
21	surgery of the microlumbar diskectomy was due to
22	the injury he sustained on May 26, 2017; right?
23	A. We both read it just now. I see what's
24	written.
25	Q. You didn't comment on this in your report

Page 81 May 18, 2021

1 J. SPIVAK, M.D 2 at all, did you? 3 Α. No, I did not. 4 Do you disagree with Dr. Neubardt --Q. 5 Α. Yes. 6 -- when he says that it was sustained Ο. 7 because of this? 8 He sustained an injury, but I don't think Α. 9 that's the cause of the herniation which required 10 the surgery. And depending on what Dr. Neubardt 11 really means by that, and I'd have to ask him, I 12 might disagree with that. 13 Ο. Do you know Dr. Neubardt? 14 Α. No. 15 Ο. Do you know of his reputation at all? 16 Α. Yes. And what do you know of his reputation? 17 Q. 18 I choose not to answer that question. Α. 19 Ο. Well, do you know him to be of a bad 20 reputation? I know of a mixed reputation. And that's 21 Α. 22 all I'm going to say about that, so move on. Well, respectfully, Doctor, I'm allowed 23 Q. 24 to ask you questions. You can't tell me to move 25 on.

Page 82 May 18, 2021

1 J. SPIVAK, M.D Α. 2 And I don't have to answer. 3 Ο. Well, you kind of do. 4 I'm not going to disparage another Α. 5 surgeon, so I'm not going to say anything more. 6 Ο. Do you think that you're in a better 7 position having reviewed the records and spending some time at once with Mr. Christy to determine 8 9 whether or not a surgery performed was caused by 10 his accident more so than the surgeon who was 11 treating him for his condition and actually did the 12 surgery? 13 Α. I'm in a much better position to make 14 that opinion having reviewed everything than Dr. 15 Neubardt had on that day when he wrote the note. 16 Ο. Okay. So you disagree with him; correct? 17 Depending on what he's actually saying I Α. 18 probably disagree with him. 19 Ο. Well, it says "past spinal surgery due to 20 an injury he sustained at work on May 26, 2017." 21 That's pretty clear; right? You just read it. I don't know what he 22 Α. 23 really means by that. I'd have to ask him or you 24 could ask him. 25 Well, reading this document it says that Ο.

1 J. SPIVAK, M.D 2 3 It doesn't say it's causally related. Α. 4 It's not a real legal type opinion document, so I 5 don't know what you mean. 6 Ο. Okay. 7 Α. I can't really comment any further. 8 Did you review the reports of the Ο. 9 Workers' Compensation independent medical exam 10 doctors? 11 Α. I may have some of them, yes. I don't 12 recall. 13 Ο. And you don't do Workers' Compensation 14 evaluations, do you? 15 Α. I don't think I -- no, I do -- I quess 16 the answer to your question is no. I don't really 17 know what that means, but no. 18 Well, what it means is when you fill out Ο. 19 forms for Workers' Compensation and you are asked 20 to evaluate records and propose treatment and give 21 an opinion on whether you think the treatment is 22 causally connected to the workplace injury and 23 should be approved by Workers' Compensation to pay 24 for that treatment; are you aware of that? 25 Α. Yes.

Page 84 May 18, 2021

1 J. SPIVAK, M.D 2 And do you do that? Ο. 3 Α. No. Only for my own patients. 4 Right. So you're aware that there are Q. 5 doctors that are hired specifically on behalf of 6 the Workers' Compensation Board to evaluate 7 treatment and proposed treatment and to render an 8 opinion as to whether or not a workplace accident was causally connected to that treatment? You're 9 10 aware of that; correct? 11 Α. Correct. 12 MR. OBREGON: Objection to form. And you were given the reports of two 13 Ο. 14 doctors that saw Mr. Christy on multiple occasions 15 and rendered reports; correct? 16 Α. Yes. Ο. 17 One was Dr. Hausmann and the other was 18 Dr. Sawyer. Do you know them? 19 Α. I know Dr. Sawyer from the past. I don't 20 know Dr. Hausmann. 21 Ο. So I'm going to share my screen with you. 22 This is a report recently of December 3, 2020 from 23 Steven Hausmann, M.D. Do you see this on your 24 screen? 25 Α. Yes.

Page 85 May 18, 2021

1	J. SPIVAK, M.D
2	Q. And you reviewed this as part of your
3	analysis of this case that you were hired for;
4	correct?
5	A. Yes.
6	Q. And you see that in addition to December
7	3, 2020 that Dr. Hausmann examined Mr. Christy on
8	July 5th of 2020 and on February 2nd of 2020? You
9	see that; right?
10	A. Yes.
11	Q. And he did prior reports relating to
12	those evaluations that you were provided with and
13	you reviewed as well; correct?
14	A. Yes.
15	Q. So he evaluated him three times and he
16	reviews the prior medical history and he lists all
17	the review of records in each report similar to the
18	way you reviewed a list of your review of all the
19	records; right?
20	A. He lists what records he reviewed, yes.
21	I don't know about the word all, but yes.
22	Q. In a similar way to you he was asked to
23	evaluate Mr. Christy with an actual exam, to review
24	all the reports, and to render an opinion on
25	causation; correct?

Page 86 May 18, 2021

1	J. SPIVAK, M.D
2	A. I don't know that this would be for
3	causation, but he was rendering an opinion.
4	Workers' Compensation evaluations I thought
5	typically were to whether further treatment
6	requested were appropriate, but I could be wrong.
7	Q. So let me scroll down. All right.
8	And do you see under diagnosis where it
9	says, work related low back injury, status post
10	lumbar laminectomy and recent lumbar decompression
11	and fusion under diagnosis. Do you see that?
12	A. Yes.
13	Q. Do you see where it says, where I've
14	highlighted, relative to the lumbar spine he would
15	have a marked temporary partial degree of
16	disability. If he returned to work he would
17	require a sedentary job, no lifting over ten
18	pounds, no repetitive bending or stooping. He
19	could stand and walk two to three hours per day and
20	sit the remainder of the time he's not working. Do
21	you see that?
22	A. Yes.
23	Q. Do you see where it then says, the above
24	diagnosed conditions are causally related to the
25	date of the injury for this claim. Do you see

1 J. SPIVAK, M.D 2 that? 3 Yes. Α. 4 And you disagree with Dr. Hausmann; Q. 5 right? 6 Α. Yes. 7 Q. You think he's wrong in his opinion; 8 correct? 9 I disagree. I don't think it's a fair Α. 10 characterization to say he's wrong. Okay. Well, you have your opinion, he 11 Ο. 12 has his opinion; right? 13 Α. And they're different, that's correct. 14 Doesn't mean you're right and he's wrong Q. 15 or he's right and you're wrong; correct? 16 Α. That's correct. MR. OBREGON: Objection to form. 17 18 You're just doctors that disagree, have Ο. 19 different opinions; right? 20 Α. We have different opinions. 21 Ο. Okay. But he's an orthopedist; right? 22 I don't know him to be a spine specialist Α. 23 I know Dr. Sawyer is not a spine in any way. 24 specialist and has never operated on a spine as far 25 as I know, but I don't know Dr. Hausmann's record

Page 88 May 18, 2021

1	J. SPIVAK, M.D
2	and career as an orthopedic surgeon, what he does.
3	I would be a very bad person to opine on somebody's
4	hip or knee problem, but somebody who does hips and
5	knees would be a very bad person to opine on
6	somebody's spine problem.
7	Q. Okay. So you're saying to really opine
8	on Mr. Christy's case you need to be a surgeon, and
9	if you're a board certified orthopedist alone that
10	the opinion wouldn't be as credible as yours on a
11	causation issue like this?
12	A. I believe I would have more expertise on
13	an opinion regarding a spinal issue than an
14	orthopedic surgeon who's board certified who has
15	never really taken care of any spine patient in an
16	operative fashion.
17	Q. Would you agree that
18	A. And I don't know, Dr. Hausmann may be a
19	spine surgeon. I'm not disputing that. I just
20	don't know.
21	Q. Okay. All right. Now, I'm bringing you
22	to Dr. Sawyer's IME evaluation of October 9, 2018.
23	Do you see that on the screen?
24	A. Yes.
25	Q. And he's a board certified orthopedic

Page 89 May 18, 2021

1 J. SPIVAK, M.D 2 surgeon. Do you see that? 3 Α. Yes. 4 Q. And he evaluated him on May 1, 2018. Do 5 you see that? 6 Α. Yes. 7 Q. And also again October 2018? 8 Α. Yes. 9 And you reviewed this record as part of Ο. 10 your review; correct? 11 Α. Yes. 12 Ο. And similar to you, he examined him, he took a history, and he reviewed records, he lists a 13 lot of the records that he reviewed, and then he 14 15 forms an impression and opinion. 16 In his causal relationship, which I have 17 for you, he says "the above diagnosis is causally 18 related to the work-related injury of May 26, 2017." Do you see that? 19 20 Α. Yes. 21 Ο. And the diagnosis he's referring to is 22 lumbar sprain with aggravation of congenital spinal 23 stenosis, status post L5-S1 microlumbar diskectomy 24 and aggravation of low back pain postoperatively. 25 Do you see that?

1 J. SPIVAK, M.D 2 Α. Yes. 3 Ο. So he's an orthopedic surgeon that has 4 causally connected this first surgery, because this 5 was before the second one, to this accident; 6 correct? 7 Α. In his opinion, correct. 8 Ο. It's his opinion? 9 Α. Yes. 10 And you didn't reference this in your Ο. 11 report that this was his finding; correct? 12 Α. Excuse me? 13 Ο. You didn't reference his finding in your 14 report, did you? 15 Α. This is not part of his medical care. 16 It's listed as something reviewed, but it's not part of his active medical care to be listed. 17 18 But it was part of your review to review Ο. 19 this record; right? 20 It's in my record review, yes. Α. 21 Ο. And conceivably there's a reason that you 22 charge money to review this record prior to 23 rendering your report; right? 24 MR. OBREGON: Objection to form. 25 Could you repeat that question about me Α.

1 J. SPIVAK, M.D 2 charging money? 3 Ο. Yes. So you charge money, you get paid 4 for your review of medical records as part of your 5 medical exam service; right? 6 Α. That's correct. 7 Q. So you get paid to review this report; 8 right? 9 Yes. Α. 10 So there's obviously a reason that you Ο. 11 charge money to review this report, you feel that 12 it's somehow connected with your work in evaluating the claim; right? 13 I review all the records that are sent to 14 Α. 15 I don't decide what records to be sent to me me. 16 or not. 17 So, so far we can agree that you disagree Q. with Dr. Hausmann and Dr. Sawyer, both who reviewed 18 19 medical records, examined Mr. Christy, and give an 20 opinion that all the treatment and surgeries are 21 causally connected to the accident? You disagree 22 with them; right? 23 MR. OBREGON: Objection to form. 24 That's correct. Α. 25 Did you review the report of Dr. Jeffrey Ο.

1 J. SPIVAK, M.D 2 Perry? 3 I'm sorry, from the beginning, that Α. Yes. 4 was another report that was sent to me last week. 5 Do you know who Dr. Perry is? Ο. 6 Yes, I know him very well. Α. 7 Q. Okay. And do you have an opinion as to 8 him and his reputation in his area of practice? 9 Α. No. 10 Do you find him to be a credible Ο. 11 physician? 12 Credible, yes. Α. 13 Ο. And you reviewed his report, so you're 14 aware that he reviewed all of the records that you 15 reviewed; correct? 16 Α. Yes. 17 Q. And he also evaluated Mr. Christy; 18 correct? 19 Α. You have to scroll and show me, but that 20 would not surprise me. 21 Ο. Okay. He does his range of motion? 22 Α. Yes. 23 Q. And let's look at his impression. That 24 Mr. Christy was in his usual state of health until 25 May 26, 2017, at which time he was in a motor

Page 93 May 18, 2021

1	J. SPIVAK, M.D
2	vehicle collision sustaining significant and
3	permanent injuries to his lumbar spine, which has
4	required a course of physical therapy as well as
5	narcotic analgesics and opioids as well as a
6	diskectomy, as well as a lumbar fusion. Do you see
7	where he says that?
8	A. Yes.
9	Q. Then do you see where I've highlighted he
10	says, "it can be stated within a reasonable amount
11	of medical certainty that the competent producing
12	cause of his current condition and the treatment
13	that he has received thus far with respect to
14	bodily injuries to his neck, shoulders, and low
15	back are as a direct consequence of the injuries
16	sustained in the accident of May 26, 2017." Do you
17	see that?
18	A. Yes.
19	Q. So now he is the third surgeon third
20	physician's report that we've looked at who
21	causally connects all of the treatment and
22	procedures to the accident; correct?
23	MR. OBREGON: Objection to form.
24	A. I'm not with each of the others I have
25	disagreed with their conclusion. I don't know that

Page 94 May 18, 2021

1 J. SPIVAK, M.D 2 they're direct causally related as much as this. 3 This is directly causally relating it and I 4 disagree with the conclusion. 5 Ο. Okay. And you're right and he's wrong or are you saying you just differ? 6 7 Α. I come to a different conclusion. 8 Now, you've testified before today under Ο. 9 oath like this; correct? 10 Α. Yes. 11 Approximately how many times have you Ο. 12 testified under oath at a deposition prior to 13 today? 14 At a deposition that isn't related to my Α. 15 own medical malpractice? 16 No, any time that you were questioned Ο. 17 under oath at a deposition. Approximately, how 18 many times has that happened? 19 Α. It's happened twice for IMEs. This is 20 the second time. And probably for other unrelated 21 work in my medical practice, four or five times. 22 Ο. And I understand that you have had 23 lawsuits brought against you for malpractice prior 24 to today? 25 Α. Yes.

Page 95 May 18, 2021

1 J. SPIVAK, M.D 2 Were you deposed in connection with any Ο. 3 of those lawsuits? Α. 4 I just said about four or five of them. 5 And are any of those cases still pending? Q. б Yes, one case is pending. Α. 7 Q. What's the name of the plaintiff in that 8 case? 9 Bruce Schiffrin, S-C-H-I-F-F-R-I-N, I Α. 10 believe. 11 Q. Where is that case pending? 12 Α. I don't know. 13 Q. Do you know what county it's in? 14 Α. No. 15 Ο. Have you been deposed in that case? 16 Α. No. Have all of the other cases been 17 Q. 18 resolved? 19 Α. Yes. 20 Have all of them been dismissed as they Q. 21 relate to you? 22 No, there's been one settlement. Α. 23 Q. And what case was that where there was a 24 settlement? 25 I'm trying to remember the name. Α.

Page 96 May 18, 2021

1 J. SPIVAK, M.D 2 Sometimes you choose to put names out of your head 3 on purpose. I can get it for you, but I don't know 4 the name offhand. 5 Ο. Was it Spiegel; was that the name? б There was a Phyllis Siegel, which I was Α. 7 dropped from. Spiegel, no. 8 Ο. Okay. 9 It's an Israeli name. I just don't Α. 10 remember. I can find it for you. I'm not hiding 11 anything. 12 Okay. And, generally speaking, did that Ο. 13 case involve a spinal surgery that you performed? 14 No, actually. I performed three spinal Α. 15 surgeries on that case, but he was ultimately 16 paralyzed by a pain specialist trying a procedure, 17 and they sued the pain specialist who didn't have a 18 deep enough pocket so they then chose to sue me and 19 NYU as well. 20 Did you consent to the settlement of the Q. 21 cause of action against you? I don't have the choice of consenting or 22 Α. not. NYU had the choice. 23 24 And NYU settled the claim brought against Ο. 25 you in that case?

1 J. SPIVAK, M.D 2 Α. Yes. 3 Ο. Did you testify in that case? 4 Α. Yes. 5 MR. SMILEY: Counsel, we would just ask 6 for that case to be identified, please. And 7 we'll follow up in writing. 8 MR. OBREGON: Thank you. 9 DOCUMENT/INFORMATION REQUESTED: 10 Doctor, approximately how many Ο. 11 independent medical exams do you perform on behalf 12 of defense law firms on a given year? 13 Α. I would say somewhere between 70 and 80. 14 Maybe 75. 15 Ο. And I saw your billing statement. Ιt 16 indicates that for an IME your base rate is \$7,000, which includes evaluation of materials and an 17 18 evaluation of the plaintiff; is that correct? 19 Α. Yes. 20 So that's a \$7,000 fee you charge? Q. 21 Α. Yes. 22 So is it fair to say that if you do 75, Ο. 23 approximately a year, at \$7,000 that you make 24 approximately \$525,000 a year performing 25 evaluations of injured plaintiffs and writing

Page 98 May 18, 2021

1 J. SPIVAK, M.D reports for defense law firms? 2 3 Α. Yes. 4 Q. What percentage of your practice do you 5 devote to performing IMEs? 6 Time wise I spend two hours a week doing Α. 7 it. The remainder of the week is my clinical 8 practice. In this specific case, am I correct then 9 Ο. 10 that you would have charged Mr. Obregon's law firm 11 \$7,000 to examine Mr. Christy, review the records, 12 and write a report? 13 Α. Yes. 14 And that, I believe, you sent an Q. 15 additional bill for additional records reviewed in 16 March for an additional \$2,375; does that sound 17 right? 18 That may very well be. If it takes more Α. 19 than two hours it's an extra charge. 20 So fair to say that just on this case Q. 21 alone the work you were hired to do you've billed 22 out Mr. Obregon's firm \$9,375? 23 Α. Yes. 24 And with the fee that I paid to you to Ο. 25 appear today for a two-hour deposition, you've

1 J. SPIVAK, M.D 2 generated \$14,675 as a result of work in connection 3 with this case? 4 Α. Yes. 5 Ο. Will you be sending any additional bills 6 to Mr. Obregon for any time or review of records 7 you spend in preparation for today's deposition? 8 Α. No. 9 Ο. How much time did you spend examining 10 Mr. Christy? 11 Α. I don't recall specifically. 12 Ο. Did you make a note of it? 13 Α. No. Where did you examine him? 14 Q. 15 Α. In an office in Manhattan on 2nd Avenue. 16 The day that you examined him, were you Ο. 17 performing any other examinations of injured 18 plaintiffs as well? 19 Α. I don't recall. If I did, it was one 20 more. It's either one or two. 21 Ο. Generally, how long do you spend in your 22 physical examination of injured plaintiffs? 23 Α. Typically, the visit will take, depending 24 on how complex it is, somewhere between half an hour and 50 minutes. 25

Page 100 May 18, 2021

1	J. SPIVAK, M.D
2	Q. And do you know with Mr. Christy if it
3	was closer to the half hour or closer to the 50
4	minutes that you spent in your exam of him?
5	A. He had a lot of kind of history to go
6	through, so I would assume it's somewhere in the
7	middle of that, but I don't recall specifically.
8	Q. Was anybody present with you and
9	Mr. Christy during the examination?
10	A. Probably not. Not directly with us. I
11	have a secretary who leaves when the claimant is
12	all set to go back to the hospital office.
13	Q. Now, you say you took handwritten notes
14	of the examination?
15	A. Yes.
16	Q. And you still have those notes?
17	A. Yes, I do.
18	Q. Would you please provide a copy of those
19	to Mr. Obregon?
20	A. Sure.
21	Q. And we'd request a copy of the notes of
22	that examination, please.
23	A. It's a single page, but I would be happy
24	to provide it to you.
25	MR. OBREGON: We ask that any requests be

Page 101 May 18, 2021

J. SPIVAK, M.D 1 made in writing and we'll respond 2 3 appropriately. 4 MR. SMILEY: Thank you. 5 Randi, if you could index the request for б me, please. 7 DOCUMENT/INFORMATION REQUESTED: Did you review the medical records before 8 Ο. 9 your physical examination of Mr. Christy? 10 Yes. Α. 11 Ο. And did you write any of your report 12 before you started to examine him in person? 13 Α. No. 14 Do you have anybody assist you in the Q. 15 preparation of your reports? 16 Α. Yes. 17 Q. Who assists you? 18 In the preparation of my reports, no, Α. 19 nobody assists me. 20 Do you have anybody assist you in your Q. examination? 21 22 Α. No. 23 Do you actually type up the reports Q. 24 yourself? 25 No, I dictate it. It gets sent, I Α.

Page 102 May 18, 2021

1 J. SPIVAK, M.D 2 believe, to India where it gets transcribed and 3 then I edit the report. 4 The section where you talk about the Q. 5 records reviewed, do you dictate all of that or do 6 you have a staff member that does that section for 7 you? I dictate it. 8 Α. 9 Ο. So everything contained within your 10 report was actually dictated by you? 11 Α. Yes. 12 Ο. And everything contained in your report 13 was proofread by you for accuracy? 14 Α. Yes. 15 Ο. Do you know Adam Bender, a physician? 16 Α. I know the name, but I don't know that I 17 know him personally by any experience, no. Do you agree that the surgical procedures 18 Ο. performed by Dr. Neubardt, specifically the 19 20 laminectomy and the fusion, were medically 21 reasonable procedures to perform? 2.2 Α. Yes. If Dr. Bender -- withdrawn. 23 Q. 24 Dr. Bender, a neurologist, was also hired 25 by Mr. Obregon's firm to evaluate Mr. Christy, and

Page 103 May 18, 2021

J. SPIVAK, M.D 1 2 he said that in his report that the medical need 3 for lumbar fusion and the laminectomy is 4 questionable. Do you agree with that statement? 5 Α. I'm not sure what he's questioning, so I 6 don't agree or disagree. You would have to ask 7 him. 8 Do you know Dr. Sinha? Does that name Ο. 9 sounds familiar? 10 Α. The first name. I think it's Rubin? 11 Ο. 12 No, I don't. I take it back. The Sinha Α. 13 I know is a financial analyst. So I don't know a Dr. Sinha. 14 15 Ο. You said in your report that he should be 16 able to work full time; is that true? 17 Α. If that's what I said in my report then 18 it's true. 19 Ο. What type of work can he do full time in 20 your opinion? 21 Α. I believe he can do his job full time. 22 Do you know what's involved in his job? Ο. I know it involved a fair amount of 23 Α. 24 driving and sales and looking and assessing 25 situations.

Page 104 May 18, 2021

1	J. SPIVAK, M.D
2	Q. And is it your opinion that he's not in
3	pain even though he states that he is?
4	A. No, that's not my opinion.
5	Q. Do you have any reason to dispute
6	Mr. Christy's statement that he is still in
7	significant pain in his lumbar spine?
8	A. Do I have reason to dispute it, yes, I
9	have reason to dispute, but I don't dispute it.
10	Q. You don't dispute it?
11	A. You asked me if I had reason to dispute
12	it. There is reason to dispute it.
13	Q. Do you dispute it?
14	A. I don't dispute it or not dispute it.
15	The reason to dispute it would be, again, drug
16	seeking behavior because nobody is taking him off
17	of narcotics. So he needs to be in pain to get
18	more narcotics, but I'm not disputing anything. I
19	don't know him well enough and haven't spent enough
20	time with him to dispute it or not dispute it.
21	Q. Are you aware that he stopped working at
22	his job due to pain?
23	A. Yes.
24	MR. OBREGON: Objection.
25	A. That's his claim that he stopped working.

Page 105 May 18, 2021

1 J. SPIVAK, M.D 2 I don't have a reason why. 3 Are you aware that he reduced his hours Ο. 4 of work to part time for a period of time due to 5 pain? 6 Α. Yes. 7 Q. And are you aware that he was fired because he wasn't able to work full time? 8 9 Α. I believe that's in the note somewhere. 10 MR. OBREGON: Objection to form. 11 And do you believe that the reason he's Ο. 12 not working is so that he can get narcotic medication? 13 14 Α. I think he claims pain potentially No. because of that. I think he's maybe not working 15 16 until this lawsuit gets settled. 17 What is your basis for saying that? Q. 18 Because that's a common motivation of Α. 19 plaintiffs in lawsuits. If they work and do full 20 time they can't get -- achieve the same benefits of 21 a lawsuit. That's a possible motivation for him 22 not to work. That's all. I'm not saying it is. 23 I'm just saying it's possible. 24 And do you think that he had the Ο. 25 laminectomy surgery because of his lawsuit?

Page 106 May 18, 2021

1	
1	J. SPIVAK, M.D
2	A. No, he had the laminectomy surgery
3	because of an acute disk herniation which occurred
4	nine months after his accident.
5	Q. Do you believe he was in significant pain
б	such that he chose to undergo the laminectomy?
7	A. Yes.
8	Q. And what about the lumbar fusion, do you
9	agree that he was in significant enough pain to
10	undergo the lumbar fusion?
11	A. I believe so.
12	Q. And do you think he was able to work full
13	time before the laminectomy despite
14	A. I didn't know him beforehand. I can't
15	really comment on that.
16	Q. So prior to your examination you don't
17	have an opinion as to whether his inability to work
18	from the date of the accident up until your
19	examination was connected to pain from this
20	accident; do you?
21	MR. OBREGON: Objection to form.
22	A. Can you repeat the question?
23	Q. Sure. You're aware that he limited his
24	work hours and that he was unable to work full time
25	as he claims due to the pain in his back from this
1 J. SPIVAK, M.D 2 accident; correct? 3 Α. Yes. 4 Q. Do you dispute that he was unable to work 5 due to pain from his accident? 6 Α. No. 7 How much longer are you planning because 8 I do -- I did plan two hours for this. 9 Yep, we're at 12:31. I'm just wrapping Ο. 10 it up, Doctor. 11 Doctor, have you ever performed a lumbar 12 fusion on one of your patients following an accident where they were rear-ended by another 13 14 vehicle? 15 Α. I can't think of one specifically, but I 16 certainly may have. In your review of all of the records 17 Q. 18 including Mr. Christy's deposition and your questioning of him, did you come across any 19 reference to any other accidents that Mr. Christy 20 21 had either before or after the motor vehicle 22 accident of May 26, 2017? I don't believe so. I don't recall any 23 Α. 24 specific ones. 25 And is it fair to say that you don't have Ο.

Page 108 May 18, 2021

J. SPIVAK, M.D 1 2 a belief that he had sustained an injury to his 3 back from some unknown accident unrelated to the 4 May 26, 2017 car accident? 5 MR. OBREGON: Objection. б A. I had no information that would suggest 7 that. I thank you for your time. I have no 8 Q. 9 further questions for you, Doctor. 10 MR. OBREGON: Thank you, Doctor. 11 Α. My pleasure. 12 (Time noted: 12:33 p.m.) 13 14 15 16 JEFFREY MICHAEL SPIVAK, M.D. 17 18 19 20 Subscribed and sworn to before me 21 this _____ day of _____ 20__. 22 23 NOTARY PUBLIC 24 25

Your comprehensive plaintiff-loyal settlement planning firm. Negotiation and mediation support, lien resolution and structured settlement plans.

A podcast for lawyers and aspiring lawyers hosted by Andrew J. Smiley, Esq.

SmartAdvocate[®]

A fully-integrated case management system designed exclusively for personal injury and mass tort litigation practice.

A prominent provider of information and analytics solutions tailored for legal, regulatory, and business experts. Offerings include legal research databases, insights, and news.

Attorney operated Medicare, Medicaid, ERISA and other healthcare lien resolution, and MSA allocation firm. Precision resolves liens so that trial attorneys can focus on the task at hand: winning the case.

NAM (National Arbitration and Mediation) is consistently recognized by the legal community for its superb customer service and exceptional panel of arbitrators and mediators.

A full service lien resolution company that comes at no cost to law firms and is reducing liens for clients by an average of over 50%.

Provides managed IT services to customers, including proactive support, live monitoring, management and maintenance for their systems.

The attorney's comprehensive resource for structured settlement annuities, consulting and negotiation services.

A team of award-winning economists and analysts that provides high-quality economic consulting services in a wide variety of litigated matters.

Offers an array of services including local and national court reporting, medical record retrieval, process service, registered agent services and legal talent outsourcing.

Steno offers unrivaled court reporting services combined with purpose-built technology. Built by legal and tech experts who believed that firms deserve first-class service, clients enjoy white glove service, concierge care and a customer-first approach that is revolutionizing court reporting.

Empowering lawyers in analyzing various legal documents and accelerating fact findings, conducting legal research and auto-drafting legal memos, and automating key workflows in personal injury.

Assists attorneys in all 50 states with expert assistance in preparing, filing, and serving appeals in any state or federal appellate court nationwide and several international tribunals.

Professional liability insurance that helps protect law firms with 1-9 attorneys, including attorneys billing less than 26 hours per week.

Offers a wide range of financial products and services while striving to create a one-of-a-kind banking experience grounded in relationships, nurtured through service, and measured by results.

Providing medical experts; medical record retrieval; summaries, chronologies & demands by physicians; and medical cost reports by testifying life care planners.

Trust accounting and banking solutions for law firms. It is designed with attorney insights - for lawyers, by lawyers - and is a no-cost, cloudbased platform for those managing solo and small law firms.

Your record retrieval experts: offering flat fee pricing, fast turnaround, live tracking, full control over custodial charges, e-authorization, different user permission levels, and more!

A highly credentialed group of engineers, architects, scientists and fire investigators who assist in disputes and litigation through investigations, reports and testimony.

Providing physician assistance in reducing, organizing and reviewing digital files.

The leading expert witness service offering custom expert recruiting and high-touch consulting in every specialty.

Hart Settlement Group's focus centers around assisting attorneys as well as individuals and their families with the evaluation design and negotiation of structured settlements.

VOCATIONAL & REHABILITATION SERVICES

Providing objective vocational evaluations, life care plans, and loss of household services evaluation; and will testify credibly & confidently regarding rehabilitation processes, needs, and resources.

The #1 mobile client engagement software for law firms who care about clients, the bottom line & firm growth.

Court reporting and videography services since 1989, as well as litigation support, online document management and protected file storage.

America's leading medical exhibit specialist offering products such as Animations, Interactive Presentations and Timelines, 3-D Models and Exhibit Boards.

> Judgment Enforcement Law Offices of LAURENCE J. SASS

Helping NY attorneys recover on judgments for their clients against uninsured and defaulted defendants by using innovative investigative and legal strategies and dogged persistence.

More than just a case management system designed exclusively for plaintiff personal injury law firms, and allows you to take control of your practice from intake to closure and beyond.

We are a medical professional organization that serves law firms and attorneys. We are medical eyes and ears at Independent Medical Exams and we provide medical case reviews with chronologies.

A boutique, full service structured settlement firm that provides web-based settlement calculators for the exclusive use its clients.

With over 40 years of experience in the industry, we understand the needs of lawyers. We provide law firms with leads and resources to reach new heights of success.

Earn CLE credits around the world. In addition to customized CLE programming, programs offer cultural immersion and local community engagement, creating memorable experiences for lawyers and non-lawyers alike.

Providing concise summaries of all torts decisions from the 1st and 2nd Departments and Court of Appeal every week by email, their website, or the NYTW ANYWHERE app.

The nation's largest online deposition bank, exclusively for plaintiff lawyers.
